Lately, I have been noticing that most police departments are using CRT in thier cars to get information. What digital modes are they using, and what is needed to decode this mode?

Thanks,
RC

well.hmm. all depends if you are in canada or the US. if you are in British Columbia. they are using CDPD. that is encrypted data over a analog cell freq. you can hear it. but can't decode it yet. I will be taking to one of the radio techs soont hat installed them to see if any new info has arose. I am not sure about the US though.

This is a 16 channel base/mobile programmable scanner which covers VHF low, VHF high, UHF and T band. It is in excellent working order and comes with telescoping antenna, AC wall wart, and original box and manual. There is a small bit of "sticky tape" residue on the bottom of the scanner, but that is the only cosmetic defect. Features one button weather channel access, individual channel lock out, and priority channel monitoring. Price is FIRM at $25.00 plus shipping for 4 pounds from zip 84404, and payment must be received within 10 days. David, R8500@aol.com.

BOSTON MED STUDENT "TRAINED ASSASSIN" SHOOTS TWO MEN IN THEIR SLEEP

Slaying suspect ordered held without bail
BU medical student pleads not guilty

By Farah Stockman, Globe Staff, 3/8/2001

He was just a few months away from being a doctor. But the Boston University medical student bragged about being trained as an assassin by the Israeli military, and on Friday morning crept into an apartment and methodically shot two men in their sleep, prosecutors said yesterday.

Still wearing green hospital scrubs and shielding his face from television cameras with a white lab coat, Daniel Mason, 35, pleaded not guilty yesterday in West Roxbury District Court to charges he murdered Michael Lenz, 25, and severely wounded Gene Yazgur, 28. A judge ordered him held without bail after prosecutors told the court Mason had threatened to kill Yazgur, who was pressuring him to pay $118,000 in a court settlement awarded after Mason attacked Yazgur in 1997 during a traffic dispute.

Yazgur, a computer engineer, was wounded in the head, chest, and legs. He is in a coma at Boston Medical Center, the same hospital where Mason was training to become a doctor. Lenz, Yazgur's roommate, a graduate student from Minnesota, died of three shots to the head.

Robert Jubinville, Mason's lawyer, said Mason has been on medication, which could become a significant factor in the case. ''I am exploring what medication he is on and what it is for,'' Jubinville said. Shocked BU students described Mason as a private, extremely religious man who gave out tickets to temple during Jewish holidays.

But before entering medical school in 1994, prosecutors said, the student from Worcester had spent five years in a special commando unit of the Israeli military. Mason told friends he had been ''specially trained to carry out assassinations,'' and evidence found in his apartment was ''consistent with that claim,'' Suffolk Assistant District Attorney Josh Wall said.

Mason told a friend he would kill Yazgur hours after receiving a court order on Thursday directing him to start paying the $118,000, Wall said. Yazgur's lawyer also was allegedly threatened. ''He made statements that they were not going to receive the money,'' Wall said yesterday.

''His threat was, `I'll kill them first.'''

According to Wall, Mason borrowed a black knit hat, took a 9mm handgun he'd had purchased in 1992, and drove to Yazgur's Jamaica Plain apartment around 5:30 a.m. Friday. He allegedly shot Lenz in the temple as he slept in a room stacked with books of poetry. Then he allegedly entered Yazgur's bedroom and shot him through the chin. When Yazgur woke and tried to flee,Mason stopped him with shots to the chest. Then as Yazgur lay on the floor, Mason shot him in each leg, expertly breaking each femur, Wall said.

Before leaving the apartment, Mason turned his gun on a dog Yazgur had brought back with him from a trip to Alaska. Wall alleged that after the shooting, Mason also tried to arrange a false alibi, asking a friend to tell people he had been at home that morning. He also told a friend: ''Don't worry about the apartment. They won't find anything. It's clean,'' according to Wall.

Mason's mother and father sat rigidly during the court hearing near the defendant's two brothers, who wore white shirts and yarmulkes. After the 1997 attack, Mason was convicted of assault and battery and placed on probation. Several months later, he had a violent argument with another person in Brighton District Court while waiting to see his probation officer, said a source familiar with the current case.

Mason was arrested Monday at Boston Medical Center while working with patients under doctors' supervision, according to BU officials, who added that the school was unaware of his past conviction. Mason was due to begin a pediatrics rotation at North Shore Children's Hospital on March 13. Because of Mason's military background, police took extreme precautions before his arrest, not releasing the name of the hospital where Yazgur was recovering out of fear for his security and sending a police car to the house of Jefferson Boone, Yazgur's lawyer in the civil case. Boone said the future doctor would have had 20 years to repay the $118,000 debt, with 12 percent annual interest.

But Boone said Mason swore ''You won't see a penny'' on the day the judge awarded the settlement. Lenz was a graduate student at the University of Massachusetts at Boston who dreamed of publishing his own poetry, friends said. He had just moved to Boston this fall from Paynesville, Minn. His body was returned yesterday to the farming town of 2,000, where a funeral was scheduled for tomorrow.

Yazgur, who moved to Brookline from the Soviet Union as a teenager, loves rock-climbing, dogs, and parties, his friends said. The night before the shooting, Yazgur had stayed up late, drinking cocktails with Lenz and a downstairs neighbor. Thoughts of the settlement were far from his mind, friends said. ''He didn't expect to see any of that money,'' said a friend who asked not to be identified. ''But he didn't expect that guy to come after him either.''

Anne Barnard and John Ellement of the Globe Staff contributed to this report. This story ran on page 1 of the Boston Globe on 3/8/2001.

© Copyright 2001 Globe Newspaper Company.

--

When have you read a news story more sensational, shocking and compelling then this? Did you notice the date? March 8, 2001. Yet you haven't read about this in your paper. Think if you can about the dozens of stories from around the country that have appeared in your newspaper since March 8, 2001 that are but a fraction as interesting as this. What is it that has kept this story from spreading across the nation? What has kept this story from becoming the talk of the country?

Here is something even more astonishing, this story has not even appeared in Boston's other newspaper the Herald! Go ahead; enter "Daniel Mason" into the search engine of the Boston Herald's archives. You will return nothing in your search. Enter the name of Mason's attorney and you will bring up a few articles but none about Mason. Yes the "nice Jewish boy" has a prominent Boston attorney defending him and still the Herald has not printed a story about this shocking murder case. Isn't that the way a certain "religious", "ethnic" group in America that seems to have a strangle hold on the government in Washington D.C. which it uses to siphon off over $6billion every year for Israel would also like to have it?

Daniel Mason is the "heart" and "soul" of the Jewish people. Daniel Mason is the King of the Jews. If you don't pony up $6billion every year for Israel the Jews will stick their thumbs into your eyes. If you don't give in after that they'll sneak into your house at night and fire bullets into you in such a way that you will die as Michael Lenz did and you will suffer as Gene Yazgur has.

Are you going to read about this in your "newspaper"? Are you going to see endless stories-or even one story-about Daniel Mason, the Israeli assassin in Boston on your TV? No, because the Jews own the media in America (http://natvan.com/who-rules-america ) and they'll stick their thumbs into your eyes before they let you see Daniel Mason, the "nice Jewish boy" from Boston as he really is.

Want to know something even more astonishing? Daniel Mason is not going to spend the rest of his life in a Massachusetts prison. He will likely get a hung a jury and be released and within 48hrs of his release he will be in Israel before the prosecutor can file for a new trial and get Daniel Mason back into custody, and that's the last that some of the Boston public (not the Herald's readership) will ever hear about the Israeli assassin from Boston, the "nice Jewish boy" Daniel Mason.

If he is convicted the Jews will work tirelessly to appeal his case spreading favors and money throughout the judiciary until they can get Daniel Mason free on appeal pending a retrial and then he'll flee for Israel and that will be the last anyone will hear about him.

At least Americans won't hear about him. The Palestinian children will certainly know about Daniel Mason. They will feel Daniel Mason's thumbs in their eyes. They will feel bullets fired from Daniel Mason's American M-16 shatter their bones.

## 18. What's a good book on trunk mobile radio

"We think that there is a very serious threat of additional problems now," Ashcroft said, adding: "Frankly, as the United States responds, that threat may escalate."

One small step to take in preparation for any possible future terrorist attack is to be better equipped with regards to communications.

Early warnings and the dissemination of information can be critical. The PA-SitRep [Emergency] Situation Report mailing list is a valuable tool that is free and can be used by anyone with e-mail and or a digital cell phone.

Posts to the list only pertain to major emergency situation throughout the State of Pennsylvania and the list traffic is extremely low volume. Posting protocol mandates a brief summary at the beginning of the message under 100 characters. This protocol caters to the use of digital cell phones and alphanumeric pagers. Users of cell phones and text pagers (as well as those on the list with regular PC e-mail) will receive the emergency traffic posted to the list within seconds. Several subscriber to the PA-SitRep e-mail list contacted me off the list after the Sept 11 attacks and said that the notification to their cell phones was the first news they received of the unfolding tragic events.

For information on how to use your digital cell phone as a text pager, visit the following address:
http://www.pa-sitrep.com/cell.htm

As a subscriber to PA-SitRep, you may post emergency situation reports to the list, but all posts must comply with the posting protocol and messages are limited to emergency situation reports regarding weather emergencies, natural disasters, environmental disasters, civil disturbances, threats and acts of terrorism, major fires, manhunts, and Amateur Radio Emergency Net activations.

For more information on the PA-SitRep mail list please visit the following address:
http://www.pa-sitrep.com/pasitrep.htm

To Subscribe:
http://pa-sitrep.com/mailman/listinfo/pa_pa-sitrep.com

Thanks very much and we'll look forward to your participation.

## 21. ScanStar Plus Update

Newsgroup: rec.radio.scanner
Date: 2001-10-01 17:23:58 UTC
From: Zippy <haroldso@athenet.net>
Message-ID: <trh9tbfq7t7cfe@corp.supernews.com>
Source record: 59172

Hello,

I am running ScanStar Plus version 6.43. I never updated the software and now would like to. The folks at ScanStar do not support their "old" products, (bought in 98) and call it a "legacy." The problem I am having with the software is it is not "Y2K" compliant. Any database that I try to enter into the scan list that was generated after Jan 1, 2000 causes an error code to generate. I then have to change the year on my computer to 1999 and redo my scan list.

I thought maybe there was a patch for this that came out before ScanStar stopped supporting this software. If someone happens to have downloaded the patch or updates religiously, and still has it, it would be great if I could get a copy from you. I like the software, just don't think I want to fork over another $140 for their "new and improved" version of the software.

You might try modifying an old CB radio. You could try shorting out one or more of the capacitors or inductances with ones of different capacitance or inductance respectively, and testing the resulting transmission frequencies with a frequency counter. Once you are in the ball park you could fine tune the right inductance. You may find, though, that CB &/or ham radios provide a good enough way to broadcast your frustrations to the world in general.

## 24. Win92 v0.27 Trunking Question (PRO-92 scanner)

Newsgroup: rec.radio.scanner
Date: 2001-10-01 20:04:28 UTC
From: Jeff Woertz <jwoertz@bergeys.com>
Message-ID: <trhj371k7m0e1a@corp.supernews.com>
Source record: 59175

Hello-

I have a Radio Shack Pro-92 scanner.......

In Win92 v 0.27, why does one need to name the trunked talkgroup channels (BOTTOM RIGHT), when the channels show up automatically once a trunked frequency is scanned? In other words, if I scan a trunked frequency, I can see the talkgroup numbers changing. But the talkgroups aren't even programmed into my scanner. They come up automatically. So why would I need to keep track of them in Win92? I also noticed that this version of Win92 doesn't save the names of these talkgroups. I'll type them in, and then they'll be gone. What am I missing here?

Thanks!

I didn't read anything nor hear anything about this article which is referred to below, in the news, but I'm going to offer my two cents for anyone who cares to listen.

I don't give a rats ass if you're Jewish, Christian, Muslim, Catholic, Buddhist, etc..
If you kill someone, that should NOT make the rest of that particular sect guilty of the same sin. There have been leaders of different faiths busted for theft, molestation, prostitution, etc. People who are supposed to set an example for others to follow.
A person's background means little. Be they black, white, Asian, Indian, etc., it doesn't matter. A murderer is a murderer and so on. Murder and other crimes know no background, race, sex, etc., nor cares. PEOPLE commit crimes, not color and religion. Just like GUNS. They don't shoot themselves. A PERSON pulls the trigger in most cases (except the freak accident cases). ALL of us have those in our groups who are guilty.

I know Jewish people who wouldn't harm a fly and bust their asses daily just to keep food on the table, same with Catholics and so on. Black and Whites too.They would also give you their last dime if you were truly in need. It isn't fair to put ALL on trial for the sake of the few. I don't like crime anymore than anyone else. IF someone kills, they should be punished. I don't care what color or background they are. We need to stop profiling the WHOLE of every race and background and concentrate on getting rid of those of society who create problems for the rest of the world. ONLY after we get rid of the diseased few thousand, can the millions live in peace. Yes, it is strange isn't it? A few thousand make things bad for the millions on earth who try to do what is right. Quit feeling sorry for those who mean us no good. Quit giving them the luxuries of home most of us bust our ass working to afford. They go to jail and live with Gyms, TV, Law Library, Internet, and medical coverage not to mention meals and a roof over their heads. Instead of classifying all for the sake of one. Think about that ONE who now gets all the amenities YOU bust your ass to afford, IF you can! ALL at tax payers expense. WE PAY THEM for their misdeeds with rewards. THAT is wrong.

A bad cop doesn't make the majority bad. A bad biker doesn't make the rest bad. A bad preacher doesn't make the rest bad. A bad trucker doesn't make the rest bad. A bad doctor doesn't make the rest bad. A firefighter who turns to arson for the thrill of a call doesn't speak for the rest of them. Let us QUIT classifying groups for the sake of one who does wrong.

As for being extremely religious, that doesn't cut any ice for anyone. AS I SAID, preachers and so on go astray. I've known people raised in supposedly good Christian homes. They didn't have a "Christian" outcome. Same with

Jewish and Catholic. People like sheep, DO go astray from the "TRUE" doctrines taught by that particular religion.

The next time someone is accused of murder, does it really matter if black or white? Jewish, Catholic, Christian, etc.? NO. The dead person is still as dead and the perpetrator should still be held accountable.

So, all the Blacks are guilty because one kills? All the whites are guilty because of one? ALL the Indians? The Jews? The Muslims? NO..... WE ALL have those among us who are not rational and do sick things against society. Some have spineless leaders who tend to suck people in to their sick way of thinking. To get the "followers" to do that which they themselves usually haven't got the balls to do.

ANY classification of a group, race or background based on the commission of a crime by ONE is unfair to the rest. Regardless of who you are, put yourself in that group being falsely labeled. Because at some point, YOU ARE! How does it feel? Not very good, does it? Think about it before you openly profile a persons "background" - again.
Be angry as hell at the person doing the crime. No one blames you for that. I certainly wouldn't. But don't blame ALL for the crime(s) of one.

My two cents.....

I would be suspiscious of the BNC connector and its connection to the
first RF stage. It is not uncommon for the connection from the BNC
connector to the first RF stage to break due to fatigue over time.

There are any number of other possible causes, but another quick
checkpoint would be to see if the mixing oscillator for the 150mhz
band has stopped functioning. If other ranges appear to be working
correctly that's where I would begin to look.

Ender

For starters, if you're going to be profiting, you could be accused of running a business without a license. Second, I can go to http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/index.hts and get all of the same information for free. As long as I know the lat-longs for my home or zip code (which is easy to obtain through the Internet or better yet a GPS unit), I can easily use its lat-long search links to get all of the freqs within whatever radius I want to use and for any specific or all allocations.

It really does work wonders. Now for your offer to create frequency lists for a nominal fee. It wouldn't be so bad if you were only asking for - but not require - small donations in return for services rendered or something like that, but what you are essentially trying to do is run a small business.

Either way, I really don't know why anybody would be dumb enough to pay you $5 for something they can just as well get on their own for free from the FCC's web site. I would hope the only people willing to pay you $5 for that are those who are just too lazy to go out and look for the info on their own.

Jughead

you are listening to the wrong side. well maybe not. that is just the handset frequency. Base freq's where you listen to both sides. is between usually 902 - 910. as I said usually. just so no one bites my head off. hehe

Hello-

Does anyone know if Bucks County, PA has switched it's police over to a trunked system? I have all of the "current" scanner frequencies but all of them
sound like a fax machine. I'm using a Radio Shack Pro-92 scanner with multi-trunking but can't seem to get anything from this area anymore. All other trunked areas are fine.

Any help would be appreciated!

Thanks-
Jeff

Shooting victim fights to rebuild his body, his life

By Farah Stockman, Globe Staff, 8/12/2001

The eight bullets that riddled Eugene Yazgur's body met their marks with an assassin's precision: One entered the 28-year-old's nose, breaking his teeth and shredding his tongue. Another pierced his liver. Another ripped into his arm. Still another snarled just shy of his spine. Two more snapped the femurs on each leg.

In the predawn shadows, the masked shooter fled the Jamaica Plain apartment, leaving Yazgur's roommate - a young poet - lying lifeless in his bed and Yazgur's dog dying on the floor. The only sound was the voice of a 911 operator echoing through a cellphone into Yazgur's ear.

''I can't hear you. I can't hear you,'' the voice said, until the cellphone went dead.

At the hospital, doctors told Ellen Yazgur that her son had been shot so thoroughly, so skillfully, that he had less than a 1 percent chance of survival.

But in defiance of those predictions, as if out of spite for the attacker himself, Yazgur survived.

Now, as he prepares to testify in October against the medical student and former Israeli Army sniper charged with the March 2 shootings, Yazgur is rebuilding himself, bone by bone, hoping that his body's victory will translate into another kind of triumph.

''I want to laugh in his face,'' Yazgur said of the day he will face Daniel Mason in court. ''I just don't want to walk in there with a cast on, or roll in in a wheelchair. I want to be standing.''

It won't be the first time he confronts Mason in court. But by now he knows better than to expect an answer to the question of how an unremarkable traffic dispute, the kind that happen every day, allegedly escalated over several years into a bloodbath.

Dangerous encounter

It was Moving Day, Sept. 1, 1997, and like most streets in the college neighborhood of Cleveland Circle, Orkney Road was clogged with moving trucks, U-Haul vans, and Hondas with futons strapped to the roof.

Yazgur, a 5-foot-6 mountain climber who had emigrated from the Soviet Union as a teen, was working as a mover. He double-parked his truck, and behind him, an impatient Boston University medical student named Daniel Mason, who was also moving, yelled out of his car that he couldn't pass.

Yazgur shouted back that he would move the truck in five minutes. But Mason, of roughly the same height and build, got out of his car and yelled that he would move it himself. After a quick scuffle, Mason grabbed Yazgur by the throat, pulled out a packing knife and nearly severed his earlobe, according to police.

Mason had been arrested previously for threatening to kill a girlfriend and beating a man in a dispute over gym equipment, and would later spend time in jail for pressing his thumbs into the eyes of a stranger who wouldn't stop jingling his keys while waiting in a line. For the attack on Yazgur, Mason was convicted in 1998 of assault and battery and given a suspended sentence.

In June of 2000, a judge in a civil case ruled that Mason owed Yazgur $118,000 for the injuries. After the judge announced his ruling, Mason, who had represented himself in court, closed his briefcase, looked over to Yazgur, and snarled, ''You'll never see a penny,'' said Jefferson Boone, Yazgur's attorney in the civil case.

''I expected that once he was faced with this humongous judgment that he would do something, that he would appeal,'' said Boone.

But he didn't.

On March 1, Mason was served with an order to start paying. Before dawn the next morning, a masked killer crept into Yazgur's apartment and methodically shot, with exploding schrapnel bullets, every living creature he found there.

Michael Lenz, a 25-year-old graduate student at the University of Massachusetts at Boston, died instantly from a bullet to the temple.

Yazgur, who was first shot through a closed bedroom door, eventually caught sight of the masked shooter and clung on to consciousness long enough to call 911 and be carried to the hospital. He finally closed his eyes - some emergency room staff thought for good - at Boston Medical Center, the same hospital where Mason, a scrub-clad medical student, was led away in handcuffs three days later.

Police began investigating Mason after Boone notified them of the long simmering battle and the fact that he had just had the payment order served on Mason.

Although Mason, now 36, had told friends he was haunted by his experiences as a sniper in the Israeli military and had turned to medicine so he could ''save lives rather than take them,'' prosecutors contend that his experiences in both lines of work made him a perfect assassin, knowing exactly where to shoot to cause the most pain.

Yazgur spent the first month in a coma that doctors induced so he would not feel their knives removing leg muscles he'd jogged hundreds of miles to build.

Full consciousness found him in a bed at Spaulding Rehabilitation Hospital, where his arms, once powerful enough to hoist himself up mountains, could barely part the curtains of his window. The window revealed a view of the Nashua Street Jail, where Mason sat awaiting his trial.

''You know he's in there,'' Yazgur said from his hospital bed, gesturing to a visitor. His legs were strapped into ski-boot style braces. ''What if he's looking out at me?''

Some of Yazgur's doctors worried about his mind. One trauma specialist said, ''He can learn to walk again, but will he learn to walk down the street again and feel safe?'' - but Yazgur focused on his body.

And he continued to fight for full recovery. The medical system that miraculously saved his life turned into a Kafkaesque struggle with insurers.

Yazgur fought Blue Cross Blue Shield, which he said planned to release him early. He fought doctors who encouraged him to wait on certain procedures because of backlogs and other reasons. He fought with the therapist who refused to work with his barely moveable right hand, Yazgur insisting it could be repaired.

Miraculous recovery

Nearly six months after the shooting, Yazgur walks on legs hugged by braces. Nearly every day, he makes the several-block trek from the Fenway neighborhood where he lives with his grandparents to his daily medical appointments. He winces, flashing teeth that are still under construction, when he passes a motorcycle that reminds him of the one he used to ride when he was living in Alaska. His liver, as obstinate as the rest of him, has regenerated itself. His hands - which have been his lifeline in all his jobs, from hauling nets of salmon to moving heavy furniture to, just before the shooting, writing computer programs - are now learning like an infant's how to do simple things.

''It's a total miracle,'' his mother, Ellen, said.

Despite the breathtaking achievements of a dozen different surgeons and physicians, his body is still a work in progress, and Yazgur is far from satisfied.

''I still have a couple dates with Mr. Scalpel,'' he joked, balancing carefully on the stool of a local bar.

Even with leg braces, a cast, and the loss of 40 pounds, Yazgur still looks fit as he stretches his shirt tightly over his stomach and runs a visitor's hand over the hard plate of tissue that has formed there in the wake of many surgeries. He wants that plate removed because now it hurts to bend, and one day it could impede his rock-climbing.

''If they won't remove it, I'll find someone who will,'' he vowed, lisping through the space between missing teeth. But beneath the slowly repairing surface, there are clues that the mental recovery will take even longer. He

confesses to being consumed with anger when a passerby on a crowded street bumps him. An innocent query about his cast makes him want to scream. The sight of dog hair on his mother's pillow chokes him with grief, and the only request he has made of detectives is that they return the leash of his dog, Sampson.

''I told him, `You know you are not the only victim. You also lost your roommate,''' Yazgur's mother said. ''But I'm not sure it helps to say that.''

Meanwhile, the man Yazgur calls an assassin maintains from behind bars that he is innocent. His lawyer, Robert Jubinville, said Thursday that so far ''nobody can make an identification'' of the killer.

The prospect of a trial that could result in Mason's release haunts Yazgur, but he says as long as his body is rebuilt, he can face it.

Search 902-905 & 925-928. Depends on manufacturer which band they put the base, and the handset in the other. I've found it's about evenly split - if you only hear one side of the conversation it's the handset (and usually a stronger signal than the base), do a search in the other band for the base. There aren't any rules for separation steps or modulation limits, so I usually search in 5KHz steps, and if the signal is extremely distorted you might try going to wide fm (unless you can adjust your bandpass independently).....
Cheers & beers!
Don

this is a reply to the same question from a few years back
I'm not sure which model this concerns but its a start..

==========

Press the decimal twice, enter the freq, then press the (ms) buttom, then the channel you want the freq in. To set the time, as I remember, you press the clock button twice, then use the (h) and (m) buttons to step through the hours and minutes til you get the correct time.

'Scan A' scans all 16 channels, 'scan B' can be programmed for which channels it scans. Press the decimal twice, then the button under (ms) (can't remember what exactly is on it, but its also the (m) for minutes button), then the channels you want in the 'selected' scan, then the scan B button.

Been years since I had a SX100 and SX200, but some things you just work SO hard to remember, you CAN'T forget them.. :)

Just got an old BC-180. Antique. In fact it has a sticker on the info plate on the back that states: "Acquired by Uniden corporation of America."

At any rate, I'm trying to find a manual online.

Also, how can I find frequencies in WV, including RR?

I have used a signal amp in line with my antenna to my BC 780 for about 8 months or so now. It works great, only draw back being the S meter gives false readings and you get intermod once in awhile (hardly ever). I just was wondering though after prolonged use could it cause the scanner to become deaf?
As in if you continuously listen to loud music you will eventually lose some of your hearing.

Thanks.

Brad,

No. Don't be ridiculous. This is electronics, not biological tissue. It won't go deaf unless you're overloading it to the point that things are heating up, causing premature failure of components. Doesn't seem likely if it's working well for you.

Hi,

We now have log periodic scanner antennas in stock for $63.70 shipping
included. These antennas were specially made for us, and after
extensive testing over the summer were found to have performance that
rivals that of logs costing many times our price.

They can be view in the Scanner Antennas / Base Antennas directory of
our website at:

http://www.antennawarehouse.com/

Thank you

Tim

...and which antennas might these be???

Do you have any specs available on this antenna? You make quite a few
claims on your site, do you mind backing them up with some specifics?

How come it covers down to 30 MHZ but you can't transmit of 6 meters?

Thanks

Glenn

The preamp will not have any lasting effects on your scanner. When you
take it off , the scanner will be the same as before. The sensitivity
of electronic devices does not have a lasting effect like your ears do.

Yes you can see the talkgroups, save them and then add a name to them once you have IDed them. So if you don't want to listen to say Water Work and only Police you can lock out Water Works. On a busy system you can have hundreds of groups but may only want to listen to a few, like I would hate to listen to a courier company when I could listen to police or fire etc.

Thanks Joe

Hi,
Forgive me if this has been asked a few times before this posting
BUT-I have seen several requests regarding information on ANY mods for
the Optocom scanner, but no answers pertaining to this. I am wanting
to extend my 'non-export' model coverage range. I am curious if
anyone knows of anything, since Optoelectronics is no longer selling
these. Email replys prefered, but will also be checking the
newsgroups. Many thanks in advance.

Hi Glenn,

I must admit to chuckling as I made the the post, knowing your crumugeonly self would retort in this way. Glad to see you did not disappoint me. It is so nice to start the day with a good laugh.

Since you take it upon yourself to be the newsgroup antenna cop, why don't you buy one and and test it yourself against your high dollar log? Then you can come to the group and report YOUR findings.

You know, it's goes something like, "do something useful, rather than give people who have a excellent track record of providing good antennas at great prices a hard time".

As to your one legitimate question, don't tell me you do not understand the difference between a antenna's resonance, and an antennas feedpoint impedance? Shame on you, and you portray yourself as the group's antenna expert.

Now, I would love to hang around and debate with you, however I am just to busy selling antennas to spend much time sparring with you. I just popped in to let folks know of the latest great deal we have. So you will just have to find someone else to pester.

Have a great day!

Tim

> Hi Glenn,

(personal attack snipped)

> Since you take it upon yourself to be the newsgroup antenna cop,

Oh, ask questions and one becomes the "cop".

> why
> don't you buy one and and test it yourself against your high dollar
> log? Then you can come to the group and report YOUR findings.

If you want to send one to me I will be more than happy to compare it against the KMAKMA4113 log I am currently using. Your's looks to be nothing more than a TV antenna mounted vertical. Considering it will only handle 60 watts max it must be cheap aluminum like most TV antennas. It looks to me to be a TV antenna that has been converted to vertical mounting. Who will ever know, you refuse to discuss what you sell. Why the silence Tim, all I am asking is specs and facts to back your claims.

> You know, it's goes something like, "do something useful, rather than
> give people who have a excellent track record of providing good antennas
> at great prices a hard time".

So Tim, asking for specifications of your antenna is giving you a hard time? Asking for more details about the claims you make is giving you a hard time? Why can't you backup the claims you make here and on your web site? Why is it you object to posting specs or particulars when you claim "extensive testing over the summer"?

> As to your one legitimate question, don't tell me you do not
> understand the difference between a antenna's resonance, and an antennas
> feedpoint impedance? Shame on you, and you portray yourself as the
> group's antenna expert.

You ARE sounding more an more like a scam artist. The log I use has a PUBLISHED spec of a SWR 1.8 : 1.0 OR LESS over its advertised frequency range of 40.6 MHZ TO 1300 MHZ. I asked you the question because it seems odd the antenna you sell has an advertised range wider than the range it can transmit on. Why is that Tim? I didn't know logs worked this way. Clear it up, after all you did "extensive testing over the summer " and should have more than insults to back your claims.

> Now, I would love to hang around and debate with you, however I am
> just to busy selling antennas to spend much time sparring with you. I
> just popped in to let folks know of the latest great deal we have. So
> you will just have to find someone else to pester.

Yes and I won't be suspicious of a merchant that refuses to backup his
claims. NOT!

You say "after extensive testing over the summer were found to have
performance that rivals that of logs costing many times our price."
yet you can't or refuse to say what antenna you compared them to or
any specifications of the antenna you sell.

What is your antennas gain characteristics? SWR characteristics? F/B
ratio? What materials is it made out of? Silence. Why are you afraid
of the facts Tim. You made the claim yet you won't back them up.

I did not need to ask the same question about my KMA log because the
merchant has those specs on his web page.

What are you hiding Tim or did I catch you in a lie? Post those
antenna specs Tim and clear this all up. Back your spiel with some
facts like reputable merchants do.

Glenn

BTW: Those that want to see how a reputable merchant sells his wares
go to http://www.qsl.net/w4kma/vhf_uhf.htm. I have no ties with KMA
other than being a satisfied customer. I am not saying at this time
Tim is not reputable but his protests over me asking for specifics
says quite a bit.

Dear Glen,

Our verifiable track record,

http://cgi2.ebay.com/aw-cgi/eBayISAPI.dll?ViewFeedback&userid=www.antennawarehouse.com

and return policy, speak volumes more to our integrity, and
willingness to back what we say than any diatribe you can muster.

Your reputation for being confrontational and argumentative is also a
matter of record here in the group.

As I said I do not have the time to play with you. You will just have
to continue without me. But I do want to thank you for continuing the
thread. Six orders for our latest offering have come in this morning
already.

Thanks!

Tim

PS: By all means folks, if you have the money to lay out for a KMA I can
whole heartedly recommend them. If however, you are looking for good
antennas at great prices let us know.

Last time I looked we have what's called a FREE MARKET system, with an almost overwhelming supply of information - you can sell or buy what ever suits your fancy, at what ever the market wants to support, or not support, it doesn't matter! If someone wants to give it away, or pay triple average going price, it's THEIR prerogative, and really don't need a bunch of nitpicking comments. As in most sales, it easy to come down, but near impossible to go up in price! Now if someone makes some ridiculous claim, like this has a mod to pick up digital transmissions in NYC from LA, then jump in, but otherwise I think everyone can make up their own mind whether they want to buy something or not.... Most people here are big boys and girls (note I said "most").....
Cheers.

snip snip snip, blah blah blah. Glen seems to be a new troll or something. He runs down everyone that I have seen his replies to. Even me. Calling names like. Stupid or
you aren't very bright, cheap shit. etc. I am sorry to say. If someone is poor or rich. scanning should not be a burden to them if they want to scan. But if aren't sopposedly as good as Glen. Then damn. you suck and are stupid. Well that is not my impression. May be his though. Or that is what it seems. This is a newsgroup. People ask questions or promote things. No one is really stupid YET. How do people think new things arise in the world in Communications. Having someone say they are stupid and that would never work. Maybe. Maybe not. People like Glen. running others on this and other posts is BS. Just because someone loves to experiment and try new things. Glen thinks he is Sopposedly too smart or stubborn. That does not mean that He should rule everyone elses lives. These may be great antenna's or bad Antenna's. It is in the USERS eyes what they think. No need to judge unless a person has actually experienced the product. Even then. It may have just been a defect.
or location.

Good luck

Dev

Dear Tim,

Why do you refuse to give any specs on your antenna. You have
made claims yet refuse to discuss any aspect of the claims you made.

What is your antennas gain characteristics? SWR characteristics? F/B
ratio? What materials is it made out of? Why is it you object to
posting specs or particulars yet you claim "extensive testing over the
summer"?

You say "after extensive testing over the summer were found to have
performance that rivals that of logs costing many times our price."
yet you can't or refuse to say what antenna you compared it to or
any specifications of the antenna you sell. Odd way to do business
isn't it? Ask any reputable antenna company and they will tell you.
Call most any ham radio store and they will either tell you or offer
to find out for you. Why are you refusing to give any specific
information in regards to your claims Tim?

Ask Tim and all you hear are personal attacks. What are you hiding
Tim? Why do you refuse to offer specifications on your antenna?

Glenn

For sale, a very nice Pro-34. This scanner is in very good condition, especially for it's age. There is one minor mark on the front case, otherwise flawless. Nice big display, uses AA cells of your choice. This radio has not been modified, but can easily be for full freq coverage. This scanner works great, nothing wrong with it in any way.

Jpeg pic on request. No manual or box, but the manual can be downloaded from Radio Shack's website.

Asking $100 plus a little help with shipping.

Email me if interested,
Jon

Can the average Frequency Counter(FC) pick up cellular? My Radio Shack ????
doesn't seem to. What's the deal??

How are you guys using your FCs?? Are you running up to people with mics up
to their mouths? Going INTO the building with the radios you want? Parking
in the back of the businesses?

I ask because I have only captured maybe 5 Frequencies in 3 years!! One from
INSIDE a police station!!

Interesting info Willi.

The English version with specifications is at

http://www.radio-portal.org/wp/tas.LPA8.html

Nice to see a company that publishes specifications on what it sells.

Does anyone have personal knowledge of this antenna. It looks like it
weighs less than 1 pound, and all of its elements look to be about the
same length,,,,,, yet it is supposed to be log periodic covering
90-1000 MHz. Sounds odd to me.

>I need info on programming a JIL SX 400 scanner. The scanner is in
>great shape but I need info.
>Thanks
It's a great scanner. My JIL SX 400 is still running just fine after
all these years. Makes a great aircraft frequency scanner.

These are the main programming steps:

To Program a frequency into a memory position:
Use the keypad to enter a frequency directly.
If necessary, set the mode to AM, FM, or WFM as desired.
Press the MW-H key.
Press the channel (1 - 20) that you wish to save to.
The frequency is now programmed.

To scan all frequencies in all memory channels:
Press the Scan A button

To scan only certain memory positions:
Press the SW-M button.
Press the desired channel buttons.
Press the enter key
Press the Scan-B button.

To set search limits:
Enter your lower limit frequency and press enter.
If necessary, set the mode to AM, FM, or WFM as desired.
Press the Lim Ent key.
Enter the upper frequency limit and press enter.
Press the Up button.

The Speed key does what you expect.
The Lockout key will let you skip a channel when doing a Scan-B
selective scan.

Priority button samples the frequency in memory postition 1 every few
seconds.

That's about it. Have fun!

Ender

What's all the fuss? It's obviously a modified (or not) TV antenna which will probably give fine performance compared to a discone. Most scanner discones are rated for 25 to 1300 mhz and they are actually about 120 to 900ish mhz, with a whip that is sharply tuned at about 50mhz. I don't see anyone pissing about the specs of the most common and crappie scanner antenna out there. Why would someone even try to compare it to a $300 antenna? The bottom line is the price is pretty cheap and you will probably get what you pay for.

## 100. Hmmmm trunked system maybe

Newsgroup: rec.radio.scanner

Source record: 59051

Looking thru the fcc database, I discovered these frequencies assigned to a place here in town:

462.8750
460.7750
461.7875
461.9375
462.1625
463.2625
463.3375
463.5625
463.6625
463.7625
463.9125
463.9625
465.7750

Do those look like the frequencies to some sorta trunked system? I have just programmed them in, but so far not hearing anything...

I have a couple here. I have a RS one here too. I did once however pick up the cell freq about 100 feet or more away. if you go into detail and throw a proper antenna and preamp. or a antenna with a bit of gain. you will be surprized what you pick up. anyways. on the cell topic. are you sure it is 800Mhz you are trying to get. since most newer phones will not show up on the RS one or others that go to 1.3 Ghz. since they are higher then that.

Hi there,

Does anyone have any frequencies used onboard the cruise ships that visit or plan to visit Sydney Harbour ?

Ships such as,

Pacific Sky

Regal Princess
R Five
Silver Shadow
Legend of the Seas
Norwegian Wind
Crown Odyssey
Seabourn Sun
Seven Seas Navigator
Queen Elizabeth 2
Pacific Venus
Aurora
Amsterdam
Delphin
Asuka
Oriana
Saga Rose
Clipper Odyssey
Crystal Symphony
Volendam
Prindsendam
Silver Cloud
Hanseatic
Sun Princess
The World
Europa
Maxim Gorkiy

Help with frequencies regarding any of the above ships would be greatly appreciated.

Cheers

Ian

## 103. Pro-92 Question (Trunking)

Hello-

On my Radio Shack Pro-92, I have all of Montgomery County, PA's trunked system programmed. It's a Motorola system. Some of the numbers include 2992 for fire dispatch, 2650 for Norristown police, etc....and I have every frequency programmed, too.

So why does a known trunked number which I have a text label for still show up as a number instead of the text? This is driving me crazy! I have text labels for all the numbers under the trunked system, but yet some still show up as numbers instead of the text. Does it have something to do with the control frequency. That's something I still can't understand.....

Any help would be appreciated!

Thanks-

Jeff

It should pick up the old analog phones (NBFM) if you're close enough
and if the counter covers 800 MHz.

No fuss, just questions. Tim make the following claims and then has a fit when asked for clarification and specifications.

Tim says:
"They have higher performance than any other antenna we have tested in it's price class."

Which antennas was this compared to? Tim made the claim but refuses to back it up.

Tim says:
".......rival the performance of logs costing many times their price."

Tim also makes this claim but refuses to say which antennas it rivals. Rivals antennas costing $104 (2x)? $158 (3X) $212 (4X)? Which ones? Tim doesn't want to say.

Tim says:
"....after extensivee testing over the summer were found to have performance that rivals that of logs costing many times our price."

After extensive testing over the summer Tim can't give any specs or details on the antenna he sells.

No fuss, just wonder why Tim can't answer these typical antenna questions. Call Grove and ask them a question about their beam antenna. They will answer anything. Call any merchant other than Tim and they will answer anything about the product they sell.

Why won't Tim back up the CLAIMS HE MADE??

Yeah, his specs look pretty wild for a 4 element antenna. Seems the antenna people (yes you too Tim) like to embellish and squeeze reality as much as they can.

These wild claims probably sound good if you are inexperienced and have nothing but a the whip antenna that came with the radio. They certainly will do better than that whip antenna but why spend $60 for a $30 TV antenna with two mounting holes redrilled to put it on the vertical?

In article <j98nrtkb40fkrfid0033vm2fcb3ec57dau@4ax.com>,

If you could read fool I told you she was a psychiatrist which is four more years of college above a psychologist. A psychiatrist is a medical doctor, a psychologist is not.

>And how does she explain
>intermarriage, which is getting steadily more common?

Yes fool she discusses these things in great detail, the why of it and how it fits the plan and what that plan is. Dr. Welsing leaves no questions left unanswered and it all makes perfect sense.

You can't read but perhaps you can listen and learn something. The interview with Dr. Welsing has been posted earlier today in alt.binaries.sounds.misc and alt.binaries.sounds.audiobooks

Looking for a way to hook up multiple receivers to a single antenna?
Take a look at the Stridsberg Multicouplers! These units work great. The
reason I'm posting this is that I own an MCA104 and for some reason it
quit working, sent it back to Stridsberg and it was fixed for FREE and
even updated to current specs! Turn around time was about 0ne week.

The unit works great, and I've been very happy with it.

I can highly recommend the products manufactured by Strids berg.

He DOES know how to read dipshit, read your above sentence. A
psychiatrist is a scam artist. To put them in the same league as medical
doctors is a slap in the face of medical doctors everywhere. Learn the
difference.

Gee, thanks for the warm invite.

It sure sounds like racial hucksterism to me.

I live in DC and did look her up in the phone book, and there is someone of this name listed as a physician, but I'll tell ya, I read the papers and stuff and I've never heard of her, never seen her asked to guest on panels. And you didn't answer my question about why you think Beatles fans and Trekkies want to hear from you.

BTW, when we use the word "Fool" around here, it's usually followed by "on the Hill".

1 - She seems to think that the white ethnic group is the only one
that has racist views, remarks...when it is actually a part of human
nature. Maybe she should move her research to removing those traits
from the human race.

2 - Even if she did find a way do you think anyone would have their
children geneticall manipulated for this reason, when proper
education, and social atmosphere will correct the problem?

3 - Still make perfect sense?

I also had a very pleasant experience dealing with Stridsberg. I bought MCA204 but had problems in the 140 Mhz range. Sent it back and he checked it out, found nothing wrong and returned it no charge. The real problem turned out to be overloading from a nearby FM station. I bought one of their FLT201A FM notch filters to correct the problem.

Later I read a report in MT about the MCA204 that mentioned that it had been improved with a new from end. I called Stridsberg to see if I could upgrade my 204. They did it at no charge. Now that's customer service! During my calls to Stridberg I had several interesting conversations about scanners, radios, etc. Very pleasant to deal with.

I am no way affiliated with Stridsberg other than being a satisfied customer.

Ian,

Do a search on google groups.
I asked for ship freqs a few months ago and someone
sent a link. It had a few ships on it, but I didn't save it.
Most of them were out of Miami.

I seem to remember hearing this stuff from all the neo-nazi geeks who try to post in the heavy metal groups. Reverse the racial identities and it sounds just like the crap they post. How would you like to hear someone ranting about how black people can't help but be racist? Inflammatory rubbish like this is the reason no one can get along with their neighbors. 1% of the population stirs up everybody else with thinly veiled lies and then profits from it. Most people just want to live their lives peacefully.

Ivy league hot house flowers like the good doctor make their living by convincing people that there are racists under every rock and behind every

tree. I wonder how often she leaves her little world to observe the people around her? Most of the people my age that I know have no problem talking to people of all nationalities. Society is more open than ever before and many people don't care what race someone is or what their religion is.

I don't know why anyone takes this seriously, people laugh when nuts start screaming about flying saucers, the Bilderbergs, the Tri-lateral commission and the Jewish conspiracy, this is more of the same insanity.

I agree. I listened to Dr. Welsing, and this woman is scary!
In some ways it reminded me of what some Nazi physician may
have said if interviewed during WWII about Jewish people.

This woman is on the extreme fringe and does NOT represent the views
of 99.9% of black people. I will also note that I have met just as
many black racists as white racists in my life. You also see "black
leaders" such as Al Sharpton who have made a career out of racism,
try to keep it alive at all costs (or they will be out of business).

I work with and have many black friends and people like Dr. Welsing
are not doing anything to help them. Rather, she is playing right into
the hands of the so-called "white supremacists" by giving them
material they can use to further their causes.

I was unaware that the cellular band had been increased. Are you sure? Isn't 1.3GHz for cordless?

## 143. Re: Frequency Counters don't pick up Cellular?? FC Tips . . .

Why not digital? Digital transmittions use RF like everything else and my FC goes up to 1.3 GHz. As long as the signal is strong enough and below 1.3GHz I should be able to pick it up, but I'm not . . . why?

I listened to the interview and my mind was "blown away". Dr. Welsing does not speak of any of the things you post about above. She is very intelligent, probably in the top one half of one percent of her people. Fascinating presentation and much different from what I expected.

I really doubt that they are. They are business or maybe airline
frequenicies.
Trunking usually occurs in the 150 Megacycle, 406 to 420 Megacycle,
850 to 855 Megacycles, 860 to 868.8875 Megacycles, and 900 Megacycles.
Thus could also be low powered non-repeater frequencies. The 462 freq
looks as if it could be a G.M.R.S. freq.

Probably the cell phones you were targeting were using spread spectrum, the frequency was changing faster than the gate of your counter and you would just get an indication of signal strength, yet not be able to resolve a discrete frequency.

~~Bart~~

## 149. FS: ICOM IC-R2 WITH SOFTWARE AND CABLE

From: Don Parker <tazman@cox-internet.com>
Message-ID: <trs7sdg8iop185@corp.supernews.com>
Source record: 58951

a. Signal probably not strong enough - FC's are NOT noted for sensitivity
as compared to a receiver, and for good reason. Just because your scanner,
or whatever, can hear it 5X5, don't depend on the FC to do it, too. The
receiver is being selectively tuned, while the FC is just waiting for
something to exceed a threshold, and doesn't really care what.
b. Signal probably not clean enough - Any modulation present can prevent
a stable enough signal sample, during the required time frame, for the
counter to lock on to and validate a discrete frequency, ESPECIALLY a cheap
one.

You are listening to Relay Communications in Riverhead, NY. It is a voice pager service with synconized transmitters throughout Suffolk County, NY. I used the service for 10 years. Service is excellent and it's been family owned for decades.

I need a VHF high Band crystal for a tabletop Plectron monitor. It appears to be a standard 10.8 IF crystal. I cannot locate a dealer on web. Anyone know who still sells cyrstals?
Thanks,
Bruce

Ok I guess I made a bad assumption, Being a radio scanner news group I thought that it would be obvious I was looking for a scanner descrambler. All I know is when the local PD scrambles they say go to DPP or DBP or something like that. What do I need and where can I find one?

Just get in touch with JAN Crystals in Florida...Don't recall their 800 number, but you can do a search on the web...I'm sure you'll find them. They usually have crystals for darn near anything!

I have for sale a mint Icom IC-R100 Communications Receiver. This radio has never been mobile and I am a non smoker. I have the box, owners manual, sales brochure and all included standard accessories. The R-100 covers 0.1-800MHz in the AM, FM and FM wide modes.
I am asking $400.00 plus shipping from 48026.

I guess I would hate to be a persont hat is strapped for cash. A person that bought something that would work. but then have others say they Are cheap. You buy what you can afford. no need to be rude.

I have seen other Name brand counters that have worked worse for more money. So everyone to their own. I have two here rightnow that work about the same. the RS works better then the OPT...ICS one. payed less for the RS. and has worked better. atleast it is durable. I forgot it on the car a few times. still works great and the case didn't even break. the paint slightly chipped. but that is about it. I tested the frequencies still read accurate. and so on.

>1.3GHz I should be able to pick it up, but I'm not . . . why?

Frequency counters are really designed to pick up continuous-carrier signals and count cycles of the carrier. Old analog cellphones transmit FM, which is a continuous carrier whose frequency is modulated (slightly). That's just the thing a FC is designed for.

But digital cellphones use different ways of transmitting data. Some use TDMA, time-division multiplexing, with several phones sharing a single channel. Any one phone transmits for a short burst and then is silent most of the time while the other phones take their turns. The burst of transmitting isn't long enough for most counters to get a reasonable reading. (GSM uses TDMA transmission too).

Other cellphones use CDMA, where a single phone transmits a spread-spectrum signal that's about 1.25 MHz wide. This looks like noise to a standard frequency counter or a normal receiver.

Also, a lot of the digital cellphones in North America work at 1.8 GHz, not 800 MHz, so a 1.3 GHz counter has yet another problem.

Dave

It is not polite and proper to speak of "Christmas" - this is offensive to some groups, for example, Muslims. You should only refer to the "winter holiday" or the "year end break."

Hello together from Germany,
i own a Digital Scout made by optoelectronics since short time. It counts everything longer than 500msec. So it is able to count any TDMA type GSM signal. We have the digital GSM system now everywhere. No more analog signals. Also it counts the 1800 MHz GSM without problems.
Okay, that`s for now....
Greetings

I am sorry if I offended you. That was the last thing I intended to do. But it seems that at a time like this when there is so much hostility in the world, from misunderstandings about each other, that we should try harder to be sensitive to each other's feelings and seek more cross-cultural interaction, reducing barriers to open communication and better understanding of our multicultural environment.

I do not understand a few things in your post. What does "freightened...whining...." mean? Why would you want someone to "bite" you? That doesn't seem like a pleasant thing. Is that a way people in your culture like to interact?

ya. blah blah blah. I was just saying that people aren't always rich like you or others. I never said cheaper was better. I was just stating the FC that I have used. so far out here. the RS worked better. Atleast I did not tell you to shoce things up your ass. you may get pleasure from that. but I don't. Just like you seem to judge. Thinking you have all the brains with licencing. I am sorry that I only have the advanced ticket in Ham radio. whoop de doo da. It should not be that hard to get the Canadian Radiotelephone license. As again. I never said anything about digital or spread specturm. all I said is here. the digital phones work on 800 and 1.8, with the analog 800 cells. I know that the 800 Digital cells don't get picked up from FC. nor do car alarm remotes TXing usually on 300 Mhz. or the 900 Spread Spectrum Cordless's. I just did not go into detail. so. go cry somewhere else. trying to brag about your licences and/or cussing. as I resay. I never said money does not buy better. but as if I am going to spend a fortune for a FC or other things. Just to have in my car to get stolen or so on.

So you feel the need to point out the differences, yeah.... that will unite the people... Good thinking. People who are offended by the idea of Christmas have major issues that they need to deal with. I don't become offended because someone speaks of their holiday (Yom Kippur, Martin Luther King day, etc..). Now go run along... I don't want to feed the troll no more.

eric.

## 187. Trunking System, anyone know this one?

I recently came across a Trunking system in Kingston, Ontario. The
frequencies are (that I have found through Control Channel) are:
- 863.4625
- 862.7125
- 863.2125
- It appears to be a Motorola Type 1 and seems to use Fleetmap 3
- Appears to be a delivery company or Taxi company on it (have not found any
others as it is the weekend)
- The ID is 000-0

Does anyone listen to this system and know the users/layout any information
would be great?
Maybe someone on the system visits these newsgroups

I

I'm glad you cleared up the "shoce" thing with your next post, but I most likely would have eventually substituted "shove" after careful anaylasis of the rest of the sentence, and linking it to "stick it where the sun don't shine". Hey, just cause I'm down here in Arkansas (that's in the US, contrary to some reports), don't mean we all just fell off the turnip wagon, ya know........

> don't. Just like you seem to judge. Thinking you have all the brains with
> licencing. I am sorry that I only have the advanced ticket in Ham radio.
> whoop de doo da.

Only reason I mentioned the license was as a "qualifier" for the observations pertaining to test equipment. It makes things more credible than if I said, "well, I just got home from sacking groceries, and.....". Nothing shabby about an Advanced ham ticket, they don't exactly grow on trees either! However, in all honesty, I got demoted from "1st Class" to a "General" when the FCC consolidated the license groups a few decades back (which sounded really strange, being x-navy).

>It should not be that hard to get the Canadian
> Radiotelephone license

NOW - what's this drivel about the Canadian Radiotelephone license being a pushover to get (I won't even ask why it came up in the first place...). Are you inferring that the Canadian's have a lower standard, or are dumber? My great grand parents immigrated from Dundas county, Ontario in 1855, so that would be about as offensive to me as being called a rude, socio/economic insensivtive, profane, whiney, braggart!! Is there no end to the insults??

>As again. I never said anything about digital or

the
> 900 Spread Spectrum Cordless's. I just did not go into detail.

Me neither. (?) I just threw in a couple of casual generic FC traits to help answer a simple question.... I guess I could have tempered the second one by saying "less expensive", rather than "cheap", had I known there were hyper sensitive souls interpreting every word on a personal level, rather than as a general symptomatic reaction of the product category being discussed vs. operating parameters. After all, where would we be today without a Radio Shack in every mall? Back to Allied and Lafayette Radio catalogs, no doubt!

> so. go cry

For sale, a very nice Pro-34. This scanner is in very good
to excellent condition, especially for it's age. There is
one minor mark on the front case, otherwise flawless.

Nice big display, uses alkaline or rechargeable AA cells.
This scanner has not been modified for full freq coverage.
Works great, just looking for a good home. I don't use it
because our area has gone almost entirely trunked.

Jpeg pic on request. No manual or box, but the manual can
be downloaded from Radio Shack's website.

Make a serious offer if interested.

Thanks,
Jon

Now you've done it. There are many who find the warm summer months
pleasant, but do not at all enjoy mention of winter.

I hope there are no calendar makers here, because they really become
upset when the end of a year breaks.

Please - try to be more sensitive to the beliefs of others.

## 199. Icom PCR100/1000 and PDA Control?

Source record: 59001

I have a Radio Shack Pro 2006 that got hit by lighting. I asked the dealer if they repair their products, and he looked in a book, asked me what happened to it , and said it would be $49. My question is, has anyone else had RS repair their 2006. Did they fix the problem? Did they leave the rest of the radio alone? I have a pre blocked scanner, that I can unlock at any time if I feel the need to. Will they leave that as is? I have heard reports of them changing things without the owners permission. Any help would be appreciated.

FRED

I ran one of the frequencies through a search engine for Industry
Canada's TAFL files for licensed radio users:
http://neon.polkaroo.net/~darkwing/tafl/

(Kingston is under the Belleville regional office)

They're licensed to Christie & Walther, an Ottawa-based commercial
communications company.

For more information on this system (and monitoring in the region) I
suggest you check out the YahooGroups mailing list 'ottawascan' You can
find it at http://www.yahoogroups.com

Well I for one would never dream of offending any group, knowing it's a mere minority of them (<1/2 billion) that wish all infidels to be skinned alive, then burnt, that just had a hand, however seemingly innocent or covertly planned, in massacring over 6,000 innocent Americans, and costing our economy several hundred billion dollars (can we say "so long surplus, hello deficit, boys & girls"?), so I'll be polite & proper in not mentioning CHRISTMAS, and instead refer to the winter holiday (around CHRISTMAS), or the year end break, right after CHRISTMAS. Even though I would like Santa Claus to bring me one of those nifty looking receivers for CHRISTMAS, it'd be really nice to know the price. Anyone know any definite rumors????
Don't know how many days are left before CHRISTMAS, so I'll probably have to start saving now. Shhhhhhhhh - be vewy, vewy, qwiet - CHRISTMAS will be upon us before we know it!!!!

Oh, screw it - if their guts were on fire, I wouldn't piss in their month.....
Just call me old fashioned (and fed up with empty rhetoric while they plan and pray for our eradication); if it's good enough for them, it's good enough for me! Do unto others, as they would do unto you - only do it FIRST!!! Now, if I'm wrong, and there are nice warm & fuzzy feeling Muslim countries, that only want to co-exist and wipe out those nasty evil doers - PROVE IT!!!!!!! Take one step forward... Hmmmmmm, still waiting.....

Actually, the Muslims have nothing to do with it. The attacks were a plan cooked up by "W" to cover his ass for the huge mistake he made by blowing all that cash on the tax refund leaving the federal government strapped, and to guarantee that we ruin Alaska by drilling it up for oil (remember the fear about super high gas prices...hmmm...never happened, did it? Prices seemed to drop after we got serious about drilling in Alaska...hmmm). He has engineered a great excuse for why the nice healthy economy of the Clinton era immediately went down the tubes as soon as he got into office! Not as dumb as we thought he was after all.

> I have a pre blocked scanner,

Have never had to take mine in (it's still blocked) but it's my understanding that they will repair it as long as there is a diode in the D-502 slot. That price sounds too good to be true.

$49 PLUS parts......

If you actually want them to tell you what's wrong and
give you an estimate, It will cost $20, non-refundable, but
you can apply it to the total cost if you choose to get it
serviced.

umm. I don't think there is software made for it. but. I know when I owned it. it was not that hard to control command line. but if it will support a serial connection of some sort for the pins needed for the radio's DB9. it could work. you would know if it did. cause it will repeat H100 over and over. H101 with the CR and LF turns the radio on. CR = carriage return and LF = Line feed.

I have a Sony ICF-PRO80, still works really well, but is famous for its quirky UI. I've lost the user manual somewhere on my travels, and am not getting the best out of the unit as a result.

Anyone out there who'd photocopy/scan me the English pages from their (PRO70/PRO80 manual (part number, I believe is, 3-990-095-12 (2)) ??

Much appreciated :)

.....David

hehe. anyways. I am not sure what rules pertain to getting that licence out here. I have noticed some are easier to get in canada then the US, And the US is sometimes easier to get then canada. but mostly the same structure I would think I remember studying the US study guide for the basic qualification in ham. It was the same concepts yes. but had more stuff then what we had on our tests that we did not learn up here. oh well. I wasn't wanting to cause a war. I just get uptight when it sounds like someone was belittleing another. all depends on the ? too. if I mistook it. then I apologize.

Source record: 59019
Cross-posted to: rec.radio.scanner,alt.music.mp3

Did you encode at 128 ??? 5 megs seems kinda big for scanner audio. Scanner audio isn't very hi-fi, so there is a special mode for encoding low-fi stuff. Some encoders have "Mpeg3 2" and use the 32 bitrate, mono channel. That will cut the file size by A LOT. Just don't use regular mp3 at 32 bitrate, it will sound all muddy, it has to be "mpeg3 2" with the 2 after it.

In article <7vcsrtsibgi9grgbdnv2lur0r9anhsntj4@4ax.com>,

Forsale: Uniden Bearcat Scanner
Backlit LCD Display The BC 350A features an easy-to-read 9 digit LCD with backlit display for improved night visibility. Never Used. Paid brand new $130
Asking $85+shipping. For more details please email or call 609-386-9382
Thank you for reding my sale post. Thom_j.
Features:
50 Channel 11 Band Programmable Mobile / Base Scanner
11 Band E-Z Scan Mobile/Base Scannner. Lock-out, band search, LCD display, memory lock, & Instant Weather.
Monitor Emergency Personal, Military, FBI, Secret Service !!
11 Band Coverage Including Ham Bands, Federal Land, Mobile Bands, Weather Band, Fire/Emergency, Marine Band,
Frequency Coverage From 29.0 MHz Through 512 MHz And Ham Frequencies AC or DC Operation
Band Search The BC 350A scans over 22,000 channels and has 11 seperate band search capabilities.
Channel Lockout Lock out unused - busy channels to concentrate on specific channels. Fire & Emergency Scan. Full-Frequency LCD Display. Local Police Scan. Mobile Mounting Kit. One Touch Instant Weather Automatically scans all National Weather Service frequencies.
Preprogrammed Service Search - Programmable Scan Delay - VFO Control Knob - Includes Aircraft Band - Selective Search

I have a Winradio 1550e with software as of September 2001. I am having trouble figuring out what a valid CSV file looks like to import into Advanced Memory Manager. I someone could post a few lines from one they are using...

Any other advice on the subject, points to files on the web would be appricated.

Thanks.

hi
if you can find the dialing code for the uk from where you are i have a
phone number for a company that still make them.
the phone number given is how you dial it from the uk.
the cyrstals wanted just tell them the frequencys wanted and they make them
to order .
the min charge is £10:00 but if more than one is bought then £7:50 each
including P+P.
hope this is of help.
the phone number is :- 01322 330830
cheers
harvey

Yes, a pager doesn't transmit a signal like a cell phone so it doesn't
mess with the medical telemetry and other stuff in the hospital.

How true. Poor babies. Maybe Geo W. can invite Aerorat & Osama & perhaps some of his stone age buddies, for a nice cup of hemlock tea to patch things up..... If not, I'm sure they won't be ignored much longer, or damn well better not be!!!!!! Jesus, where's Barry Goldwater when we need him?

You can't POSSIBLY be serious Doug, comparing a decent man against
a low life slime ball like Clinton. Typical left wing drivel, when
you can't provide facts or reason, resort to asinine attacks and
outright lies. Sheesh, where DO idiots like Doug come from?

I ran one of the frequencies through a search engine for Industry
Canada's TAFL files for licensed radio users:
http://neon.polkaroo.net/~darkwing/tafl/

(Kingston is under the Belleville regional office)

They're licensed to Christie & Walther, an Ottawa-based commercial
communications company.

For more information on this system (and monitoring in the region) I
suggest you check out the YahooGroups mailing list 'ottawascan' You can
find it at http://www.yahoogroups.com

You can probablt find one at a HomeDepot/HomeBase type of store. It may not match what you have --but then get two of them. Who will know?

I think this would be a cheaper solution than RS -- be sure and take your old one with you to match the size and threads.

dm

## 248. Re: RS 2006 repair

what they will do is replace the diode, and cover it with resin so it can not be removed or snipped without difficulty of damaging the scanner.

"Earl Turner" <TurnerDiaries@Pierce.net> wrote in message
news:kwtv7.12069$WX5.306222@e3500-atl2.usenetserver.com...

I was struck by the purpose with which Osama Bin Laden spoke. The lack of fear, the calm, the well reasoned and forceful speech that he gave while sitting on the cold ground in the mountains of Afghanistan with the American and British military poised to strike a hellish blow against himself and his comrades. What a contrast it was to listen to Osama, a man born into great wealth who has forgone it all and lives in poverty using his wealth to fight for justice. Who among us would piss away $300 million and put our lives on the line year after year to make the world a more just place in which to live?

I am not myself a religious person, I don't believe in God, but I do believe in Justice. What Osama spoke of, the reason for this war is something the entire world is aware of. The Israelis are committing genocide in Palestine, a land in which the Jews do not belong. They have stolen the land where they are murdering (Israelis do not "live" they only rape and plunder) children and breeding misery. The Israelis fight like cowards, dressing up in the clothes of Palestinians and planting bombs and poisoning their foes. Israelis call their cowardly, wicked, genocidal behavior "smart". Their treachery is so extreme, so vulgar that young men will strap explosives around their waste and blow themselves to pieces just to wound a few Jews.

If Americans knew of the decades of pain, the systematic torture of small Palestinian children in Israeli jails then they would understand why young men would blow themselves to pieces to wound a few Jews. Of course Americans are not aware of this. After Osama's great speech Tom Brokaw mentioned the reason for the attacks in New York and Washington D.C. as stated by Osama. Osama stated clearly "the attacks on America would continue as long as there were Israelis on Palestinian land". Brokaw then turned the air time over to Andrea Mitchell, a Jewess who fornicates with the Jew Alan Greenspan who heads the Federal Reserve. The Jewess who goes by the name Andrea Mitchell then proceeded to ramble on for several minutes portraying Osama Bin Laden as a militant enemy of "America" and never once mentioned Israel, this after Osama specifically stated that strong support of Israel by America was the sole reason why this attack on America had happened and that the attacks would not stop as long as the genocide of Palestinians by Israelis continued.

It is very simple; do Americans support the systematic torture, the breaking of bones of Palestinian children by the Israelis, the murder of Palestinian leaders and politicians not named Arafat? If Americans will do nothing to stop the flow of over $6 billion every year of their tax money to Israel then the attacks will continue. America may survive in name but as a nation based on the Constitution of the United States of America, that America will never survive such a conflict. All of those values that Americans hold dear will be lost. The soldiers will eventually be in the malls, then the supermarkets. Searches of houses will take place without warrants based on suspicions of an incompetent employee of the FBI who read a post on the internet made by a teenage

prankster and traced it incorrectly. Innocent people will be beaten and killed by these soldiers not fit for police duty. Life in America will become a new hell, a prison where people who do not like one another are forced by the point of a gun to live with one another, work with one another and eat with one another to satisfy the insane needs and desires of a small number of people, less than two percent of the population in America. These people hate everyone who is not one of them. They are the most "ethnocentric", the most racist group of people on planet Earth. They lie as a way of life, whether it be for survival or prosperity. No crime is too great to commit because they claim they were wiped out, removed from the face of the Earth in the 1940's in some event they call the "Holocaust". Despite the fact that they are still here, that they are the richest group of people in America, that they occupy and dominate most positions of influence in American society they still claim that they were destroyed in the 1940's, and that event that they call the "Holocaust" justifies everything and anything they do.

From 1940-1945 fifty-five million people died, but according to the Jews no one should think about anyone dying except "The six million". Why is that? Putting aside the fact that Jews-Rabbis-can only document the death of three and half million Jews during the period of 1940-1945, why should the entire world ignore the death of over 49 million non-Jews? What makes Jews so special?

You would never ask such a question though if you lived in America, not in public anyway. The Jews would brand you as an "anti-Semite". The Jews do not even accept the scientific fact that all Middle Eastern people-such as Palestinians-are "Semitic". No this lie you must accept as well or you are an "anti-Semite". Having been branded an "anti-Semite" you are then cast out by American society, you may as well just leave the country because no matter what your ability you are through. An "anti-Semite" might love the Palestinians, or might marry an Arab (Semite) but the Jews consider him or her an "enemy of the state" if they dare disagree with anything the Jews say in America.

So who runs America? Who decides whom we Americans go to war with? How many Americans are aware that the Fortune 500 defense contractor Northrop is a Jewish enterprise? Did you think that the Jews were just animals who made movies like "Guess Who's Coming to Dinner", "Sayonara" and "Save The Last Dance" (among many others too numerous to mention)? They control the guns as well as the news and entertainment. Jews control Wall Street (that's why the World Trade Center was hit) and if you look closely at Rumsfeld and Casper Weinberger, and former Senator and Secretary of Defense Cohen you can see the Wall Street-Pentagon-Jew connection.

Americans must wake up; Americans must see what is happening and they must fight to take back control of America from the alien element that has hijacked their government. Americans do not have a choice about this because that alien element is committing genocide against people in the Islamic world and people in the middle east cannot just sit still and wonder when Americans will wake up to what is going on and put an end to it. If it were your children being tortured and murdered you would feel the same way.

The hatred by Jews for non-Jews cannot be explained rationally because the Jews are insane, wickedly so. Jews believe themselves to be "human" and all the worlds' people to be "animals", "beasts of the field", "natural slaves" here only to serve the Jews. Even Jews who claim to be "atheist" (why does this not set off alarm bells? How can a "religious" group of people publicly acknowledge atheists among them in good standing?) believe themselves to be better than any non-Jew.

Americans who sit in front of their TV watching nonsense in the form of "sports" and "entertainment" (all produced and influenced by Jews) while stuffing their face with pizza, burritos and other crap will either wake up, shape up, and confront the Jews and what they are doing and put a stop to it or they will lose every part of their "way of life". Everything they do now and everything their parents and grandparents did as they lived their lives will come to an end. The Jews are putting up surveillance cameras everywhere while producing essays and video reports on the "news" telling you that it is for your own good. If you continue to sleep through the bombings-both here and abroad-then you have no one to blame but yourselves.

What could be so bad that people would sacrifice their lives to fly jet planes into buildings? If you don't know the answer to this question then you need to read this post again. Then you need to ACT.

For more on how they control America: http://natvan.com/who-rules-america

Yeah, apparently in the head!! You need to read the REAL Thomas Paine's writings, he would never have been taken in by the crap you forwarded.

Another crackpot from the @home.net crowd. Wonder why all the losers, weirdoes, and crackpots are either at home.net or roadrunner.com.

BTW: posting to alt.fan.britney-spears?? You ARE a loser!!

Hi All,

Does anyone know the type of interface the JIL SX-400 scanner (circa 1980's) uses. The connector is the same as a hard disk drives IDE plug but I do not want to start plugging it directly into the PC just yet!

Also has anyone successfully interfaced this scanner with a PC?

Regards

Mike

You are joking, right? Oscummy bin Laden spoke out not only at the Jewish, but the Christians as well and ALL Americans be they religious or not. I'm not Jewish, but know a few and they are nothing of the monster or trash you speak of. They are decent hard working people. Certainly not rich by any means. Actually, fighting for survival like most in this country now days, Jewish or not. I hope for your sake, you aren't a follower of Oscummy or a believer of his sick philosophies. IF Oscummy knocked on your door right how, whether you love or hate the Jews, because you are most likely anything other than what he wants to see, you my fellow Earth Creature are as dead in his eyes as I am. So, to stick up for him isn't going to win you any BROWN NOSE points. What are you going to do, disown America to save your ass? OR maybe you are one of his people under an assumed name that is on the FBI's list! Curious as to which it is?

Web sites don't mean dick to me. Any one can make one to suit their own cause be it right or wrong. You are entitled to your views and opinions. So too am I. Sad to say, I strongly disagree with yours(?) or let's say Oscummys, as I'm sure many others do as well. Oscummy is a very sick person. One can only hope, that he is sent to hell to be with his master. He was tossed out of his country and his money on his scummy ass because of his beliefs. His own brother here in America has publicly disclaimed him. His family in Saudi Arabia has publicly disowned him. Even the Muslims are starting to fight back to tell the "real" story. This asshole isn't "Muslim". He is blaspheming the Muslim religion to suit his own cause. Just like some of our own so called ministers and priests do wrong in the name of religion. THAT IS NOT RELIGION. I'm not a deeply religious person, but I DO believe in God and Jesus Christ. It is those who do evil in the name of religion that make me wonder AND sick. When God and/or Christ himself stand before me, then and only then will I change my ways. I will have good reason to. THEY are the ONLY ones I will bow to. Oscummy is NOT Justice. He is a MURDERER. He is another Hitler wanna be. It's either his way or no way. FUCK HIM. Him and Saddam ought to be tied together in a 69 and have a spear put through them to send them to eternity together.

JUSTICE???????? Justice will be when him and the rest of the cancer cells like him are given a shot to be eliminated like the disease they are. As for the Jewish-Palestinian problem, that has been going on for many many years. Long before either of us and that scummy bastard were twinkles in our mothers and fathers eyes. With or without intervention of the US, that may never be resolved. It hasn't been all these years even before the US was the US. Why now? AND Mr. Wonderful is now here to save the day? Sorry, I don't think so..... He is nothing short of a sick murderer. He and his followers will get exactly what they have asked for. And it won't be soon enough.

Did he honestly think we would sit back and allow this to happen and not pay for it? The Taliban even told their people, don't leave - the US won't come in. OH? We were telling them we were coming. We were knocking on their front and back door for crying out loud. They didn't answer, so we just opened up and walked in..... Boy, whatever it is they were smoking, drinking or taking was pretty good stuff to not have fear of retaliation which was imminent after 9/11. Better than any Prozac on our markets. He was very sadly mistaken to think we would allow this to go unchallenged. Others - bigger and better equipped tried and failed, who is this piss ant to think he is any better?

I don't want to see "innocent" people get hurt or killed. Unfortunately some most likely will and my heart goes out to them and their families. But as for Oscummy and his followers, nothing short of death is good enough for them. It's kind of funny, you almost make him out to be Jesus Christ or a Saint. OOPS! Jesus was a Jew..... A Saint is one who has done "good". Don't want to offend you. And certainly don't want to falsely elevate him and the likes of him to a standard they'll never be deserving of.

WOW! IF HE is Justice, we're ALL in trouble. The whole world better get down and pray to All scummy bin laden and ask for forgiveness.
NOT!!!!!!!!!!!!!!!!!!!!!

So tell me, when the others tried to take control like Hitler, what religion did he claim to represent? How about the Japanese? The Koreans? The Communists? SAD DAM? I'd be willing to bet not all of the same! Religion, I think, is being USED to further the gains.
It is the easiest ticket to use to suck people in. People looking for something to believe in. Someone to calm their fears and to instill a sense of "control" in an otherwise tumultuous life, a life filled of struggle. In all actuality, religion has nothing to do with it.
"IF" religion does have anything to do with it, they are getting away with it only under the guise of a false prophet or Anti Christ. Not all of the former wars were fought based on the Jewish either. So, I don't want to hear that Bullshit.

Hell, Jim Jones - remember him? He did the same thing... He suckered hundreds to their deaths too. Bled them dry financially first, then killed them all. ALL IN THE NAME OF RELIGION. Justice???? GIVE ME A BREAK! Religion? This has NOTHING, ZIP, NADDA to do with "religion". This is just another sick bastard that needs eliminated so the rest of us can live in peace.

So, Millions are supposed to bow to him and a few thousand followers? Nah, don't think so. I think they ought to loosen the towel from their head, let the blood circulate a little and while the towel is off, take a bath and use it to dry off with. With that towel wrapped so tight, they had to have a numb brain to think we would allow the attack to go unanswered.

JUSTICE???? IT will prevail, but not by the hand or name of OSCUMMY or anyone like him. It will be by the people of the world who choose to live free of him and those like him if by human intervention. Or God or Christ themselves by holy intervention.

Ok, so I've spoke my piece, what are they - his followers going to do, kill me? I can only die once. Chances are, I'll get to heaven far quicker than they will. Truthfully, I DOUBT they ever see the place. Least I hope not. Talk about a holy war, the heavens would be rumbling for sure..... My greatest sin is the use of my language and detesting those who kill innocent people on purpose. Surely, I can be forgiven for that so as not to be burning in Hell with Oscummy and company.

From one who is sick of the sickos.

CSV is a standard file format which can be directly imported (or
exported to) by Windows programs such as MS Excell, various databases,

etc.

CSV stands for Comma Separated Values.
The values are surrounded by quotes.
So, a CSV file is a text file which looks for example like this:

"67637","12521","211", etc.

The "value" can be also a string of text instead of a number.

It's been a while since I used the Advanced Memory Manager, but
I vaguely recall that it allows you to define the fields to match your
imported files.

Hope this helps.

Pat

## 268. Re: JIL SX-400 Computer Interface

>
>Regards
>
>Mike
>

Here is some info on the SX-400.

Actually obtaining a computer interface might be near impossible

Thre UK importers of the JIL range was Garex

Les

==========

Frequency Convertors:
For additional frequencies not covered by the standard SX400.

RF1030 - 100kHz - 30MHz - Modes SSB/CW also has a Fine Tune control.

RF5080 - 500MHz - 800MHz

RF8014 - 800MHz - 1.4GHz

ACB300
Auto Antenna Control Box: Allows the SX400 to switch in the different
convertors from the keypad. Neccessary if more than one convertor is to
be connected to the SX400 at the same time

SX232 - Computer Interface: Allows a computer to control the SX400.

##########################################################################

SSB Reception on the JIL SX400

By connecting the 10.7MHz IF output on the rear of ths SX400 to the antenna
input of a Communications Receiver or Transceiver and tuning the
Receiver/Transceiver to 10.7MHz and either USB / LSB mode. This allows SSB

reception on the SX400. The tuning on the Receiver/Transceiver may need to be varied a little bit either side of 10.7MHz to get readable audio.

This should also work for the 455kHz IF output on the SX400 if your Receiver/Transceiver can tune to this frequency.

It is a simple matter to make up a lead with a BNC plug on one end of a short length of co-ax and a suitable plug (usually PL259) on the other end to match the antenna input Receiver/Transceiver.

My scanner (BC-780XLT) has a mode called Control Channel Only (Motorola Trunked Sys only) which will allow you to track an entire trunked system using only the control channel. When it finds action it displays the frequency it is on and the talkgroup ID. I just write down every frequency I see flash up on the screen.

Brad

FREE e-mail list catering to SMS text message capable cell phone users in Pennsylvania and FREE Emergency Net Activation call up service for Amateur Radio operators:

http://www.pa-sitrep.com/pasitrep.htm

One small step to take in preparation for any possible future terrorist attack is to be better equipped with regards to communications.

Early warnings and the dissemination of information can be critical. The PA-SitRep [Emergency] Situation Report mailing list is a valuable tool that is free and can be used by anyone with e-mail and or a digital cell phone.

Posts to the list only pertain to major emergency situation throughout the State of Pennsylvania and the list traffic is extremely low volume. Posting protocol mandates a brief summary at the beginning of the message under 100 characters. This protocol caters to the use of digital cell phones and alphanumeric pagers. Users of cell phones and text pagers (as well as those on the list with regular PC e-mail) will receive the emergency traffic posted to the list within seconds. Several subscriber to the PA-SitRep e-mail list contacted me off the list after the Sept 11 attacks and said that the notification to their cell phones was the first news they received of the unfolding tragic events.

For information on how to use your digital cell phone as a text pager, visit the following address:

http://www.pa-sitrep.com/cell.htm

As a subscriber to PA-SitRep, you may post emergency situation reports to the list, but all posts must comply with the posting protocol and messages are limited to emergency situation reports regarding weather emergencies, natural disasters, environmental disasters, civil disturbances, threats and acts of terrorism, major fires, manhunts, and Amateur Radio Emergency Net activations.

For more information on the PA-SitRep mail list please visit the following address:

http://www.pa-sitrep.com/pasitrep.htm

To Subscribe:

http://pa-sitrep.com/mailman/listinfo/pa_pa-sitrep.com

Thanks very much and we'll look forward to your participation.

http://www.PA-SitRep.com

Clearly you haven't a clue about Thomas Paine, so the rest of your posting isn't worth dignifying with a response. I just have an offer. Since scumbags like Osama bin Laden see a quick trip to Paradise if they should die in their terrorist actions, send them over. I'll be happy to help them on their "magic carpet ride" to Paradise. Just give me a couple of days notice so I can stock up on Black Talon and Hydro-Shok loads. Then line 'em up to be waxed!

Skydiver

Very wise it may be the same plug but it isn't an IDE interface. ISTR
that it either brings out each button from the front panel or the uP
bus plus control signals etc. I might be getting confused with the
SX200, I've owned both and still have the 400.

Wether JIL actually made the box that would be required to interface
this connector to a computer I don't know. I've never seen or heard of
one about. IASTR that every conceivable signal was available on that
connecter to make it easy(ier) for third parties to develop the
interface box...

Has anyone recently traveled with a hand held scanner onboard a plane??? Not using it, just packing it in carry on. If so, were there any hassels??

## 281. Re: Hand Held's on Air Planes

Mike

I recently (10 days ago) travelled to USA from NZ and return. I carried my Icom Q7,R3, GPS, Digital Camera, Dive Computer, Palm Pilot etc. No real problems either Internationally or internal USA. United Airlines did inspect the battery compartments on one occasion.

Although I know this is gonna be a real argument over this, I would ask this question: what happened in 1967 that might explain what is going on today? Oh - you may not have been born then. No excuse, go look it up.

Jim in Rochester, N.Y.

p.s. I am not Jewish, but would also ask what happened in WWII to the Jewish people? I rather suspect they are simply looking after their own survival. I am certain they would much rather live in peace, but that seems to be difficult to obtain.

I've been a scanner enthusiast for several years with my modified
PRO-2022. Now I'd like to move to the next level by getting a Icom PCR-1000
and the appropriate software. I hear I want a pcr-1000 with serial number
less than 3500. Is that right? Where can I get a used pcr-1000? Any ideas?

FOLLOW-UP:

I disconnected the extension cable for the external speaker and the hum is gone. If I turn the scanner up pretty loud I can hear it okay, even though the internal speaker is inside the dash. Why would a 6' foot 1/8" mono plug external speaker cable cause this kind of hum, and more importantly, how do I eliminate the hum, but keep the extension cable?

A few years back I bought a like new looking 2004 for $20 at a hamfest that the seller admitted had been hit by lightning. I took it to RS and they had it for 2 months before giving me an estimate. They first said $150 and I agreed, then about 4 weeks later they called and said it would be $250. I ended up selling the scanner for scrap on Ebay. Still got $75 for it as is.

If the scanner was hit by lightning, then it probably isn't worth trying to get it repaired unless you really don't mind losing $20 for the RS estimate hoping to find out otherwise. If it isn't worth it, demand they give it back to you. Sometimes RS presumes you don't want it back if it isn't worth fixing.

Hi,

A friend of mine has 2 bc890zlt scanners. One has been modified to receive cell phones. value?

He also has another one with the ctcss board installed but as yet unmodified value?

Hi Mike,

I still have my JIL SX-400 pressed into service, it's a great scanner. The RS 232 serial port on the back may or not be standard. At the time the scanner was sold JIL indicated that it was compatible with an NEC computer. Whether or not this was an IBM compatible that used the standard serial port configuration is a question I have not been able to answer. I corresponded with the J.I.L. Corporation (about 10 years ago) and they politely told me that they would not release any information due to pending pantents. That seemed strange to me as I was an owner of one of their scanners who simply wanted to make use of an advertised feature. They also indicated that they no longer supported the scanner as they had moved on to producing radar detectors and other such stuff. I got the impression that there weren't any people working there anymore who knew much about the SX series of scanners.

So... if you find out how to make it work, pass the information on to the newsgroup please!

Good luck!

Ender

> FRED

About 5 years ago, I messed up with my soldering iron and made an
inadvertant solder bridge which crapped out an IF transformer, a
transistor, and a ceramic filter. RS fixed it for a flat rate of $49
plus a few bucks for parts. They didn't reverse the "modifications"
that I had installed on mine.

I don't know if they have an official policy regarding this or not.
It may vary from one repair depot to another.

That was probably the NEC APC computer back in those days. It ran DOS but it wasn't 100% "IBM-compatible" (nothing was then). But it should have been a fairly standard printer or serial port. I certainly don't recall any problems with those.

With the winscan780 software, you can let the program run and it logs all the
frequencies being used, as well as the talk group identifiers.

Frankly Jeff, because it's a crappy radio. I just bought one a few days ago, and needless to say, it went back today.

If I had bought a Pro-92 now - and thought - this is what trunking is..?? I would have been pissed.

My Pro-90 runs circles around the Pro-92.

I don't know about Motorola systems, but my Pro-92 works just fine with
LTR systems, albeit it's a bit slow to scan through about 30 freqs while
the Johnson radios we use at work (ambulance company) get the signal
right away. Weird.

For normal, non-trunked systems, it works like a charm too.

the fowling is a list of frequencies of all the fighters and tankers and awacs
units flying over the new york city and washington dc area all i ask is that you
not post them anywere ok
all frequencies are in AM mode
138.43 TAC
360.7 primary with ATC
303.0 tanker
225.8 tanker
295.8 tanker
307.8
281.5
307.85
307.25
325.6
355.2
362.3
385.5
320.9
277.4
if you have any other that are not on this list
please send them to me my e-mail address is slingshot01@yahoo.com thanks

Message-ID: <3bc2df8a$0$42873$272ea4a1@news.execpc.com>
Source record: 58874

I have a BC200XLT that scans Ok. I can input Frequencies OK. If I turn the squelch control I can hear the noise. I can not receive my local traffic. The PD and Fire are in the 155 Mhz range (of cource). I hear nothing. Another scanner right next to it will pick up these frequencies. I have put the scanner in the test mode so some channels have weird frequencies in them and I have heard squelch on a few of those channels and at one time I even heard a voice. What should I be looking at. I do have the schematic and I do know a LITTLE about electronics. Please do not refer me to the online tips for the BC200XLT.I have read them all. The problem with the loss of audio and dial lamp (Q201 being the problem) is not the problem. I have audio and the back light works. If you have any ideas drop me a message. If you would like to e-mail me feel free. dtrickle@coredcs.com Thanks for at least reading this message.

It's more like 60+ different frequencies (networks actually, with 4-10 transmitters all tied to a remote operator), that overlap coast to coast. If you hear one, and it seems to be a little off freq, it is - the transmitters have offsets from the assigned freq, so if an airliner is midway between two sites (when your antenna is over 30,000' up, you have great coverage!) he doesn't get a heterodyne. Most major cities will have 3-6 transmitter/network sites. Used mostly for enroute reports, weather, messages to/from their operations dept's, etc., and tied into a few central communication centers. Tones are the Motorola Sel Call system. All part of Aeronautical Radio - ARINC, a non profit company formed by the airlines to provide mutually accessed radio ground systems.

Haven't even tried with a FC, just use it on the bench (Tenma 4/1 test center, in case inquiring minds want to know, and yes, it's relatively cheap). With the RF cesspool out there these days, the counter is going to have a tough time locking onto one lonely frequency, when it's hearing everything at once (if the counter goes to 1.3 GHz, then it's input is passing any & all electronic impulses from audio to1.3GHz, although the sensitivity rolloff at the upper freqs is probably significant!), so the targeted signal strength is going to have to be head and shoulders above everything else (and that's just for starters - then you have to worry about the quality of the strong signal before the counter will accept it). Kind of like trying to hear someone talking normally across the room at a LOUD party, then hoping it's in a format you understand. The radios signal has the advantage of being pre-tuned, amplified, post-tuned, and generally given a full body massage before you hear it. A band pass filter at the counters input would probably help, but you'd still be hearing umpteen cell channels, simultaneously, with the towers stomping on the mobiles. The scanner can hear signals down in the very looow microvolt levels no problem (however, some start to suck for air when you get much over the 400MHz bands), while lots of freq counters are doing good to hear something at 10 milli-volts (10,000 micro-volts).. I'm just talking about the average garden variety FC here, and there's most likely stuff out there with pre-tuned front ends, rf amps, etc., optimized for this, but they won't be cheap, er, scuse me, inexpensive..... I usually just go for targets of opportunity myself.. (:->))

Cheers
Don

And - it maybe a digital message called Datalink, if heard on an ARINC freq, that has replaced a lot of routine reports that give fuel remaining, outside air temps, winds, etc., that used to be given verbally to ARINC operators and sent on to the appropriate airlines ops dept., at different intervals in the flight. If you hear a beeeee - booooob tone, followed by a voice page for "united 422", or whatever, it's Sel Call.
Tom - haven't I seen your name over in rec.aviation.simulator?? Out there in the KA plains, if I recall??

From: Stephen Waits <steve@waits.net>
Message-ID: <3BC36880.FED2702B@waits.net>
Source record: 58889

I need to go from a PL-259 (on a cable) to my new AOR DA3000. So, I'm looking for an adapter which is SO-239 (UHF Female) to TNC Male, yet none of my San Diego area supply shops seem to have it available.

Do you know where I could find this?

Or, maybe I'm better off cutting the PL-259 off of one end of the cable and soldering on my own TNC male? This cable is the 50' RG8 from Radio Shack which has PL-259's on each end.

If you think soldering is the best, can you describe any techniques involved, and what materials (type of solder particularly).

Thanks,
Steve

## 339. San Diego MCAS Miramar Frequencies

Stephen,
I got mine from Radio Shack here in Harrison, AR (for the same reason), although it's not a r/s product (they carry other stuff). I called their shop tech and he says he has another in stock, so if you want to try a telephone order, it's 870 741-6968, and the tech's name is Bill.
Cheers,
Don

Wanted to pass this link along... I got a great shirt from this guy and the price seems right... Probably the best t-shirt I've seen dealing with this stuff. From what I understand the guy keeps $7 for the cost of the shirt and is donating the rest to the 2 union locals that are spearheading the fund drive for the fallen FDNY members ... locals 94 and 854. Anyways here it is...pass it along...

Haven't been listening to any air freqs lately. Anybody know what
they're using?

I did see a military plane flying over Rockford tonight though. Some
sort of transport, maybe tanker? Heading towards Chicago at about
5:00pm, heading the opposite way (toward milwaukee maybe) about an
hour or so later.

Not sure what it was. Big ol' 4 engine prop thing.

## 363. Differences between Pro-2050, 2052 and 2053?

Newsgroup: rec.radio.scanner
Date: 2001-10-10 12:02:20 UTC
From: jocatch@attglobal.net
Message-ID: <3bc43645.1702934670@news3.ibm.net>
Source record: 58814
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Please forgive if this has been covered before but I haven't been following scanners for a long time.

I live in a suburban area and I am looking for a trunk tracking base scanner. Radio Shack has the Pro-2050 on sale for $179 and the Pro-2052 for $249. The PRO-2053 is not on sale for $299. The 2053 has text display and 300 channels. The other units don't have alpha text display. Performance wise, are there any differences between units or are the amount of features and channels the only difference? Can I assume the older 2050 can't track all the new trunk systems? I live in the Poughkeepsie area of New York State. How do I know what trunk systems are in use here?

I never used a trunk scanner. How do they work? Can I scan both regular and trunk at the same time? How do I set up (find) the trunk frequencies?

Last time I had a scanner, I had about 400 or 500 frequencies but I don't know if most of them are still active or not encrypted. So I don't know if I can get away with a 300 channel or 1000 channel unit. Any advice?

Thanks.

Joe C.

My understanding of the law is that it is against the law to monitor
ENCRYPTED comunications, pager, and telephones. Unencrypted public
service communications should be OK, regardless of how they are
modulated. Otherwise, why would Uniden be working on a digital
scanner?

hmm. now it sounds like you have a leak in a + or ground wire. Could always try a sheilded cable to your speaker. or. is the speaker mounted to the metal in the dash. if it is. then you have sorta a ground loop. and you could get rid of it by throwing a few capacitors in.

Like new in box. Originally posted for $175.00. Was quickly corrected that was too high. Not familiar with the new scanners on the market. just what I paid for this unit. How does $125.00 plus shipping sound. This has everything in the bax. I only used it maybe an hour. Two rc batteries.

Try the antenna in several locations and see where it performs best.

Amplifiers are OK for overcoming transmission line losses, but are no substitute for a good antenna. If you can find a preamp with a low noise figure that covers 800 MHz, it's worth a try. But don't expect miracles.

the cable has a 1/8" mono female plug on the end. I can plug in a
mono-earphone or an external speaker. i have not mounted a permanent
external speaker yet, so it's not like there's a grounding problem.
in addition, when i mount the external speaker, it will be to plastic
dash trim, not to metal.
thanks for the help.

## 387. A novice need help with BC200XLT !!!

Newsgroup: rec.radio.scanner

From: adi doron <adi4z4vg@netvision.net.il>
Message-ID: <3BC4CE8B.9DDC0622@netvision.net.il>
Source record: 58839

Hi,

Tnx for reading, I just got a used BC200XLT

with no manual. Will you help me with these

few questions ?

1) What is the L/O ?

2) can I store limits in 2 memories and do search ?

3) Can the scanning continues after finding a busy

channel, automatic ? say, after few seconds ?

4) When doing a search, how do I store the busy channel frequency

in the memories ? Do I have to enter it manually ?

5) How do I jump between the banks ?

6) The unit is "cell blocked", I can't do

a search with limit start at 870 Mhz, but if I

start, say, at 865 Mhz and up to 900 , I can here some

cell phones,at 895 Mhz So what is blocked ?

7) Can I change the steps ? or are they pre defined ?

8) I have no original charger/adapter, so I use a simple

wall 12V transformer, any problems with that ?

Does the BP200 get recharged while the unit is operating ?

or when it is OFF ?

9) By reading at "strong signals" page I learn that

the manual is very "thin", so can you scan some pages

for me and send them, to put me on the road ?

10) Can you recommend good web pages for the BC200XLT ?

Tnx for your time, ADI

## 388. Re: mobile scanner gets a hum when I accelerate

Source record: 58838

External speakers tend to exhibit more of a ground problem than the internals. This is just my observations and I suppose that it could mostly due to the longer speaker leads.

Double check that you have a GOOD ground connection at the antenna. If this is bad, you can cause a ground loop between the antenna and the negative power lead. I have seen this happen in many mobile installations.

Next go to Radio Shack and buy the 5 amp filter kit they sell. Its a very good filter and will most likely eliminate the problem.

One last thought is that one of the diodes is bad in your alternator. I have seen this happen on fire/police vehicles that won't clean up with a filter.

Go to pro-92.com and check out the information pages. There are user-written instructions that are clearer than the manual. If you browse the archives, you'll probably find every question you can think of asked and answered.

The '8500 doesn't have PL decode. You can throw an
optotrakker on it and PL decode plus some trunking
ability.

Eric

P. S. You could also do that with your 9000 as well.
What's your asking price for it and what condx is it
in?

## 408. Win92 Software (for Pro-92) PSR Question

Newsgroup: rec.radio.scanner
Date: 2001-10-11 12:14:45 UTC
From: Jeff Woertz <jwoertz@bergeys.com>
Message-ID: <tsb3adq7ha9j38@corp.supernews.com>
Source record: 58759
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I was wondering if anyone could shed some light on a strange problem I'm having with adding entries under PSR in the Win92 program...

I'm using version 0.27.

When I insert an entry anywhere within the PSR list, the program always tells me "End freq must be greater than or equal to start freq, and must be in the same frequency range", not matter what I enter in. This happens even when I type an exact copy of an existing entry.

Here's a typical entry:

Airlines 460.6375 460.8625 0.0250 AM

(WON'T EVEN LET ME DUPLICATE THIS LINE!!!)

Am I missing something here?

Any help would be greatly appreciated!

Thanks-

Jeff

## 411. Re: Miami-Dade FL (Kendall.& Hammocks) Police frequencies

Newsgroup: rec.radio.scanner
Date: 2001-10-11 13:57:31 UTC
From: MiamiXJ <miamixj@bellsouth.net>
Message-ID: <6whx7.13666$Xj1.1494355@e3500-atl1.usenetserver.com>
Source record: 58762

Metro is on a trunked EDACS system. You did not say what scanner you are using but you should have no problem listening in with a compatible trunking scanner. I even listen it with a non trunking AOR 8000 by entering the proper frequencies and scanning.

Try this site it has all the local Dade country frequencies:
http://www.kenji-d.com/scanning/

Good Luck

## 412. Whats wrong with WINCAM software site?

Newsgroup: rec.radio.scanner
Date: 2001-10-11 14:23:23 UTC
From: jocatch@attglobal.net
Message-ID: <3bc5aa9a.1798252290@news3.ibm.net>
Source record: 58763

I am trying to download the 9 meg WINCAM demo file off the wincam site but everytime I go to download I get some stupid casino site crap. Has the Wincam site been hacked?

I tried last night to download and it started but I had to abort because it was getting late. Today I get the casino garbage. Any ideas? BTW, is the wincam program a good one to use with the 2052?

Joe C.

Steve,

HRO is Ham Radio Outlet. It's on the east side of Kearny Villa Road in a strip mall, just south of Clairemont Mesa Blvd. As far as I know, SCANFAN has not printed a book since the mid 1990's.

Good Luck,

Alain

Message-ID: <Qyix7.44283$5h5.19933346@news3.rdc2.on.home.com>
Source record: 58764

And perhaps a price figure. If there is anything I hate personally it is either no price or "Make an offer" you want my offer. Nothing I want it for nothing.

Sorry not an attack on anyone especially the original post person. Just a bug I get when reading ads. Maybe I am not interested if your asking price is way out of left field for my personal liking. And as Den here mentioned. Knowing what you are selling would be a great starting point.

Cheers!

## 428. Which handheld scanner to buy?

Newsgroup: rec.radio.scanner
Date: 2001-10-11 23:10:26 UTC
From: "Richard F. Dillon" <rfdillon@hal-pc.org>
Message-ID: <9q58v1$16n3$1@news.hal-pc.org>
Source record: 58777

Does anyone have any advice concerning which handheld scanner to purchase? I live in Houston, TX and was wondering if anyone could recommend one of the Radio Shack scanners for the agencies in the Houston area, e.g. Harris County Sherrif, HPD, Jersey Village fire dept. I don't know much about scanning, but understand that some agencies use trunking systems and others do not. Any frequencies and help would be GREATLY appreciated, TIA, and please reply to rfdillon@hal-pc.org. Thanks so much!

> does anyone know the LCNS for this system? I found them on a site but i
> cant
> seem to get any talkgroup ids. is this even an EDACS system?

I have one Consumers system I heard from Illinois the other day as
follows:

1 855.3625d
2 856.2375v
3 857.3375v
4 858.3375v
5 859.3375v
6 860.3375v

Several conversations were heard and followed thru the system correctly
and confirmed via Etrunk. I think this was the Jackson MI system however
(not sure though).

I would try it in frequency order. That works for more than half the
EDACS systems I have heard.

Source record: 58790

I got a Uniden Bearcat handheld at Radio Shack and it has been great. I once dropped it about 4 feet onto a concrete floor and it still works fine. Mines a 60XLT, I don't think they make it anymore, but the Radio Shack pro-28 model is very similar. In fact I think it's built by Uniden for Radio Shack.

It's very easy to use, has good features and has unbeleivable range. I bought it because it was one of the less expensive scanners and I have been very pleased with it. A trunk tracker is nice (also expensive and complex) but I dont think you'll need one if your just starting out. There is plenty of police / fire / ems to listen to out there that isn't trunked. Get a copy of the book Police Call Plus at Radio Shack. It's less than $20 and will have a ton of frequencies for your area and a bunch of good info for the beginner.

The BC895XLT doesn't cover the VHF Mil air freqs in AM mode so it's not ideal. You should be able to find a used PRO-2045 cheap, they closed out at around $100 when Radio Shack discontinued them. The PRO-26 handhelds went pretty low too when Radio Shack dropped them.

Message-ID: <9q6gu5$ql$1@news.monmouth.com>
Source record: 58792

Can a tactical planner explain why we are even allowing these
communication channels to remain operational ? One would think
it more prudent to aggressively suppress/jam any and all RF
emitters emanating from / within Afghanistan. This would effectively
deprive them of communications of any sort. Forcing an adversary
to resort to alternate methods (if any). At the very least, it would
impede any nefarious plots or responses they could be devising.

This type of jamming would not affect our forces (due to a host
of reasons that opsec constraints make it prudent not to discuss
at the moment, even if it isn't classified).

I thought we had destroyed any and all radio / tv stations anyway
as a matter of routine strategy. How could this station be on the
air ? the entire network should have been destroyed, and replaced
by VOA and/or other psy-ops broadcasting assets.

Is there anything out there for the BC780 scanner other than the Pozilla Winscan780 ? I have had some bug-related issues with that stuff, and no response from Pozilla's customer support. I'd like to get something with similar features, but more reliable.

Thanks.

JT

Hello. I have an Old radio shack scanner from about 8 years ago (60 channel model)

I live in brooklyn heights, NY and i have a clear shot of lower manhattan, staten island and jersey.

Do NYPD, FDNY and EMS use trunked systems? In other words, do i need a trunktracker to monitor these guys here in NYC?

I was considering the BC780XLT, but I really want a handheld.

Please share your NYC scanning experiences as well has your hardware used.

Thank you very much

Ron

Most anything will work, the biggest consideration is intermod. You do not need a trunk tracker, there are trunked systems, but mostly you are going to want to listen to SOD and CityWide PD, which are on the 470 band.
If you can find a Song SC1PC around, they have wonderful sensitivity and work well in the City.
If not, a Bearcat 245XLT will do the job, and it is a trunktracker.
You can contact Stuart Electronics on Parsons Blvd in Queens, he is the distributor. Speak with Peter

Ramsey electronics uset to sell a kit for that. They were "raided" and maybe they don't sell it anymore. I have seem hobbyists making them before and they worked. You will need a schematic and some practice soldering. I would be that Radio Shack has everything you need. AOR has a small board that can be bought overseas that you can install in a AOR8000. There will some soldering skills involved there also. Believe me, it is easy to do. Paul

Anything with ANY intermod problems is no good in NYC, especially in
Manhattan or nearby. Too many pagers, taxis, etc, you'll go nuts
The Sony seems to work well, the 245 has a good rep in this regard.

I have a radio Shack Pro26 for sale thats is in excellent shape and
has the leather case and manual for it. The radio has not had any of
the mods done to it yet. It has a cell mod and a discriminator mod
also.
I am asking 160.00 OBO shipped Priority mail

Paypal Aceepted

email me directly at gregg@alemy.com if interested

Thanks

## 469. Pro-92 vs. 245-XLT

Newsgroup: rec.radio.scanner
Date: 2001-10-13 06:06:47 UTC
From: t1000@webtv.net
Message-ID: <14728-3BC7D9F7-105@storefull-101.iap.bryant.webtv.net>
Source record: 58721

OK! It's about time for me to buy myself a very early Christmas present. I'm excited but also torn between the these two trunktrackers. The 'pro-92 sucks' thread worries me as I WAS leaning towards the '92. Poll: Which one really has the 'edge' in sensitivity, features, ease of use, etc.? Thanks in advance.

## 470. Mod for Pro-29 scan delay?

Newsgroup: rec.radio.scanner

From: noemailedreplysplz@verizon.net
Message-ID: <9q8ouf$k7qf6$6@ID-21921.news.dfncis.de>
Source record: 58722

quoting:
>Does the R3 receive video on all its frequencies, or can it only receive
>video signals in the standard US Television (channels 2-6, 7-13, and
>14-83) range? Thanks.

It receives video from 25mhz to 2.45 Ghz, In AMTV and FMTV modes.

>Also, how sensitive is the receiver?

I'd say it's pretty standard sesitivity wise.

Or, it could be a UHF stub disguised to appear as CB length for photo-op
purposes.
Notice how they are holding the handi talkies in a prominent position
and causing the antenna to wave, as if to say, hey look at me.

During the WTC situation, I monitored the NYPD freqs with an ICOM R2, and it performed magnificently. I'm 60 miles NW of NYC, and used the standard antenna that came with the unit. Yes, the R2 is cheap, but it's good. The only negatives I have is the lack of an internal ferrite antenna for AM BC and no alpha display, but I don't use the radio for that anyway. I'm happy with the R2. Look at the Yaesu VR-120 as well.

During the first few days, I was comparing the R2 with my BC 780XLT on a discone up 30' on the house, and the R2 did just fine, but I had to move it around a bit for optimal reception. I'm going to take a ride tomorrow out to High Point, NJ and see what it hears up there.

The same phone will "repeat" on the same freq, but not necessarily the same one every time - most will have ~6 in it's favorite list. So you might as well save it as a channel. However different mnfr's will have different channels (freqs), spacing, mod swing, and vary which band (902-905 or 925-928) they put the base, with the handset in the other. But once you locate one, you'll hear it again......

AMATEUR RADIO NEWSLINE(tm) REPORT #1261 - OCT. 12, 2001

Amateur Radio Newsline report number 1261 with a release date of Friday, October 12th, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T. The FCC says “yes” to S-D-R. This story is first on Amateur Radio Newsline report number 1261 coming your way right now.

(Billboard Cart Here)

**

EMERGING TECHNOLOGY: FCC APPROVES SDR

The FCC has taken the first steps in making Software Defined Radio or S-D-R a household word. This, as the regulatory agency adopts rules changes to authorize and begin deployment for a new generation of two way radio gear. Amateur Radio Newsline’s Bruce Tennant, K6PZW has more:

--

The Action took place on Friday September 14th at an open meeting in Washington D-C but the announcement was all but lost in the events occurring in New York City and the Pentagon only three days earlier. But what’s important is that this First Report and Order removes many barriers to entry of Software Defined Radio enabled products to the marketplace. And the new rules do allow manufacturers and operators of such devices to reconfigure them after they have been deployed in the field -- including -- possibly -- ham radio gear. This, says the FCC. will speed up the introduction of advanced technology and new services.

The new rules say that software modifications to an S-D-R can be made through what the FCC calls permissive change. The FCC describes this as a totally new form of filing process where the FCC identification number will not have to be changed nor will the equipment have to be relabeled each time its purpose is revised. In fact, the FCC says that it will permit use of an optional electronic label for S-D-R gear in which the FCC identification number could be displayed using a liquid crystal or similar screen. This will allow another party to obtain an equipment approval in its name and take over responsibility for compliance with operating rules that were the domain of the previous licensee.

The Commission has also adopted requirements saying that the license grant holder must take adequate steps to prevent the unauthorized software modification to S-D-R gear. But so far it has not set up any specific security requirements.

In Los Angeles, I’m Bruce Tennant, K6PZW, for the Amateur Radio Newsline.

--

More information on Software Defined Radio is on the web at several locations. The subscription S-D-R forum is the best. Its in cyberspace at www. sdrforum.org (W5YI Report, SDR Website, ARNewsline(tm))

**

AMERICA UNDER ATTACK: SATERN SAYS HAM HELP STILL NEEDED IN NYC

The last federal rescue crew left the World Trade Center disaster scene on Saturday, October 6th leaving New York officials to continue the nearly month-old effort to locate nearly 5,000 bodies buried in the rubble. The Urban Search and Rescue Task Force was the last of 20 Federal Emergency Management Agency teams sent in after the September 11 terrorist attacks that collapsed the twin towers, but their departure does not mean work is winding down. In fact, one volunteer agency says that ham radio operators will still be needed there for some time. Amateur Radio Newsline’s Henry Feinberg reports from near the scene.

--

Its the Salvation Army that needs radio operators to support the organization's World Trade Center relief operation in New York City. And even though it has cut one shift of radio operators the relief agency says that it still needs fresh Amateur Radio ham operators on a daily basis until further notice.

In a statement to the ARRL Letter, Jeff Schneller, N2HPO who is coordinating the Salvation Army Team Emergency Response or SATERN Network says that he is still short of people. Schneller says that the midnight to 8 AM shift has been suspended but they still needs six Amateur Radio operators per shift -- a total of 12 per day -- for the indefinite future.

SATERN needs these operators with their own base station radio gear at the Kennedy Airport warehouse set up from about 8 AM until about 9 PM -- possibly broken into shifts. SATERN also needs operators to ride with trucks to provide communication. If you can help, please visit http://www.satern.org for the latest information.

For the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ, 15 miles from ‘ground zero’ in West Orange New Jersey.

--

The Salvation Army said it's sending additional personnel from the Midwest to New York City to assist those who have been on duty since September 11th. In the area of ham radio, so far some 40 Amateur Radio operators have turned out to help support the Salvation Army relief effort with some coming from as far away as Missouri, North Carolina, Georgia and Florida. (ARRL, SATERN, published news reports)

**

AMERICA UNDER ATTACK: TERRORISM ATTACK CUES EAS DEBATE

When should the nations Emergency Alert System or E-A-S be activated? According to the trade publication Radio World, experts are debating that question because the E-A-S was not used following the September 11th terrorist attacks on New York's World Trade Center and the Pentagon.

Richard Rudman, W6TIA, is the chairman of the Emergency Alert System National Advisory Committee. He also chairs the Los Angeles County local E-A-S group. Rudman says that since the incidents that the national committee has recommended to the FCC that changes be made if a similar attack takes place again.

--

Richard Rudman W6TIA: "The Emergency Alert System -- at the local level -- ties into local emergency management. What I am suggesting is that we have to look at the elements of the critical infrastructure that might possibly have warnings based on the current threat and make sure that they are tired into local emergency management properly so that a decision can be made to issue an E-A-S warning if it is appropriate."

--

The question of whether an E-A-S civil warning should have been triggered has stirred strong debate among those subscribed to an on-line discussion remailer. Rudman says that the job of the E-A-S is to alert the public before an actual event occurs, rather than after the fact. He says that with the immediate live media coverage of the strikes on the two locations that the need for an E-A-S warning was lessened.

--

Richard Rudman W6TIA: "First of all, there wasn't enough information to give a clear warning of what was going on. You might as well have just put out an E-A-S message with one word -- 'panic.'"

"At the time that you get a warning you really have to have other information. I often say that our job -- quite often -- is to take people from the fear of the unknown to fear of the known. If you don't do that right, all you are doing is confusing people and possibly instilling panic."

--

Not everyone agrees. Radio World reports some speculation that there was enough time between the two plane crashes in New York that issuing an E-A-S alert might have saved additional lives.

The E-A-S was developed in 1994 to replace the then aging Emergency Broadcast System as a tool for the President of the United States and others to warn the public about emergency situations. But President George W. Bush chose instead to go directly to the mass media and did not issue an Emergency Alert Notification on the day of the terrorist attacks. As a result, E-A-S played no role in alerting the public to the emergency situations. (Radio World)

**

AMERICA UNDER ATTACK: REPEAL THE ECPA SO AMATEURS CAN MONITOR FOR TERRORISTS

A Michigan ham says its time for congress to repeal the Electronic Communications Privacy Act and lest SWL's monitor the cellular frequencies foe terrorist activities. Lloyd Ellsworth, NE8I, is circulating a letter to congress on the VHF Reflector that says the events of September 11th warrant giving the public the ability to again monitor cellular communications and report possible threats to the nations security onto authorities.

--

Lloyd Ellsworth NE8I: "If you have an area [of spectrum] -- for example 800 to 900 MHz -- where cellphones operate -- a terrorist could also conveniently operate there and not easily be caught. You would have someone specialized who had that [monitoring] equipment to receive him."

--

As Ellsworth's letter notes, the Electronic Communications Privacy Act forbids Americans from using a radio scanner receiver other device from eavesdropping cell phone and certain other radio communications. It also forbids the importation or sale in the country of equipment capable of interception of these signals. But says Ellsworth, these are tools and skills which any knowledgeable terrorist can easily use against America and Americans. And we all know that terrorists don't play by the rules.

--

Lloyd Ellsworth NE8I: "What I am concerned with is if a terrorist is able to freely operate and stands a very small chance of being caught while conducting some communications in that band -- they will."
--

Ellsworth says that repealing the E-C-P-A will even the playing field by giving law abiding Americans a way to listen for suspicious cellular phone calls or other radio signals that can be reported directly to an appropriate agency. Ellsworth notes that this would allow the average citizen, including police and law enforcement to directly to contribute fighting terrorism. Ellsworth adds that this would also put any terrorist on notice that any radio communications he or she may use is likely to be detected, intercepted and used against them. (ARNewsline(tm))

BREAK 1

This is ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, including the Radio Club of El Cajon serving El Cajon California.

(5 sec pause here)

**

ENFORCEMENT: WARNING TO FISHERMEN GETS THEM OFF TWO METERS

It appears as if a warning letter was enough to get at least four ham fishing enthusiasts off of the two meter band. This, according to FCC Special Counsel Riley Hollingsworth who says that he has spoken with some of them and those operators are gone:

--
Riley Hollingsworth: “We had warned eight commercial fisherman in Alaska about operating on two meters without a license on the fishing vessel Evack and the fishing vessel Phoenix. Now four of these fishermen have called us or been in touch with us and apparently in addition to Marine equipment they were using amateur 2 meter handie-talkies. They have assured us that they have stopped using the [Amateur] equipment and our independent information indicates that too.”.
--

Hollingsworth says that his office is still waiting to hear from the other remaining radio users. (FCC, RAIN)

**

ENFORCEMENT: DON’T USE HAM GEAR WHILE HUNTING IF YOU ARE NOT A HAM

Fishing vessels are not the only unlicensed users showing up on the ham bands. In many areas it hunting season, and some of those on the prowl using amateur radio are not hams. The FCC’s Hollingsworth says that the agency has now warned four hunters in West Virginia about using unlicensed amateur gear while out hunting. (FCC, RAIN)

**

ENFORCEMENT: VK JAMMER FINED $3000 (AU)

The United States is not the only place bringing radio regulatory violators to justice. Q- News reports that the Australian Communications Authority has successfully prosecuted a man who cost a courier company an estimated $80,000 when he interfered with its two-way radio system.

In an all to familiar scenario here in the United States, the man who is an ex-employee of the company, played music over the two-way channel when the company was trying to pass on information to its drivers. Prosecution came after a long investigation by the Australian Communications Authority which direction finding equipment to track down the offender. He was fined $3000 after pleading guilty in Sydney's Downing Center Local Court to three charges of operating a radio transmitter without a license.

The Australian Communications Authority New South Wales Compliance Team Manager is Tony George. He says that the A-C-A works hard to detect unauthorized operation of radio transmitters. George added that the agency will act quickly to prosecute offenders. (Q-News, ACA)

**

RESCUE RADIO: HAMS CALLED OUT AFTER TEXAS BRIDGE COLLAPSE

Ham radio was called out after disaster struck in South Texas early on the morning of September 15th. This, after a 240-foot section of the Queen Isabella Causeway between South Padre Island and Port Isabel, Texas, collapsed after barges slammed into the bridge supports.

The mishap sent several vehicles plummeting into the water 80 feet below and claimed 11 lives. The Texas Department of Public Safety contacted John Teer, AK5Z, to request Amateur Radio assistance with communications, because all phone lines between South Padre Island and the mainland had been severed.

The ARRL Letter reports that Teer was able to get volunteers to place at the both the South Padre Island and the Port Isabell Emergency Operations Centers. The Department of Public Safety provided boat transportation to the Island for one operator. The hams then provided 2-meter communication for government and Red Cross officials on for two days until landline telephone and cellular service could be restored. Volunteering their services along with Teer were Pat Patterson, N5SLI, Virginia Scarth, KC5SAM, Ed Scarth, W8AHU, and Gregg Sargent, KAZ0ARS. (ARRL)

**

EMERGENCY COMMS: CELL PHONE LOCATOR DELAYED TO DEC 2005

People waiting for the cellular telephone industry to institute automatic emergency locating technology will have to wait some more. This, after the FCC gives some of the nation's largest mobile phone carriers more time to develop technology that allows emergency personnel to quickly locate callers who dial 911 from wireless phones.

ATT Wireleess, Cingular, Nextel, Sprint and Verizon had sought implementation schedule delays based on problems in obtaining the needed equipment from suppliers. The Federal Communications Commission mandated back in 1996 that all cellular phone companies have some location equipment in place and operational by 2002. Its now been pushed back to December 31st 2005. A similar delay was granted to VoiceStream last year. (Published news reports)

**

RADIO RULES: ANOTHER MASS CORES CONVERSION COMING

The ARRL Letter says that before the switchover to the new and mandatory Commission Registration System on December 3rd, the FCC plans to do a mass conversion from its current Universal Licensing System database.

The FCC established the Commission Registration System or CORES last year and has been in the process of implementing it. Once it becomes mandatory, everyone doing business with the FCC -- licensed or not -- must obtain and use a 10-digit F-C-C Registration Number -- or F-R-N.

The FCC calls the move is a first step toward streamlining fee collection and tracking. Many amateurs registered with the current Universal Licensing System were assigned an F-R-N by CORES in a mass conversion last year. Those who got one were notified by mail. (ARRL, FCC)

**

CONVENTIONS: DARA SAYS PLAN EARLY FOR HAMVENTION 2001

The Dayton Amateur Radio Association says that you should plan now to attend the 51st annual Dayton Hamvention. We have this report on the very special reasons why.

--
Dayton Hamvention 2002 is slated for next May 17 to the 19th. And in keeping with President Bush’s call for America to return to business as usual, the planners of the world's largest amateur radio gathering and trade show have sent out an early flyer. A flyer that tells everyone that the show will go on and that it will be bigger and better than ever before.

How do you make the best even better? How about the Hamvention’s new “All You Can Ride Option” advance purchase package. For a $3 additional fee over the price of a normal $17 advance purchase ticket price, show attendees can ride to and from the HARA Arena an unlimited number of times. If you wait till you get to Dayton it will cost you $22 not including bus service. Buying last minute bus rides will cost another $2 a day or $5 for the weekend. So the $3 in advance is quite a deal.

But that’s not all. If you post mark your ticket order before November 10th, you will also receive a limited edition Hamvention 2002 souvenir program. These normally sell an additional $5 at the door. And early reservations also get entered into the new Hamvention Gift Certificate Contest. Here, two ticket holders will be randomly picked to receive a $250 gift certificate redeemable for cash at Hamvention 2002.

For more information write to the Dayton Hamvention, Post Office Box 964, Dayton Ohio 45401. Or you can visit the Hamvention website at www.hamvention.org.

For the Amateur Radio Newsline, I’m Rick Johnson, KA9VZD.

--

Amateur Radio Newsline is already at work planning the Ham Radio Town Meeting for Hamvention 2002. Details on this in an upcoming newscast. (DARA)

**

CONVENTIONS: ELECTRONIC EQUIPMENT EXPO

Don't forget about the annual Electronic Equipment Expo, which has moved to Seattle from Bellevue this year. The dates are October 24th & 25th at the Stadium Exhibition Center in Seattle Washington and admission is free. The event is co-sponsored by Society of Broadcast Engineers Chapter 16. More information and online registration is at www.emexpo.org. (Portland SBE Newsletter)

**

HAM RADIO BUSNESS: THE HAM RADIO MARKETPLACE.COM

The Ham Radio Market located at is an Internet web board focused on radio equipment and "Ham Radio Stuff". According to President and Founder Bob

Hutchinson, N5CNN, it is operated as a public service for the ham radio community by the Wireless Industry Association which does not itself buy or sell anything. For more information visit http://hamradiomarket.com on the word wide web. (VHF Reflector)

ARNEWSLINE(tm) SUPPORT FUND UPDATE: ARNEWSLINE(tm) IS NOW A 501(C)(3) NOT FOR PROFIT CORPORATION

Ladies and gentlemen, with a long awaited announcement, here is Amateur Radio Newsline Support Fund Administrator, Andy Jarema, N6TCQ:

--

Just about a month ago I recorded an announcement similar to this. It was to be aired on newscast number 1257 which went to air on September 14th. After the events of September 11th, I felt it was best to delay a few weeks. As this is good news, I really do not want to hold off any longer.

Over the past two years we have all been working to bring Amateur Radio Newsline out from its old Westlink Radio Network identity and into its own individuality. This meant several things including a subtle name change, branding of our new name and revamping our website. It also meant becoming a self sustaining not for profit corporation. I am delighted to report that last goal has now been achieved.

Earlier this year, Amateur Radio Newsline Inc. was granted status as a California non-profit corporation. Then, in late August the I-R-S granted our petition and the Amateur Radio Newsline, Inc. became a Federal 501 (c)(3) tax exempt not for profit corporation. Yes, that’s right, as of August 20th, Newsline, as the programming arm of the old Westlink Radio Network is officially gone and the Amateur Radio Newsline as an entity unto itself came into being.

All of this was made possible by a generous donation from a Newsline supporter and benefactor who we are not at liberty to name. But it was that person to whom we at the Amateur Radio Newsline owe a deep debt of gratitude. So we pause a moment and say thank you. Thank your for helping make a dream of almost a quarter of a century become a reality.

We also want to thank the wonderful folks at the Holmsburg Amateur Radio Club in Pennsylvania under whose not-for-profit charter we have operated since incorporating as the Westlink Amateur Radio Network in the 1980’s. They are the people who said to us -- here is a place to start. They have been an

ardent supporter of what we do almost since we began our newscasts in the 1970’s. We will always consider them as being an important part of the Amateur Radio Newsline family.

Our final note this week. Just a reminder that the address for the Amateur Radio Newsline Support Fund still is PO Box 660937, Arcadia, CA 91066. If you missed it, don’t worry. It will be given again at the end of this week's newscast. For the Amateur Radio Newsline Support Fund report, I’m Andy Jarema, N6TCQ.

--

On behalf of everyone involved in the Amateur Radio Newsline, a big thank you to Andy and to our secret contributor for making it all happen. (ARNewsline(tm) Support Fund)

**

T-HUNTING: THE OWLS ARE BACK

Its fall and that means its migration time for numerous species. That includes that ever elusive Burrowing Owls. Here’s Joe Moell, K0OV, with the latest.

--
The fall 2001 migration period for Burrowing owls is beginning right now. Once again, Amateur Radio operators and VHF monitoring enthusiasts are being asked to help researchers study the patterns of this diminishing species. In addition to owls from the plains of Saskatchewan and Alberta, which hams have listened for since 1998, we're now being asked to monitor for 30 owls that were tagged near Moses Lake in eastern Washington state. Vicki Garcia of the University of Arizona wants our help, because it is uncertain if these birds spend the winter in California, or Baja California, or they go eastward to Nevada, Arizona, New Mexico or even to Texas.

The Canadian owl tags are in the 172 MHz range, while the Washington owl tags are near 150 MHz. If you live in a central state from North Dakota to Texas, or in any state to the west of that line, and you have sensitive monitoring equipment for these frequencies, your help is needed. For all the frequencies and monitoring information, go to my Web site, www.homingin.com. HomingIn is one word.

If you aren't on the Web, send e-mail to owls@homingin.com or postal mail to my callbook address. Again, that website is www.homingin.com

Thanks in advance for your help. From southern California, this is Joe Moell K-zero-Oscar-Victor for Amateur Radio Newsline

--

If you missed any of that, simply take your web browser to www.homingin.com. (K0OV)

**

NAMES IN THE NEWS: AMSAT-NA ANNOUNCES BOD ELECTION RESULTS

Some names in the news. This as AMSAT North America announces the results of its recent Board of Directors election. Barry Baines, WD4ASW, Dick Daniels, W4PUJ, Robin Haighton, VE3FRH, and Bill Tynan, W3XO, will retain their seats on the Board for the next two years. Bruce Paige, KK5DO is the first alternate and Dick Hambly, W2GPS is the second alternate. Paige and Hambly will serve until the next election. (ARRL, AMSAT-NA, others)

**

NET OPERATIONS: NEW NORTH TEXAS 222 MHZ NET

Dave Duval, K5UGM, in Dallas says that local hams are trying to start a new North Texas 222 MHz Net. They are also looking for station to check-in. The net operates on 222.105 MHz on Friday nights at 8 Central Time. If you think you can make the path, Bill says that the net will be listening for you. (VHF Reflector)

**

DX

In D-X, word that the same crew that aired 5U2K, 5U3T and 5U5A in March of 2001 will go back to Niger in January and February of 2002. This for a 2 week DXpedition with a larger crew that will include 3 to 4 new operators from Italy and the United States. At least 3 stations will be put on air with special attention paid to 80 and 160 meters. Overall operations will take place on 160 through 10 meters on CW, SSB, RTTY, PSK 31. Another station on 6 meters will operate CW and SSB. Callsigns will be announced at a later date.

Also, the electronic logbook is now on-line for the August 3rd tro the 5th K3L and National Lighthouse Weekend operation from Annapolis, Maryland. Stations who worked the AM Expedition to Thomas Point Lighthouse in the Chesapeake Bay can now check whether they made it to the official logbook. A photographic QSL certificate will soon be available. The QSL manager and other details are now posted at www.amfone.net/K3L. ( Various DX sources)

**

THAT FINAL ITEM: HAM RADIO VS. A RUNAWAY BLIMP

And finally this week, what do you do if a blimp gets away? The answer. Call out ham radio. Amateur Radio Newsline's David Black, KB4KCH has the high flying details.

--

For members of the North Central Missouri Skywarn team…weather spotting means being on the lookout for hail, wall clouds and other severe weather…but the night of September 7th brought a situation they won’t forget anytime soon. Severe
thunderstorms were moving through the Kansas City area that evening, keeping amateur
radio Skywarn groups busy, assisting the National Weather Service. In the town of Trenton,
Glenn Briggs, KB0RPJ, was serving as Net Control for his spotters when heard a

request he didn’t believe at first.

--
IN We were discussing the squall line
OUT find it for them.
--

The blimp belonged to MetLife and had been parked at Kansas City’s Airport. It was scheduled for aerial photography during the following day’s Kansas City Chief’s football game. But mother nature had other plans for this airship as Briggs found out.

--
IN The t’ storms went thru and as it was moored at the downtown airport
OUT flying thru the air
--

For Briggs and his fellow hams, spotting suddenly brought forth a new challenge.

--
IN it was kind of interesting to try to look at the ..
OUT hit by a blimp
--

The blimp was in the air, flying out of control, for at least 45 minutes. The next task was to find it. Briggs says hams started a blimp watch.

--
IN We had begun sending hams out to try to track a NE trajectory
OUT land on a truck
--

A team of amateur radio spotters went to the scene and confirmed that blimp had been found. The crash site was a farm in the community of Chillicothe--that’s about 85 miles northeast of the Kansas City airport. The blimp fell to earth after its self deflation system activated. No one was injured. Members of the Skywarn team assisted with notifying the FAA and other officials in Kansas City. For Glenn Briggs and his fellow North Central Missouri Skywarn team members,
September 7th is a night to remember.

--
IN I would say it’s the most unusual
OUT our spotters will remember for years to come
--

Future weather spotting nets will undoubtedly include the usual…hail, high winds,
maybe even tornadoes. But at least one Skywarn team has the additional experience
of blimp spotting.

From Birmingham, Alabama, I’m David Black, KB4KCH, reporting for the Amateur Radio Newsline(tm).

--

And what else is there to say? (ARNewsline(tm))

**

Nice aural (and aesthetic!) match for shortwave receivers, scanners, TVs.

Last R. Shack batch before becoming 'RCA' brand. These are 'Optimus'.

BRAND NEW IN BOX. See it at a R.S. store: identical to XTS-50AV.

Price: $18.00 for one shipped, $34.00 for two, in continental U.S. only.
They are relatively HEAVY to ship. I can not afford to sell them for less.
If you are really interested I can instead make and send you a digital pik.

Or visit this site for more tech information on this item:

http://www.radioshack.com/search.asp?cookie%5Ftest=1&find=40-1991&SRC=1

Excellent eBay trading reference available upon request for + insurance.

_____

From the R. Shack Web site:

XTS 40 (400-1991) Specifications Faxback Doc. # 6708

Frequency Response:.....150-18,000 Hz
Power Handling:.....20 Watts
(RMS)
Maximum Power:.....40
Watts
Impedance:.....
...8 Ohms
Sound Pressure Level:.....89 +/- 2
dB
Resonance:.....
.....93 Hz
Speaker Complement:..... 4 Inches (10 cm) Full Range
Dimensions:.....5 x 5 x 4 1/2 Inches (HWD)
(12.8 x
12.8 x 11 cm)
Shipping Weight:.....2 lbs
(950g)

Your XTS 40 Audio/Video Speaker is a magnetically shielded speaker system
which is specially designed not to interfere with your TV or computer
monitor. This makes it an economical choice as a center channel or rear
channel speaker for surround sound, as an audio/video speaker, or as a
multimedia video speaker.

## 494. Louisiana Frequencies?

What bullshit!
The APCO 25 is touted as a "common air interface" and despite the level of sophistication needed to decode it, it is clearly not an "encrypted" mode of transmission, .

Here is the best I could come up with... It is the link to Mobile Radio Technology Magazine. I searched that particular magazine, as well as the entire site, and found no article referring to this at all... I would assume that it is bogus... The most recent reference to Uniden and Project 25 (APCO) was the article printed on June 1st about the availability of a digital scanner "In about a year"...

>Which one really has the 'edge' in sensitivity, features, ease of use,
>etc.? Thanks in advance.

The 245 is the better at trunk tracking in marginal signal areas
because it has better sensitivity in the 800 MHz range. The PRO 92 has
better "features" (CTCSS, alpha tags, memory channels) and is a
superior conventional scanner. If you are in an area where the trunked
control channel is received with adequate strength, the PRO 92 will do
trunk tracking well enough to make it a viable choice.

And I have a JAV232 interface for the 8000/8200 that's available if anyone wants it - $200 new from Javiation in the UK, yours for $100 including all cables for BOTH models.

Ok, and there's a JIM75 preamp as well (the one Emtronics sells for $225) for $100 as well...

Both items in mint condition, just don't need them now on the 780...:-)

You've probably found something by now but it is probably a metric thread. Go to Home Depot or similar with the knob. Find a nut that fits & then you will know the thread size. Get a short one. You don't want to go too deep in the radio. Also you can use a couple of nuts to take up the extra length if any.

From: Austin Powers <austinpowers@pobox.com>
Message-ID: <3bc94089_5@Usenet.com>
Source record: 58662

OK, so I own an AOR-1000 and largely I'm very happy with it. I really only use it once a year - when I go the the US Grand Prix and Indianapolis - and the one feature it has that I **REALLY** find useful is that it has a knob on the top that as you turn it tunes through each programmed channel, one at a time with each click.
However, I'm interested in the Radio Shack Pro-89 that allows me to program more than one frequency in for each car.
What I would like is a Pro-89 with the knob on the top that the AOR-1000 has.
Is there a scanner that I do not yet know about that has both the features I want?
Thanks,
Peter

Everyone who listens to the NYPD will notice the dispatchers constantly saying "K." In the old days of morse code communication, a "K" was an invitation to transmit. In other words, when a station finished his tranmission, he would send "K" to tell the other station to reply. It basically meant "over" or "go ahead."

I suspect the NYPD originally used "K" in the same way. But now the dispatchers seem to just thow "K" in anywhere (e.g., "All right K what is your location?" ). Can anyone shed any light on this?

The first person is right. It originated to signify the end of transmission.

But now they stick it in as a filler like you describe just out of habit. And so it goes. Same as how the definition of some words are changed over time through misuse.

Another example: "read direct". As I understand it, the FCC licensing does not technically allow field units to communicate with each other through the repeaters (at least the citywide ones). Proper ettiquette calls for each field unit to relay a message through the central dispatcher. Of course, the repeaters are setup to re-transmit comments from the field (unlike Taxi repeaters). So the intended recipient usually hears it anyhow. To save the dispatcher the trouble of repeating it, the intended recipient would say "read direct central" meaning that he read it directly from the other field unit. However, it now gets used by a field unit speaking to central or even central. Using "direct" in this case is redundant and a simple "read" used to (and often still does) suffice. But they are so much in the habit of saying "read direct" that it's used where it didn't used to be.

So, "K" is not short for "OK" or 10-4. Especially since you will often hear "ten-four K" :-)

Nope, all wrong!!!!!

In the early days of radio, it was required to end transmissions with
the station ID, thus:
a cop might have said:
On the way
KOP 911

The ending just stuck, it is the vestige of saying the station ID at
the end of a transmission.

NYPD was among the first to have two way comms, most depts went on the
air after the rule was discarded.

K

I am selling the newly released ALINCO DJ-X3 "E" version wide band communications receiver. This is the European version offering uncut coverage from 0.1 MHz - 1300 MHz. This radio is brand new in the box, never used, plastic still on display. This little gem offers many features too numerous to mention here. You can check my eBay feedback under OFFDAN, and I can also supply photos of the radio, or answer any questions you may have regarding the radio VIA E-MAIL!

$250.00 shipped, NO TRADES, NO C.O.D.

I will accept a US Postal Money Order , or PAYPAL.
I will also accept a check, but will wait until it clears before shipping.

Again, if you are interested, or have questions, e-mail me and I will be happy to respond.

Dan

Thomas Paine wrote:
>
>
> Osama, a man born into great wealth who has forgone it all and lives in poverty using his wealth to fight for justice... Who among us would piss away $300 million...

Rather than using his Saudi oil $millions to feed the hordes of starving Afghanis, he has chosen to plow his money into recruiting and training an army of terrorists and acquiring weapons of destruction. He is neither noble nor altruistic. He is a madman--impelled by unreasoned hatred and a thirst for violence--who lusts only for power.

The notion of his "fight for justice" is ludicrous. He has never been elected to anything, and in areas where the Taliban have seized control, they have brutally murdered any of their countrymen who opposed their rule. The lifestyle they impose on their victims prohibits girls from going to school and women from working or receiving medical care. They have created many widows throughout Afghanistan, who must resort to begging to support themselves and their children.

> What Osama spoke of, the reason for this war is something the entire world is aware of. The Israelis are committing genocide in Palestine, a land in which the Jews do not belong...

His hatred for Israel and professed concern for the plight of the Palestinians are transparent rationalizations for his anti-western venom. He referred to a period of "80 years" of foreign oppression: so his hatred for the U.S. pre-dates the state of Israel by some 50 years. Most Afghanis are more impoverished and deprived than most Palestinians. Finally, regarding what you call his "reasoned" presentation: if you are a Christian, you too are among the "infidels", to whom he referred frequently and pledges to eliminate.

## 536. FS ASAP: A few things to fund my pacificon visit.

Newsgroup: rec.radio.scanner

From: Evan Platt <none@seebodytoreply.com>
Message-ID: <b8skstsaf4h0c88mriarqfnr0a8bm9dr4n@4ax.com>
Source record: 58687

I have to sell a few items to fund my visit to Pacificon. As I'm under the gun so to speak, I'm requesting somewhat of a rush, to get payment before Friday, and likewise, I will FedEx your item to you (FedEx / UPS shipping included!) Pictures of any / all items available upon request. All prices negoitable, feel free to give me an offer, no matter what.

For Sale:

TrunkTracker II BC245 scanner. Radio, Antenna, Battery. wall charger. I think I've used this a total of 30 minutes, if that. Could probably use a new battery as the battery is 2+ years old (date code 9910), but as it's barely been used, it might still be good.
Physically, radio is in great shape. Serial 96X. I don't think I have the box or anything. $125/BO

Yaesu VX-5 tri band ham radio. Radio, aftermarket (ActiveHunter) antenna, drop charger. I guess I kinda tossed the resale value down the tubes when I 'installed' a aftermarket belt clip. It's the belt clip from the old Motorola pagers. It's 'screwed' in and glued on. It ain't pretty but it beats the cruddy stock clip. Radio is full open for transmit and recieve via software mod. Radio hasn't been 'hard' modified.$175 or best offer

Yaesu Vertex VHF VX-10. Radio, battery (aftermarket, brand new), stock CA-15 charger, stock antenna, and after marker BC-601 rapid charger. and brand new leather case with 'swivel' clip attachment. Radio is 99 (or 102? Can't remember) channels, has scramble board. Radio has a few 'problems' :
Missing PTT 'boot'. $2 part from Yaesu amateur (same part as FT-50). I just haven't had chance to order it. Easy install.
Second problem is the receive. Per techs who have looked at it, the radio needs to be opened, the 'keypad' needs to be dusted off, and reinserted. Symptom is no receive audio, even with squelch full. (radio does 'beep' and vertex tech support has confirmed this is a known problem/sulutioon). Shows monor signs of wear, but a nice unit. $200 / BO

Midland ICOM U-16 look alike. (I'll have the model # later, left radio at work). Radio battery is dated 97, and won't hold a charge, but can be re-celled. It's a high cap battery. Was powered up with a different battery, and worked but exhibited 2 problems: randomly display would flash on and off, and occasionally not power on. Known problem, apparently something with the VCO. Sold as-is. Tech special, $75. Radio, rapid charger, antenna, battery. Cosmetically, radio not bad.

Again, I _NEED_ money for Pacificon, so all prices negotiable. Make me an offer, as long as I get money by Friday. :)

Evan in Sunnyvale, California

(Of course, we can also meet at Pacificon).

e-mail me at evan at espphotography dot com

No such rule, to my knowledge as a former police dispatcher. Some departments have a rule (your "proper etiquette") that prohibits car-to-car traffic on the dispatch channel, in order to avoid tying up the frequency. Officers are supposed to request clearance from the dispatcher to contact another officer directly, and some agencies will direct the two officers to go to a separate channel with their traffic. It all depends on dept. procedures. As long as the frequencies are properly licensed for mobile repeater use as well as base use, the FCC could care less.

Mark

In the days of 1980 when I played NYPD dispatcher we used the term K to mean end of communique. That was it. Today I have no idea other than bad radio training why it is used.

> Is speech inversion encryption or encoded?

Encryption

As an example, any form of modulation, AM, FM, SSB, Digital, etc., "encodes"
the audio in the process of sending it over the airwaves. If, in addition,
the signal is processed by an scrambling system, either analog (such as
speech inversion) or digital (DES), then the applicable U.S. Statues
regarding privacy apply. The law makes this point in no uncertain terms,
the agency involved has to make their signals secure through scrambling,
else they fall within the public domain. Merely changing the type of
modulation isn't enough.

FYI, I am a former police dispatcher, and had reason to read up on the laws
at the time, as the chief wanted to be able to shut out some reporters. He
felt that he could just decree "You can't listen to our radio traffic." and
that would be good enough. We had to dig out the Federal and state laws for
him before he tried it and made a fool of himself.

OK, it's not the same as a bad web address, you're right. But what the guy did isn't reporting a "defective" web page, he was hacking the site for personal gain. When you said the web page was "defective", I took it to mean it was defective to a legitimate user ("Your link to xyz.com is not working." or something to that effect). You hack a site and download material not intended for the general user, then you are committing a crime, and should be punished. This is supposed to be a problem? Imagine this scenario: "Did you know that the lock on the back door of your business is defective, and the alarm doesn't cover that area? Here, to prove it, I broke into your store last night and stole these diamond rings. Do you want to hire me to fix it?" The next sound you hear will be the cell door slamming.

"Did you know under
the new anti-terrorism law that if you access a web site while at
work to do Christmas shopping, without permission from the boss, you have just violated the law and are subject to up to 10 years in prison?"

> From The Washington Post:

> making a personal Internet purchase on company time.
>

Well, first off, surveillance is not the same thing as being arrested and jailed. Second, it was an amendment to the proposed law, and didn't go through. Third, the quote you supply applies to accessing a computer "without authorization", the example Feingold uses would suggest that the employee has authorized access to the computer, but is using it for personal instead of company business. Nothing new about that, many companies (including the one I work for), don't allow company computers to be used for non-company business. Fourth, Feingold is a wacko, left-wing liberal who

probably thinks the Nat. Weather Service is illegal government interferance with Mother Nature.

What's all wrong? "K" certainly WAS used in telegraphy as "end of
transmissio/invitation to transmit." And what do you offer? That "K"
is short for KOP911??? Most, if not all, of the NYPD callsigns start
with "W." If your theory is correct, why not use "W"?

>

FCC never required callsigns be given every time a mic was unkeyed,
only at the end of the final transmission. The "K" is heard throughout
exchanges, not just at the end.

I think Bill Smith had the right answer: The "K" IS leftover from the
telegraphic "end of transmission," but its usage has evolved to mean
almost anything (or nothing). Mostly, I think it's used today to mean
OK.

Bill is also correct on "read direct." Originally (before repeaters)
it meant the officer heard a transmission from another officer
directly. In modern usage, it SHOULD mean an officer heard another
officer through the repeater, but it is mis-used as having read
ANYTHING over the air (including the dispatcher, or the dispatcher
hearing the officer).

Anyone have any advice on using NiMH in a PRO-92? They last longer, or have less "memory" or anything else good?

I just bought a PRO-92 and after reading the manual a few times have tracked local trunks for the first time, but I'm a little late! The Fairfax County VA PD appears to have gone digital.

Same with Fairfax County, VA Fire. They use the term "direct" all the time now instead of simply when copying a transmission from another mobile directly without dispatch relay.

Distribution:

Hmmm. Ya got me. I did a quick search and found this in a list of cell phone features:

- Finger/Searcher Viewer : Four Finger Support, Neighbor & Active PN List

Could this be related to the "finger" command used in TCP/IP in which you can get info on a given IP address. Finger is one of the commands in TCP/IP, like Ping, Telnet, etc.

When I try to program in talkgroup #8439 into my brand new Pro-92 (
10/12/2001 ) Radio Scanner it just automatically changes into 8432.
Why is this? This is a valid talkgroup for the Southwest Regional
Communication System in Cuyahoga County Ohio. It belongs to the
Strongsville Ohio Fire Department.
Please e-mail any and all answers. Thanks a million in advance.
Is the 20-522B Pro-92 a good choice?

Please e-mail all responses to the following e-mail addresses:

OK. It has to do ith rake receivers used to combat multipath.

See the site below:

http://www.chipcenter.com/TestandMeasurement/products_201-300/prod205.html

What's this finger and pilot stuff, you might ask? Well, these are terms associated with rake receivers, systems that use baseband correlators to individually process several signal multipath components. Correlator outputs are then combined to improve a communications path's reliability.

Under IS-95, both base station and mobile receivers use rake receivers. Each correlator in such a receiver is called a rake-receiver finger. The base station combines the outputs of its rake-receiver fingers non-coherently, that is, the outputs are added in power. Mobile receivers combine rake-receiver finger outputs coherently (outputs are added in voltage). Typically, mobile receivers use three rake-receiver fingers and base station receivers use four or five.

When a wideband signal is received over a multipath channel, multiple delays appear at the receiver. By attaching a "handle" to a plot of the multipath returns, a picture of an ordinary garden rake is created. That's where the term rake receiver comes from.

Pilot strength is the ratio of received pilot energy to total received energy, or total power spectral density. When more than one rake-receiver finger is used to process the multipath from one pilot, pilot strength, expressed in deciBels, is the sum of the values of each of the multipath components to be combined by rake-receiver fingers. In the PocketDM, pilot lists are designated and color-coded as Active, Candidate, Neighbor, or Remaining cells. These are also visually marked, and are available in realtime or in a playback mode similar to the RF power measurement mode.

Hello All. This is for those of us who have been monitoring in Nassau County NY for a few years. Before the County went to a trunked system, the Medical Center had a repeater which was used for security. I was asked to research for the current administration what frequency/PL etc.. was used for a possible new use. The frequency is still licensed to the Medical Center. Does anyone happen to know what the PL was or is??? Any help is greatly appreciated, and any info I can give in exchange is without a doubt offered.

Please email me any info!

Thanks!

An open question for discussion....

Recently I've noticed many folks selling radio items, and offering PAYPAL as a payment option. Those who use PAYPAL know that PAYPAL charges the SELLER app. 3% of the selling price in fees.

As a result, many seller are stating that they will accept PAYPAL, but the buyer must pay an extra 3%.

Is this legal? Within the PAYPAL rules?

I've even seen it done within eBay auction postings where an extra 3% or something to that effect is required for PAYPAL. Does this violate eBay rules?

Dan

I had a Wavehawk and could not sell it fast enough. The programming is very confusing, the squelch action was terrible and it overloaded more easily than any other radio I've ever had. There was a cell mod published a while back, but who cares with performance like this? Get a PRO-43 for mil-air, you'll be much happier.

## 567. Receiving Satellite Signals w/ a Pro-2004 Scanner & an 18" DSS Dish

Newsgroup: rec.radio.scanner
Date: 2001-10-16 00:24:19 UTC
From: db77619@aol.com
Message-ID: <20011015202419.01817.00000067@mb-fb.aol.com>
Source record: 58618

Does anyone know if I will be able to pick up satellite signals using a Pro-2004 scanner hooked up to a 18" DSS dish?
If so what sort of stuff would I pick up?
When I used to be into TVRO I had a book on satellite TV and satellites in general and I remember there were all sorts of sub-carriers to monitor among other things.
I realize that the DSS dishes depending on what provider you subscribe to(mine is RCA system. Provider is Directv) you have to point your dish in a certain direction and leave it there. However, it will be interesting to see what you can pick up.
Whatever I pick up I will post a list to this NG for others to reads and tryout.
Thanks in advance and happy scanning.

## 568. My visit to Rat Shack

I was in the mall tonight and stopped into see the Pro-93. Here is the abridged transcript:

Radio Shack: Hi, can we help you?

Me: sure, I'd like to see the Pro-93

RS: The Pro-96 is better.

Me: Why?

RS: Because it is.

Me: Why:

RS: There is no 93. Only a 96.

Me: It's new. Due in stores this week.

RS: Let me look in the catalog. Oh, here it is. The stores won't have it.

Me: Yes they will.

RS. You should get a Pro-94. It's better.

Me: Why.

RS: 1000 memory channels. Dual channel trunking.

Me: Why is it better?

RS: Because it's a 94, and not a 93 or 92.

Me: Excuse me, while my head explodes. AAGGHHH

Jeff

> Is this legal? Within the PAYPAL rules?

I don't know about it's legality (the quote below says that it's illegal in several states), but it's against the rules of PayPal, Visa, and MasterCard.

In PayPal's Terms Of Service: "No Surcharges. Under Visa and MasterCard regulations and the laws of several states, including California, merchants may not charge a fee to the buyer for accepting credit card payments (often called a "surcharge"). You agree that you will not impose a surcharge or any other fee for accepting PayPal as payment."

When I accept PayPal on auctions, I eat the 1.4% + 30¢ (I've got a PayPal Preferred Business account) fee. It's cheaper than a real merchant account, and many people like the security associated with it.

People who can't handle a miniscule fee like that shouldn't be accepting payments by PayPal -- checks are free, but take a while. *shrugs*

Source record: 58624
Cross-posted to: alt.radio.scanner,rec.radio.scanner

well i dont take my hat off to the NYPD dispatchers for one thing they
make alot of eras and puting the cops in the field in danger, because of a
dispatcher the missed catching the eastside rapeist , and if you hurd the
recordings the day the world trade center was atacked you will here the
dispatcher giveing a 10-13 as the building is falling , we all know that a
10-13 in new york city means officer needs help that i understand but when
the dispatcher gave out a 10-13 there at alot of cops rushed to that location
putting their own safety at risk, the dispatcher has to your their brain
first, we all know how big the world trade center was and when a cop screems
over the radio that the building is comeing down to get out of the way well
the dispatcher did not haveto say 10-13 their at big big era
and who ever works on the radio system for both NYPD & NYFD well they
need to find another line of work cause it SUCKS they took down all of the
station master antennas at all their sights and replaced them with cheep
dimond antennas and all of the walkie talkies are set for low power and the
head sets the dispatchers use from time to time you cant under stand what
they are saying
also if you call 911 to report a crime well dont expect to much help
their cause
they only pass to the dispatcher half or just a small part of your report i
have tested this from time to time and you say male white going north and the
dispatcher will say male white going south putting the cops at risk and the
cops in the field are getting upset cause some of the dispatchers cant read
english clearly or speek good english
its time for new york city police and fire units to stop waisting money
on a
system that dose not work the old radio system was much better and they must
retrain most if not all of the dispatchers on how to use the system they talk
on so the units in the field can understand them and better help the public

In reply to the message from jaypeggin@aol.com (Jaypeggin) on 15 Oct 2001 22:19:42 GMT, here's my humble comment...:

I've got the Alinco DJX-10 handheld. I like it a lot. I've been monitoring the CAP flights here in the Wash DC area with it. It receives DC to Daylight (cell blocked) but doesn't follow trunked systems. I have another scanner for that (radio shack pro-2067). Seems that a single scanner wouldn't do everything I wanted, so I have a few.... (I also have an old RS Pro-2030 that I modified years ago to receive the cell freqs.)

Yep, no different than the fee's visa and mastercard merchants are charged.
I use paypal often, both paying and recieving. I often times see those
fee's worked into the shipping and handling, but I refrain from that.
I can get the money, directly deposited in my bank account, within 3
working days. I'll pay that 3% for that convienance.

John

I use "Energizer" brand NiMH batteries (got 'em cheap at Home Depot)
in my PRO-92A with no problems. A set won't last as long as the usual
carbon-alkaline batteries, but long term cost is cheaper and more
convenient. When I get the low battery alarm, I just throw the 6 battery
"clip" on my MAHA charger and it is ready to go in 30 - 45 minutes. Two
NiMH sets plus a set of carbon-alkaline backups and I'm pretty much set for
anything!

NiMH shluld last MUCH longer than anything else but perhaps Lithium
(NOT rechargable).
You maynot be fully recharging the batts, or you may have bought low
capacity NiMH. Radio Shack has 1700 MaH, they last something like 12
hours in my Sony

My Energizers are only 1200 MAH which might explain some difference in the usable life per charge. I don't run my 92B for that long at a time so my "hours per recharge" is impossible to accurately calculate. Beyond that, I'm not sure what the relative power consumption rates are for the 92B vs your Sony. There are too many variables to draw serious conclusions. I rely on the MAHA charger to automatically decide when to taper and trickle the charge, so I feel fairly confident aht undercharging is not the problem here.

Bottom line, however, is that NiMH's area good choice for the PRO-92 - IMHO.

The seller is simply trying to recoup his additional costs of accepting PayPal.
If you don't like his terms, don't do business with him. Pretty simple,
actually.

Well, the 1700 are just about 50% more powerful, so that's the way to
go.
With those, you won't bother with alkaline (Al Kaline, played for the
Tigers. GREAT arm!)

I think it's shitty and stopped using PayPal since their fees appeared.

Just as a small technical note - those sellers should be adding 3.1% if
PayPal charges 3% of the transaction. Then it'd work out more
accurately.

i.e. $100.00 + 3.1% = 103.10; $103.10 - 3% = $100.01

hmm.. how anal retentive is that?

It is not only illegal (common law states you can't charge extra for accepting a "normal" means of payment) but more importantly if EBAY finds out about it they will reprimand the seller and cancel the auction if seller makes no changes. I had this happen to me when I sold a fairly big ticket item and mistakenly asked for 3% if paypal CC was used. I knew the law, had just studied it in school, but wasn't thinking right and when EBAY asked I quickly changed my policy.

No, their slogan is correct: "You Have Questions, We Have Answers".
Nowhere in that statement nor anywhere else do they say that the answers you
get will bear any relation to the questions you asked. It's an old
political trick, grant an interview to a reporter, but insist on one
condition - only the answers may be reported, not the questions.

Reporter: "We have obtained police records that show you were arrested for
soliciting a prostitute, but the charges were dismissed by the D.A. What is
your response?"

Politician: "Under my administration, we have reduced the budget by 8%."

Reporter: "You didn't answer my question."

Pol: "And at the same time we have increased school funding by 10%."

The Nixon Whitehouse was adept at this sort of thing. Wonder where all
those people went to after Tricky Dick resigned? You don't think???

Does anyone have this ruling, or know where I can get it?
There have been rumors lately that the city I live in is becoming the latest city to ban scanners, and I'd like to keep mine.......

Late in 1993, the FCC issued another declaratory ruling that upholds the idea of Federal preemption of any state or local regulation that would impinge on the ability of licensed amateur radio operators to have mobile ham equipment that was incidentally capable of receiving police or other frequencies. The docket number for this ruling is P.R. 91-36.

Respond in email, please, I rarely get to check the newsgroups.

# 599. Re: Receiving Satellite Signals w/ a Pro-2004 Scanner & an 18" DSS Dish

Newsgroup: rec.radio.scanner
Date: 2001-10-16 12:08:47 UTC
From: Steve Fleckenstein <spfleck@citlink.net>
Message-ID: <jrVy7.606$UD1.16645@news-west.eli.net>
Source record: 58550

I think there is a significant amount of DC voltage flowing between the dish
and a satellite receiver for polarity control.

Steve

| Does anyone know if I will be able to pick up satellite signals using a
| Pro-2004 scanner hooked up to a 18" DSS dish?
| If so what sort of stuff would I pick up?
| When I used to be into TVRO I had a book on satellite TV and satellites in
| general and I remember there were all sorts of sub-carriers to monitor
among
| other things.
| I realize that the DSS dishes depending on what provider you subscribe
to(mine
| is RCA system. Provider is Directv) you have to point your dish in a
certain
| direction and leave it there. However, it will be interesting to see what
you
| can pick up.
| Whatever I pick up I will post a list to this NG for others to reads and
| tryout.
| Thanks in advance and happy scanning.

## 600. Re: Is PRO-92 really better than BC-245?

> Can the PRO-92 have freqs downloaded from a computer
> into it like the 245?

yes, but i don't think a computer can control and log searches etc.

> What are the other disadvantages?

For me the 245 is better because the 800mhz trunked systems come in
clear. With the pro-92 there is so much flutter in the audio that you
can't listen to the trunked systems. Put them side by side and I
generally prefer the 245, it scans faster, seems to have better
senitivity, works much better with trunked systems's talkgroup IDs,....
...if only it had alpha tags......

If you don't need a handheld, try the PRO-2052. I have one and it handles trunking pretty well. Its a good scanner for MilAir as well (90% of my listening is MilAir). No overload problems even in the city with Discone antenna and a Scanner Beam (not Grove! but the $20.00 less AntennaWarehouse.com beam).

Why not set the scanner to the frequency of a known service, e.g.
ambulance, and determine whether you can hear the paramedics talking?
(Of, course, you would need to know the freqs of your area before you can
do this).

You might be extremely lucky to get a counter of that precision for under
$50, even used.

I don't want to sound too facetious, but one of the things you can learn
from a frequency counter is how many things you can do without a frequency
counter.

I don't believe the 3% bidders/buyers will save by paying with check really impacts what they bid/pay for an item -- it's more of an afterthought. So when you do that you are losing 3% if someone pays by check whereas before you were losing 3% if someone paid by Paypal. At least the 3% that goes to paypal is for a good and popular service that might help people feel more comfortable with bidding.

>trunking
>and cell phone?

Citywide is not used very much. No units are dispatched from Citywide. In fact, if you listen much you will notice that the voice on Citywide is the same as the voice on Manhattan.

It's primary function now is to receive relays from the boroughs so that staff chiefs have a single frequency to monitor. Obviously this started in the days before scanning receivers. And in the tradition of the department, nothing changes just because technology changes.

I would like to clear something up here:

While certain laws may exist on the books in some states regarding surcharges for credit cards, etc., these laws DO NOT apply to private transactions between individuals. They are intended to protect consumers from the so-called "jaws" of the merchant community. Most states think that their resident consumers are idiots.

No laws are broken when two private individuals agree to any price at all, even if it's ten times retail. As long as both parties agree to the transaction, and no misrepresentation (fraud) has taken place, you can charge me whatever you feel like. It's my choice to pay it or not.

In other words, there is no law in any state which prevent me from selling you my beat up lawn mower for $100 more than it cost me five years ago. Caveat Emptor.

That being said, there may be other agreements between you and the service you use, i.e., PayPal which prohibit you from charging additional fees. While doing so might constitute a breach of your agreement with said service, that fact does not make the transaction illegal.

When a merchant (or anyone) adds in the cost of service (say 3%) to the price of an item, and then offers a discount for cash or check, this constitutes a legitimate way of getting around the service agreement and existing laws, though one might argue otherwise.

I've noticed that by vehicle mounted BC780XLT has a problem, but only in the afternoon. I get this odd sound life feedback or raspyness and pick up many "birdies". In the morning everything sounds fine and then when I leave my office all freqs sound garbled just a bit and the scanner stops on to many freqs with just noise.

What is causing this and how can I fix it?

>91-36.

See (Federal Register) 58FR48459 or FCC/DA # FCC-93-410. It was
official MO&O (Memorandum Opinion and Order) on 9/3/93.

I can't find the text on the FCC's FTP server. It doesn't go back far
enough.

In any case, I would just make the citation, point to the description
on the FCC's web site and then put the burden on them to answer why it
shouldn't apply.

One note: be sure to keep copies of your license, and the law citation
with your scanner in the car. If you should happen to let someone
else use your car, and they get stopped, they could get slapped with
the anti-scanner law and you could still lose the radio in your car.
Your call sign and even a copy of your license ought to give the
officer a chance to think.

Frankly, I think this anti-scanner thing is a waste of public effort.
The city council in your area ought to have their collective heads
examined.

Has anyone tried attaching a SW antenna to an IC R2?
Would this be a waste of time? Should I buy a proper SW
receiver instead?

$150 (maybe less) will get you an ICOM R2, which is a nice portable with good sound, computer programmable. I've got one and like it a lot. The only thing I wish it had is alpha tagging.

You had a question, he had an answer. If you expect it to be an
accurate answer, go find someone who knows communications law.
Otherwise, you got what you paid for.

I just don't get it! You're asking a guy who wants to sell you stuff
and who isn't paid all that much to do it, how the damned things work
from the law itself to the quantum mechanical level, and you expect
accuracy? I don't expect an accurate answer from Sears, Circuit City,
Best Buy, or any major electronics retail chain out there. Why should
Radio Shack be any different?

There's your answer. Now what was the question!

IIRC, it would still violate VISA/MC's 'Same as cash' policy, which is
a part of their merchant agreement.

But that does not forbid the CREDIT CARD COMPANY from charging their merchant usage fee (3%). The CC company is neither the bidder nor the seller. PayPal is merely a credit card collection agent.

This same issue came up when government agencies (state and federal) first allowed taxes to be charged to a credit card. By law, the government could not be charged the merchant fee, so such was passed on to the taxpayer.

The same concept is applied to the auction. The auction fixes the amount due to the seller. One doesn't see the auction price being reduced by the cost of a USPS money order, and only the difference remitted.

>If you don't need a handheld, try the PRO-2052.

But don't expect to get the most interesting of the Military comms with the Pro-2052, because it lacks AM mode in the 138-144 range, where a god deal of the air-air comms are found.

Get a Pro-2035 or Pro-2042 for a desk model. For a handheld, get a Pro-26, Pro-43, Pro-60, or an old BC-2500XLT (if you can find one), and you will hear it all.

> AL STERN Satellite Beach FL

I will agree that the PRO-2052 lacks the ability to switch modes (FM to AM) in certain frequency ranges. I listed the PRO-2052 simply because it does a good job (not as good as the older PRO-2035 or PRO-2006) in the MilAir band and because its still available at RadioShacks.

By far if you're willing to look for a used scanner get yourself a PRO-2035! I now have 3 strictly for MilAir an love them! I have 2 PRO-2006's VERY good but only 400 channels (you'll see you'll need lots of channels when you getinto MilAir). The only problem with finding PRO-2006's used is the cost. TOO Expensive!!! The reason why PRO-2006's go for use a high price for an old used scanner is because its one of the few which can receive the worthless cellphone bands.

You cant charge for the extra 3% but you can advertise a 3% discount for payment by check or money order.
Check the states where it is illegal and they will tell you this is acceptable, you will see this at all trade and computer shows

Dude you can do what you want to its a private exchange. If your a bizz thats a different story. You have every right to make up the 3 percent and if stated in your auction and the person wins the bid thats the contract.

It certainly does, and if you report the auction to safe harbor, they
will warn the seller that it is not enforceable, and violates the
listing agreement.

Whether it is legal under other circumstances depends. eBay is based
in California, and the reason it is not permitted on eBay is real
simple. Credit card surcharges are not permitted under California Law.

So if either party to the transaction or the venue is in California
(and perhaps some other states), credit card surcharges are not
permitted, period....

On the PRO 92 with a $25 Dollar cable and Free software you can upload and conversely download and save the full scanner setup and all freqs. As well as modifying a ton of options like Search Banks and Backlight On Time, it is really modifiable. The 245 can still hold its own in many ways, but I truly feel the Alpha Tag capability on the PRO 92 is a deciding edge. It is a really nice feature. The Pro 92 has been around 1 1/2 years now. The only confusing difference I hear is that people sometimes knock the audio quality on the Pro 92 in the 800 bands while I personally have never had any problems or personally noticed anyone elses problems, I have been told it several times on these newsgroups. I hate to say it, but I do prefer my Pro 92 when all things are considered, enough so that I sold my 245. But just as many people will say they love the 245. I might suggest if you want I'll email you some audio of my Pro 92 and if some one wants maybe they could send you some audio of a 245 and you could get some help that way? Just post if you want any more help.

I do NOT work at Radio Shack nor know anyone who does. I have been to them in Florida, Washington and Texas with nothing but nightmares! Same as your story. BUT SHOCK OF SHOCK! I went to the Rad Shack here in Altoona, Iowa, small one horse town to get a Pro 92. Not only was the salesman intelligent, for example he understood the differences in band searches and the difference between dual trunking and multi trunking, but when I decided I wanted a Pro 92 afterall he didn't DID NOT! try to sell me anything else. He then almost killed me by offering to sell me the display model that was already fully programmed with all our local freqs, 800 freqs and talk groups. I took that one and it was ACTUALLY the right freqs.!!!!!!!!!! Now here is the one that did kill me, he gave me the web address (Pro92.com) that I could get the data cable and software for $25 bucks! 1/4 of their price. He did say if I wanted he would be perfectly happy to sell me their cable and software but he strongly recommended ordering it from the website. I wonder if he is getting kickbacks from that guy? Oh well, the end result is, I will NEVER EVER for the rest of my life, go to another Rad Shack but this one. This guy and his probably 25 year old assistant were informed, nice and did NOT pressure me. I hate to say it, but not every Rad Shack is awful, just every one but the one in Altoona, Iowa.

The T

I am getting ready to take my test and need a ham radio. I am going to be in the VHF/UHF range. I'm looking for any type of rig,mobile, or HT.Please be specific on what units cover as I am far from knowing what alot of them do.I have a Radio Shack Pro-76 LN,200ch, handheld, covers up to 512mhz, with box and power adapter,only 4 months old! paid $105. Also a Uniden BC855XLT covers up to 956mhz, 100 ch. unblocked desktop works great! Still using both of these but have to get rid of some toys for my new found passion! Will trade both if the deal is right! Make me an offer!
Thanks and 73
Rob
crandall@ee.net

42010006 Questionable Items: Listing Policies: Credit Card Surcharges

Credit Card Surcharges

An eBay seller may not charge a fee, often called a "credit card surcharge,"
when accepting credit card payments. This surcharge, which is an added cost
to the buyer over and above the final sale price and shipping/handling, is
not allowed under the laws of many states, including California. For more
information,

see:
http://www-s2.visa.com/fb/merch/biz/govt/surcharge.html
http://www.mastercard.com/consumer/cust_serv.html

Message-ID: <RL3z7.7303$Ng7.1157426@news02.optonline.net>
Source record: 58450

be careful on this one... ham radio operators are exempt to the extent that their Ham 2-way radio may have extended receive capability, but that does NOT give them exemtion from scanner laws.

besides, you will probably have no success getting a patrolman at the roadside to read your documents and let you go. more likely, he/she will give you a ticket and/or confiscate your scanner depending on the way your local law is written, and then you have the fun of going to court, with a lawyer, and convincing a judge you're exempt and should get your radio back.

This is the same "Stevie Boy" who got his sorry ass kicked off of 3.950
for being too much of a "loose cannon" (imagine that !)

He also used to check into the Eastern Regional Patriots Militia net
that used to meet on Mon, Tue, Thur nights on 3.860 LSB at 8:00 PM
Eastern time, until he surrendered his ham licence (aa8dp)
to Reily Hollingsworth.....because he believed the FCC was an
"..agent of the (zionist) occupational UN government".

Someone said he also had a webpage that stated this
kooky claims of his, but we can't find it. Oh well no loss.

Looks like we have here yet another real genuine radio militia gun-nut screwball eh folks?

Hopefully the Kentucky State police will put this fruitcake into a pine box six-feet
underground
very soon!

NY State has that law as well. If you read your local law some have ways to get around it such as NY State states that the chief of Police in your home town can issue a permit to have a scanner. I was a Vol. Fire Fighter and I am a FCC Lic Radio Repair Tech and needed my scanner in my truck to test freqs on my towers. The local PD gave me a letter authorizing me to have the scanner. Try calling the police dept. This will help if you get stopped when their bosses signature is saying its ok for you to have a scanner in your car.

What the heck is all the discussion?

Just don't accept Pay Pal in your auction. If the winning bidder insists, tell him he'll have to pay an additional 3% handling charge for processing the package.

Better yet, tell the winning bidder that they'll have to come up with a Postal Money Order and make that very clear in the terms of the auction.

Some of the discussion seems to assume that the winning bidder has a right to use PayPal. Not so if clearly indicated to the contrary in the auction listing.

WRONG!

If the contract says that part of the deal is you have to kill
someone, and it says that in the auction, is it legal? Of course not.

A condition in a contract may not be in violation of the applicable
law, depending upon the contract, either that portion is void, or the
whole contract is void.

In the case of eBay for example, the applicable law is California law,
and if California law says it is illegal, you cannot enforce it.

How much would like to bet. The problem is that such a transaction is
NOT just between individuals. In general part of the merchant
agreement with the merchant bank is that you will NOT charge a
surcharge.

While the intent of the state or local law may be commercial only, as
a practical matter it is almost impossible to draw the line between
commercial and non-commercial transaction. For example an eBay power
seller is in general someone who sells on eBay for a living. Does that
make him a private party, or a merchant? There is no exemption for
private transactions.

Because "TONS" of people are using credit card surcharges on Ebay doesn't mean that Ebay won't end your auction if they catch it or someone complains. Ebay does have a problem with it and WILL end your auction if they catch you charging a surcharge. If someone bids and wins your auction and then complains to Ebay because you are trying to stick them with a surcharge, Ebay will void the completed auction because it is against their rules. Do you not see this? Don't believe me - just ask Ebay...

A few years ago I worked a regular 3 day full time job and was looking for some part time work. I went to the local Radio Shack that I frequently visit and put in my application. Even though they knew me by name and knew I enjoyed electronics repair as a hobby, I didn't get the job for one basic reason... no sales experience. I knew the product line 10 times better than their sales staff, but pure sales experience was what they sought. I guess a former fast food clerk would have a better chance of getting a job at Radio Shack than someone who actually knows their business...

# 665. Re: erase memory of Icom R2?

Newsgroup: rec.radio.scanner
Date: 2001-10-17 03:01:20 UTC
From: Neville Y <scubadiver@bigfoot.com>
Message-ID: <Rs6z7.2387$hJ1.163428@news02.tsnz.net>
Source record: 58466

Quote from Manual

Partial reset
If you want to initialize the operating conditions (VFO frequency,
VFO settings, set mode contents) without clearing the
memory contents, a partial resetting function is available for
the receiver.
While pushing [FUNC] and [V/M], turn power ON to partially
reset the receiver.

All reset
Reset the CPU before operating the receiver for the first time,
or when the internal CPU malfunctions.
While pushing [FUNC], [BAND] and [V/M], turn power ON
to reset the CPU.
"CLEAR" appears when resetting the CPU.
CAUTION:Resetting the CPU returns all programmed
contents to their default settings.

Memory clear
Unwanted memory channels can be cleared (erased). Before
clearing a memory channel make sure it is no longer needed
as cleared memories cannot be recalled.
Select memory mode with [V/M].
Set the memory channel to be cleared with [DIAL].
Rotate [DIAL] while pushing [FUNC] to select a memory bank or
programmed scan edge channel.
Select VFO mode with [V/M] and push [FUNC] + [(V/M)MW]
momentarily to indicate the selected memory channel.
Do not hold [FUNC] + [(V/M)MW] for more than 0.5 sec., otherwise
the selected memory channel will be overwritten.
Push [FUNC] + [(MODE)LOCK] for 2 sec. to clear the selected
memory channel.
3 beeps sound, then the frequency is cleared.

Hi all,

I have a radio shack micro size 2 meter HT the model HTX-200. there is also a standard speaker mic, and wall charger for AA batteries . It also has 4 nimh batteries included as well.
This rig is smaller than a pack of non filter camels in size, and works on regular AA batteries or rechargables. a plus for emergencies.

I would like to trade the package for a small sized handheld scanner like an R-2 or the like. what do you have to trade?
Or the price for all is $100

Thanks

## 668. Discussion: Multiple Scanners

Newsgroup: rec.radio.scanner
Date: 2001-10-17 03:36:53 UTC

Source record: 58469

How many people out there have more than one scanner?

I have 4, listed in order of purchase:

PRO-2044 (1996)
PRO-2050 (2000)
PRO-91 (2001)
PRO-2066 (2001)

The 2044 has the local Fire Dept. tone-out channels and keep it on 24/7 at high volume.
-That's fun to wake up to :)
The 2050 is on local trunked PD and Fire.
The 2066 i have mounted in a taurus and use it when going on a call.
And the 91 i take with me whenever i go in a car thats not the taurus.

I'm not a volunteer, but i do go to major wrecks and house fires and sell video clips to the news if it's good. (The news station is about 25 minutes away from where i live so i get there faster.)

Indeed, and charging an extra fee for using PayPal is against the
following people's rules:
* Visa
* MasterCard
* eBay
* PayPal
* State of California
* Other various states

Just because a lot of people do it doesn't make it right nor does it
make it legal.

When you say it sounds fine in the morning...does it sound fine in the morning even in the office parking lot (ie: if you get to work and just sit there)? Does it act up all the way home or just when you first leave? I'm just thinking that maybe your office is in an RF dense area and you are getting intermod problems or the like, which you are not seeing at home. Only other thing I can think of is some kind of heat sensitive problem in the scanner that is causing problems after the car has been (presumably) sitting in the sun all day.

One possible to way to differeniate between intermod and a heat problem is to completely disconnect the antenna and see what happens.

This thread is becoming hard to stomach. Really...

Look - ebay is NOT the police or the FBI or any arm of the law, for that matter. They are simply just another business. That's the first thing you have to understand. You are under some mysterious conception that because a sale takes place on ebay, you are subject to some set of laws other than those of the state in which you do business. This is just not so.

It is still a private exchange.

If you violate ebay's rules, yes, you can be removed. Yes, your auction can be canceled. That's your consequence. You do your thing, and if it's not according to the rules of the house, you take your chances. Done. Not a big deal. You are violating much more serious laws and entering much more dire territory and taking a much greater chance of consequences when you take your car up to 45 in a 30 MPH zone. But you already know that.

ALL business conducted between two individuals, whether from an ad in the local newspaper or from an auction on ebay is a contract between those two individuals, period. It is a private exchange. Read further and you will find disclaimers stating that the service provider is NOT responsible for any transactions that occur between two individuals. They are just providing a SERVICE.

I am NOT talking about FRAUD here. I'm talking about any regular transaction. If you state that you will charge me a thousand dollar fee for shipping your scanner west of the Mississippi even though it will only cost five dollars more, and I agree to that, I owe you a thousand bucks. Doesn't matter whether ebay (or anyone else, for that matter) likes it or not.

I don't want to sound harsh, but I have the feeling that you are either very young, or extremely naive, and just haven't been around much, or haven't transacted very much business in a variety of venues.

I don't understand all the discussion about this. You keep saying, "your auction can be canceled! You can get thrown off, blah, blah, blah!," but everyone already knows this. Who cares?? What is the big issue here????

If you want to buy something from someone but don't care for the way he does business, you can simply choose not to do business with this person. You can't go crying to everyone that "he wants to overcharge me, wah, wah, wah..." This is America, after all. Everyone is an individual. You are fortunate to be able to exercise your intelligent decisions. You choose to buy, or you choose not to buy.

So let's please stop it already.

Now, the truth of the matter is, with services like PayPal, etc., while they may not "prefer" to see you charging more to transact your business in the way you personally might deem appropriate, they would still rather let you continue to use their service than LOSE your business altogether. They still earn a fee from your transaction, and that is the ONLY reason they are in business. They have no desire to close their doors to good folks who do even a small amount of regular, normal, friendly business.

Whew - - I had to get that off my chest. Thanks for reading this.

And to those who feel they must flame others who disagree with their opinions, be advised that I am not in a state of war, and I will not be brought into one.

Why? If you're in any metropolitan area, scanners are great tools.
You can be chatting away on one repeater, and keep track of activity
on several others. I tend to use my HT for that, since it can monitor
multiple frequencies easily, but I still keep a PRO-76 around for
listening, and so the YL can monitor from home when I'm out. (Her HT's
kinda limited, and I always take mine with me)

Where do you live? Are you in or near a major city? We can check for
your local area repeaters, and that way you'll know what to look for
in a radio. If your area has a lot of 440 activity, then a dual-band
radio would be well worth your money. If everything's on 2m, then you
may want to keep it cheaper initially.

Post your approximate location, and I'll get you some repeater
frequencies that you can monitor with your scanner to find out where
the activity is at.

As far as that goes...checks are not necessarily all that free.
Nowadays, many banks are charging deposit + item fees...not to mention
the gas or postage. And let's not get started on the charge if someone
gives you a rubber check.

I don't have any personal experience with PayPal, but it seems to have
good reviews.

Miami uses it a lot. Which reminds me...I know it's old news, but stay
tuned to the website below for "The Best Of Elian's Big Day". I have
some hilarious and interesting soundclips ("Me mother...Elian" is my
favorite).

"Fourteen" as a replacement for "ten-four" seems to be getting popular
as well. Detroit, and a couple other departments in my area, use it I
suspect that it's a rejection of CB - an effort to add
professionalism. Or perhaps it helps clarity.

"Fourteen" is also aurally, as well as actually, a single
word...smoother off the tongue than the staccato "ten-four".

All excellent points I failed to consider.

> I don't have any personal experience with PayPal, but it seems to have
> good reviews.

Indeed, I use them as a pseudo-bank -- I have my ATM/MasterCard debit
card from them and love the web-based interface (much better than my
local bank). I just use my local bank as a place to deposit checks, then
ACH 'em to PayPal.

Anyway, this seems to be quite off topic for alt.radio.scanner, which is
the group I read, so I'll call this thread quits.

Soundbites from Miami Police Traffic on the day that Elian Gonzales
was removed from his relative's home, including:

Me Mother...Elian
- She went on strike

Car With The Food
- Somebody's getting hungry

Cooking Pretty Well
- Perhaps that's where the car with the food is

Bombing Mission
- It's not a big deal

Bottles & Rocks
- Will be thrown

STBA's In Reach
- You better watch yourself

http://www.michnews.net/scanner/elian.asp

## 679. Pro-39 Kevpad help

Newsgroup: rec.radio.scanner
Date: 2001-10-17 09:11:15 UTC
From: Joel Dorfan <bdorfan@xxxicon.co.za>
Message-ID: <3bcd4b62$0$230@helios.is.co.za>
Source record: 58480

A few buttons on my Pro-39 are not responding anymore (ie. scan, 9 etc.).
I opened the unit and cleaned the keypad. It worked intermittently again for
a while then stopped again.

I figure that the conductive coating on the reverse side of the keypad has
worn on these individual buttons.

I am the other side of the world (South Africa) and it will not be easy to
get hold of another keypad.

Any suggestions out there?

TIA

Joel

# 680. Re: PAYPAL 3% Extra? Legal?

I use PayPal with my eBay account. So far it has worked out great. Jusst one thing to consider. PayPal is NOT FDIC insurred and if you use it to store a whole bunch of money, well... I just use it for e-commerce and then I move the mopney to my insurred personal account.
Another great service I use is Qcheck that allowes you to send and receive checks on line.

## 682. Speech/Frequency Inversion Descrambling

Newsgroup: rec.radio.scanner
Date: 2001-10-17 12:20:51 UTC
From: ctpds49@aol.com
Message-ID: <20011017082051.01816.00000699@mb-fo.aol.com>
Source record: 58483

Speech Inversion is accomplished by mixing the speech spectrum
(typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some
audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz
constituting the speech inversion.

Most of the following are up and running:
mobile/ base
2 - bc780 (1 in car)
2 - bc760 w/ pl boards
2 - pro2042 w/ Opto boards
1 - aor 3000a
1 - bc895
1 - bc890
1 - relm ms200
1 - pro 2026
1 - pro2066
handhelds
1 - bc80
2 - bc245
1 - bc3000
1 - pro92
misc
2 - single channel receivers (Instalert)
1 - Vertex UHF 99 channel
1 - Kenwood UHF 32 channel
1 - Motorola 800 MHZ Spectra (in car)
1 - Motorola UHF Maxtrac 32 ch (in car)
1 - Motorola VHF Maxtrac 32 ch
1 - Optotrakker
1 - R/S freq counter
1 - 386sx25 running Trunker 3.8
1 - 386sx25 running ACARS
1 - 486sx25 running Probe for pro-2042
1 - p200 running Winscan for bc895/ internet for live scanners
1 - 1.3 p4 for internet access/live scanners
2 - stridesberg 4 port active splitter
1 - stridesberg 8 port active splitter
1 - stridesberg 4 port active 800 mhz splitter/filter
1 - stridesberg 800mhz preamp/filter

working on taping system, probably will be computer based with switchable
inputs.

it all depends on the type of system they use. some older systems that are dedicated to that agency can be monitored (illegally). most units where I am in CT are cellular based (CDPD) and are encrypted. The state police use their own system but it is encrypted and a newer version of the Motorola RD-LAP which has no decoder software that I have seen.

Then how can a State control/prohibit which frequencies you
listen to in your car?

Heh...well, I don't have a whole lot of money -- if I did, I'd be
keeping it some vault with the rest of my gold bullion. :)

As stated above. it may be CDPD. if you live in canada. Then most officers that have a terminal in their car will be CDPD. but. it is easy to tell though. I cannot vouch for other places. but here. I do know they look Like laptops, color screens and work sorta like windows. they use a ball to control the mouse etc. other screens that look like monochrome ascii on the screen. usually aren't CDPD.

Yes, and my local police dept.has changed to a digital system, so that we can no longer listen to trnsmissions (at least I don't know how to and my bearcat scanner no longer gets them) I regret that, because I used to enjoy learning about what's happening in my town and, as human rights commission member, informally monitoring that aspect of responses to the public.

>A city cannot control which radio frequencies you listen to in your
>car or in your house.

Nobody said anything about control. However, there have always been
laws to the effect that you may not use what you hear on the air to
break the law. Some cities take a slightly proactive approach to this
by trying to ban scanners in vehicles. They figure, probably
incorrectly, that anyone with a scanner in their car is trying to
figure out what the police are up to so that they can go speeding.
It's much the same sort of logic as banning the use of a radar
detector in your car. The FCC doesn't see anything wrong with this
approach, as long as it doesn't impede legitimate needs.

Legitimate needs include things such as Ham Radio Operations, Radio
Technicians hunting IMD sources, traffic reporters, and the like.

That's why the ARRL requested the FCC to make this MO&O exempting ham
radio operators from anti-scanner laws. They agreed.

If your city has an anti-scanning law without such an exemption, you
should show them FCC/DA # 93-410 or 58FR48459 in the Federal Register.

Such laws likely are unconstitutional and/or federally pre-empted. Do
you have a cite to any of them?

Depends.... if the frequency is that close, you may get it, albeit fuzzy. Especially if it is mode that is natively wide in signal like FM. Other factors like proximity and power transmitted may affect your ability to listen to a frequency .005 Mhz off.

I'm in Newark, Ohio and I have a bunch of the repeaters here. I guess I neglected to say that I have 4 scanners. So if I get rid of 1 or 2 it wont really kill me. I have been into scanning for about 6 years now. and Ham just peaked my interest for a long time til I decided to do something about it.Thanks for the advice!

## 724. BOEING Company Freqs - Mesa, Arizona

Source record: 58526

I have an IC-R3, and I put a 4 foot CB antenna on there, and it does improve the SW reception quite good. Though it's still way better to have an outdoor antenna. It also imporoves the VHF low band too.

In article <o23pst03m4tjbreh4p93tqp4voo748umgf@4ax.com>,
chuck_traveling@my-deja.com says...
>
>
>Has anyone tried attaching a SW antenna to an IC R2?
>Would this be a waste of time? Should I buy a proper SW
>receiver instead?
>
>

Source record: 58527

I have an ICOM R2, and it is a nice radio, but best for walk-around portable scanning. I use a Drake R8B for SW listening. Not everyone can spring for a radio like the R8B, but if you want to do serious SW, don't look to the R2. If money is a problem, there's the Yaesu FRG-100, which is relatively inexpensive but a great radio, and lots of others as well. Try Ebay and see if you can latch onto to Drake SW2 - another nice radio.

Good luck!

Yes Joe it is computer programable! Check the box it came in! It just came out in the stores under part number 200-0048
Here is the letter from Rat Shack.
Thank you for your patience. We are sending this e-mail because we have an e-mail on record from your address that was sent regarding a data cable for either the PRO-76, PRO-79 or PRO-89 Scanner. This cable is now available under the catalog number 200-0048. It is a store-stocked item and can be purchased either through your local store or ordered through our Catalog Order Center at 800-843-7422, Option 2, (Catalog, Parts and Accessory Ordering). It is not currently available for on-line order but may be added to our on-line catalog at a later date. We appreciate your patience regarding this product. If you have any further questions, please respond to this original e-mail with the REPLY option so that the previous mail is included.

Thank you,
Terri

> OK, I'll bite: How?

Beats me ... the Federal FCC Ruling that prohibits States for
passing laws interfering with the "right" of US citizens
to receive any radio spectrum transmission from any source
has been continually pre-empted by zealous/fascist States like
North Carolina and Virginia ... any surprise that its the "commonweal"
states that jack-boot this prohibition.

Perhaps its one of those cynical political ploys where
the fascists deliberately and knowingly pass/enforce
an illegal/unconstitutional law, knowing that no one
will likely spend the big $$ necessary to challenge it,
and when someone with the resources does step up to challenge
it, they drop the charges against that person, muting any further
action.

Bastards!

I have a handheld radio shack scanner. It's about 5 years old total (that is to say the model I think) and have had it around 3 years. It is a Pro-28 30 channel 29 to 512 MHz. Damn thing is I've had it in storage for two years and cant seem to find my instruction manual and dont know how to erase/enter any frequencies. It is an "ok" scanner i understand for rural stuff and am going to get a better one when opportunity presents itself. it seems to have all the normal with no frills. not even a backlight. bastard cost 139 bucks back then and now i wished i'd bought a uniden anyway for 90 bucks. but .....anyway lol ... can anyone help me please? I tried the enter button alone and that didnt work. must be a combination of buttons thats pressed for entering erasing frequencies. Im about to move to a diff location in the US hence my question. will TTT this to make sure it doesn't get pushed away. thanks so much.

:
: Exactly! Thanks you.
:
: Phil C

I still don't get it... E-bay can't dictate your agreed price
if no mention is made of the Paypal charge.

If you want a 10% profit margin and paypal takes 3%, then
start minimum bid at 13%. Ok so that means the check/MO
people are going to give you a better bottom line. So the
3% paypal "charge" becomes transparent to E-bay. The fact
remains - the minimum bid you accept is up to you.

I'll tell you what though, it's pretty flaky to come to an
agreement on a price, then try to mark-up a hidden fee.
What are we, the telephone company?

And about the rules... Some people way back either stole
this country from the Indians or the British or the Mexicans
or the Spanish depending on your point of view. In any case,
you have blood on your hands even if you don't know who to
give it "back" to. Don't tell me about the rules... I made them
up DAMMIT!

Jim

Er, no, again. The FCC preemption does NOT cover 'scanners'. It covers
only ham radio trancievers which happen to also cover police frequencies on
recieve. You can have a ham radio handie-talkie or mobile that has
'extended receive'. You cannot use this exemption to cover a standard
scanner.

>it.Thanks for the advice!

Well, if you hear dead nothing ever on the 440 machines and don't
really intend to try your hand at working satellites anytime soon,
then you may want to go with something in a 2m-only rig. The HTX-202
seems to be the standard for this, even though Rat Shack no longer
carries it. Expect prices to start around $60 for the radio itself
with one battery pack, and go up from there depending on included
accessories.

If you want 440 capability, then go for a dual or triband rig. For a
mobile rig, everybody seems to like the Kenwood TM-G707. I have one,
and it's a darn good rig for general use, without the expensive bells
and whistles, but with great performance. I don't have much in the
way of opinions on dual band HT's since I picked up a great deal on a
Kenwood TH-D7A and haven't really paid much attention to the others.
The D7A tends to cost more than most beginners want to pay, since it
has the built in TNC and some other functionality a lot of us may
never use. (There's about five or six features I still haven't
used...yet)

I don't see any 6m repeaters very close to Newark, but that doesn't
mean there won't be any FM simplex activity there. If you see a good
deal on a tribander that includes 6m, it could be worthwhile.

For 2m, looks like your closest will be the 145.37 and 146.88MHz, with
possibly 146.835MHz as well. 223.94MHz may show a little activity,
but the only way I know of to get a very good deal on a 220 rig is to
get it as a 2m+220+440 triband. In the 440 band, you should be able
to hear something on 442.05, 444.50, 444.65, and 443.925. Of course,
you know more about your area than I do, and you probably already have
an idea of the terrain effects on these bands near you, so try to get
a current copy of the ARRL repeater directory, and see what other
cities you can pick up, then decide who you want to talk back to :)

## 751. ? about EDACS programming in a 245XLT

Newsgroup: rec.radio.scanner
Date: 2001-10-18 04:54:28 UTC
From: BJ <Unknown@hotmail.com>
Message-ID: <8gtz7.62406$si5.7300542@typhoon.kc.rr.com>
Source record: 58402

My EDACS talk groups are already sub-divided somewhat logically into different scan list groups within the 245. As most know, you can enter only the agency number in a talk group location (ex.- 10.XXX) in hopes of finding new talk groups. (While listening to the agency ID, active talk groups appear.)

In the course of normal scanning, it seems like this 'global agency talk group' hogs most of the 'hits'.

My questions for the pros are... Should this agency talk group be part of the scan list, or should it be isolated in a sublist group where most of the time, it is locked out? My understanding is, that if I directly lock out this global talk group, it will also lock out the IDs that belong to it. Is this true?

Thanks

The way I sidestep this is I have the free paypal account. This limits
me to receiving no more than $100 in credit card payments per month, so
I mention I take paypal as long as the payment isn't funded with a
credit card.

For smaller dollar amounts, I sometimes make exceptions and allow a
paypal credit card payment as long as it won't put me over the $100.

This probably wouldn't be practical if I was a dealer or active seller.

Personally, I like paypal no matter if I'm buying or selling.

# 754. Beaumont, TX 800 MHz Trunked Public Safety Freqs.(Police Dept.)

Newsgroup: rec.radio.scanner
Date: 2001-10-18 06:00:51 UTC
From: db77619@aol.com
Message-ID: <20011018020051.01667.00000563@mb-ml.aol.com>
Source record: 58405

Does anyone have the 800MHZ TPS frequencies for the Beaumont, TX Police Dept?
About two or three months ago one of the papers said they planned to purchase a
800MHZ TPS system and would switch over soon. Apparently they have already
switched over because I no longer hear them on their old 460MHZ system.
Thanks in advance.
Happy Scanning.

## 755. iDEN Telephones

I found the easiest solution at least for people in Michigan. The law states you must either have an amateur radio license or a permit from a law enforcement agency. Fortunately I have both. The Michigan State Police issues a permit which you can fill out a simple 1 page application in .PDF format. I thought it was incredibly easy to get, and it only took about 2 weeks to get it back in the mail.

The reason I used on the form for needing the permit was, that I feared that not ALL law enforcement officials may be familiar or have an understanding of the law as it pertains to the carrying of a reciever capable of recieving law enforcement frequencies.

Hello Everyone,

I just acquired a RS HTX-200. I'm looking for a SMC<->BNC
converter so I can plug it into my fixed antenna. Any ideas where I can
get one? Part number perhaps?

The only problem would come from a the buyer if he gets upset when you try to charge him a surcharge and he is smart enough to report it to Ebay or Paypal. If the buyer agrees to the charge in your private emails then thats a different story.

> If you want a 10% profit margin and paypal takes 3%, then

> people are going to give you a better bottom line. So the
> 3% paypal "charge" becomes transparent to E-bay. The fact
> remains - the minimum bid you accept is up to you.

The only problem with a higher minimum bid is that Ebay charges you a higher listing fee. The listing fee is based on the initial bid price.

> I'll tell you what though, it's pretty flaky to come to an
> agreement on a price, then try to mark-up a hidden fee.
> What are we, the telephone company?

If I won an item on Ebay and the seller (who advertised that he accepts Paypal) tried to stick me with a 3% surcharge after the auction I would be upset for sure. Of couse the seller could compensate by adjusting the shipping charge upwards. If you want to sell a lot on Ebay and not have a bunch of negative feedback then I would advoid dishonest tactics like this. Eventually someone will get po'd at you.

> And about the rules... Some people way back either stole

> up DAMMIT!

Total hogwash! No one alive today "stole" this country from the Indians, British, Mexicans, or the Spanish. If your father was a criminal does it mean that you should be labled a criminal too? I don't think so! Those who you say have blood on their hands are long dead and buried. Go spew that offensive garbage somewhere else!

I've seen such things at, you should pardon the profanity, Radio
Shack. One could also be ordered from Newark, or Allied, AES, HRO or
the like, but the cost of shipping would make it one expensive
connector.

Try any electronic supply store in your area. They'd have one. Or
if you have a ham radio shop in your area they'd certainly have one.

Source record: 58417

It seems in the manual (p51) that you will not get any traffic on any t/g with the locked out Agency or Agency/Fleet.

It should be easy enough to figure out ... enter in a busy talkgroup in full format. Then enter in the agency only also. when the talkgroup with the agency only is active with traffic on a t/g that you have elsewhere, lock it out. if you pick up the traffic on the full AFS id then it works, if you get no traffic, then it doesn't.

## 768. Pro-93 AdaptaPlug problem.....

Newsgroup: rec.radio.scanner
Date: 2001-10-18 18:07:38 UTC
From: emoney250@aol.com
Message-ID: <20011018140738.12807.00000079@mb-mp.aol.com>
Source record: 58419

To let all you new Pro-93 owner know, the manual calls for a type "C"
adaptaPlug for AC/DC power. After purchasing said plug and plugging it in, I
would get interrupted power when handling the scanner. Really sucked when
listening on a good transmission (as the scanner resets and takes a couple of
seconds to start scanning again). This happened for both AC/DC power supplies.
I returned to the store and tried another type "C", same problem. I even
tried the store display model, same problem. We tried a type "B" plug and the
scanner went uninterrupted no matter how much I moved it. So, try a "B" plug
before buying a "C" (eventhough the manual recommends a "C").

Newsgroup: rec.radio.scanner
Date: 2001-10-18 18:34:19 UTC
From: BJ <Unknown@hotmail.com>
Message-ID: <IoFz7.260$J61.45212@newsfeed.slurp.net>
Source record: 58422

It's not an "All Call" talk group. For example, a relatively small city might have an 'agency' talkgroup prefix of 00-xxx and several talk groups with ID's such as 00-100, 00-102, 00-205, etc. I can program in the entire agency (as if it were a specific ID talk group by pressing 00.(enter). Display shows 00----. When ANY talk group belonging to the agency becomes active, the display changes to the specific ID (while active only) then reverts back to 00----, until another is activated. I had originally programmed an ID location like this to identify new talk groups that I do not have pre-programmed. The problem that I ran into, however, was if I lock it out, the entire agency is locked out. If I put it in a ID group by itself, I can lock out the group, and it doesn't affect the other pre-programmed ID's. It's not quite what I want because I'm giving up 9 blank spaces.

Just wanted to know if someone else has experienced this and had a better solution.

> 
> What agency & where are you listening too?

>'extended receive'. You cannot use this exemption to cover a standard
>scanner.

Point taken. So, if space exists for me to insert a 100 milliwatt CW
transmitter inside a scanner, it's a legal transceiver. Otherwise,
it's an evil scanner and it may be confiscated by local or state
police.

This is silly. In any case, most anti mobile scanner legislation I've
seen relates to non-ham activities. If you're a ham, you are usually
assumed, in every jurisdiction's laws I've seen so far, to have reason
for using a scanner in your car.

But for those who would like to have sport with these silly
legislators who think they've found the solution to everything:

A radio without squelch sensitive frequency control is NOT a scanner
(read the FCC's definitions in 47CFR1 and 47CFR15). It's a receiver.
I would be strongly tempted to build a one channel crystal controlled
receiver tuned to the local police frequencies and have it blaring in
my car while passing a cop. But since I already have a ham radio
license, I'm exempt from most of this stupidity.

The FCC also pointed out in this MO&O that police who wish to keep
transmissions out of the public eye should use some form of
encryption.

I leave this wonderful exercise to those with no radio license and
plenty of time on their hands.

They rip you off for these connectors. I have relatively new ICOM HT's, which all have SMA. My ICOM dealer is a good guy and throws them to me gratis for giving him business, otherwise, he charges $4.99/ea. Try Rat Shack, but they likely won't know what you're talking about. I'm in NJ, and I thing there are about two decent radio shops in the entire state.

Don't know this scanner specifically, but the typical RS procedure is:

- Put scanner in manual mode.
- Advance to channel to be programmed.
- Press Program
- Enter frequency (wth decimal)
- Press Enter
- Press Manual (or Program) to advance to next channel and start
process over.

Hi,
You might want to take back your PRO-94 and exchange it for another. I have 2 PRO-94's and they are a good radio.

I live about 2 miles from the Daytona 500 Speedway and during the Pepsi 400 this July I was able to pick up most of the drivers while sitting on my back porch.

I know Radio Shack carries what you need. I purchased two a couple years ago. Their on-line catalog shows only 910-0630 @ 7.49. That's a male sma to male bnc. I bought my male sma to female bnc for 5.00 I recall. Don't have hard copy catalog handy.

That's interesting. One of the reasons mobile scanners have been
banned in some states is to cut down on tow trucks showing up,
unrequested, at accidents.

Some states with restrictions on mobile scanners exempt reporters on
assignment, and some have more liberal exemptions for hams.

Source record: 58440

quoting:
>I just ordered a IC-R3. Are you happy with yours? How did you add a
>4 ft antenna? Any help qould be appreciated.

yes, I'm very happy with it. The antenna was made for a handheld CB with a regular BNC connecter on it. All I had to do is attach the BNC to the top of the IC-R3. In a way, It's kinda funny that the antenna is 4 foot long, and the radio is only 5" tall. But otherwise, it works just fine, just switch back to the short antenna when tuneing anything higher than 50 mhz, because it will actually reduce reception up above 50mhz.

technically, a scanner will pick up the signel, but a scanner will not decode the signel so you won't be able to hear the cell phone. You need an external decoder....such as.....your computer. Sooner or later there will be freeware that can decode digital cell phones.

Message-ID: <3BD000FE.5869FF6@mitre.org>
Source record: 58348

What frequency range in the 800 Mhz band are you receiving just on sided
conversations?
1) Try 45 Mhz's higher. You may be listening the repeater input freq.

2) The communications your hearing may be simplex, direct short range.

3) What your hearing may be "intermode" or "harmonics" of traffic on
another frequency altogether. Try looking at a frequency that is plus
or minus two times one of MTV-7100's I. F. frequency. This will be a
"image frequency"

You sick fuck!
Do you really think that God (yes, we do both believe in the same God!) would find you honorable to kill 6000 innocents? Women? Children? Even the men? They were not soldiers! They were murdered by YOUR people. They were murdered by your belief, allegedly, when your faith preaches against murder. You are supposed to be "the peaceful faith" How can you justify murder? I'd like to meet you, no I'd love for the family members of those you and your "faith" murdered on Sept. 11. Will you be surprised to find yourself in Hell for your "beliefs"?
Osama is no better than Hitler. But maybe you find that to be a compliment, seing as you see Jews to be rats. No people as a whole are equal to rats, rather individuals are, such as you. Like rats, you come out of your hole to attack, then retreat when noticed. Hiding, breeding, feeding.
You will be found. And then may God have mercy on your soul!
Signed,
Bill Madary

I am looking for a decent hand-held scanner to use in Long Island, NY(Nassau County and five borough area). How much emergency communications are being held over the trunked systems here and how well the RadioShack Pro-92 would work as opposed to UNIDEN BC245XLT in my area. I understand that NY mostly uses Ericsson/GE EDACS type trunked system...

Thanks

Rosty

I don't know what you mean by "binding on the states", but federal law
supersedes state laws when they conflict. Radio spectrum regulation
is within Congress's authority to regulate interstate commerce, and it
has delegated authority to the FCC to enforce the Communications Act
of 1934. Also, I suspect that Congress has pre-empted state
regulations (whether in conflict with federal law or not) with respect
to the radio spectrum (although I haven't looked into the case law to
confirm this).

You have to realize that most police officers do not know all the laws and such from the NYS V&T law (You can get a copy from DMV for a buck) a perfect example is everyone knows about Right on Red but in NY State did you know that you can make a Left on Red? well you can. its in the law book. When I went to the Suffolk Police for a letter/Permit they said the same thing. I had to show them the V&T law book then the helped me and gave me the letter. A little research goes a long way.

## 807. PRO-92A programming questions

Newsgroup: rec.radio.scanner
Date: 2001-10-19 15:24:32 UTC
From: toomanyradios@aol.com
Message-ID: <20011019112432.22806.00000150@nso-mn.aol.com>
Source record: 58358

Received the following e-mail from a friend yesterday. I've only been a casual user of the PRO-92, not an expert by any means. Perhaps some of y'all can be of more help than I can be here:

I've read and re-read the Radio Shack manual for the PRO-92, but when I try to program my local Police, EMS, and Fire frequencies, I'm not getting the results the Manual calls for.

From the Radio Shack Manual ....

"Trunking Operation

Follow these steps to program trunked frequencies.

1. Press PGM and select the bank, then press TRUNK

to enter the ID program mode.

2. Repeatedly press MODE to select LT for EF

Johnson, MO for Motorola, or ED for the EDACS

(GE/Ericsson) system to scan. This sets the talk

group ID decoding method to be used for the bank.

3. Press PGM to enter the program mode.

4. Store the trunking frequencies into subsequent

channels in the same bank (see "Storing Known

Frequencies into Channels" on Page 30).

5. Repeatedly press MODE to select the trunking mode

– LT for EF Johnson, MO for Motorola, or ED for

the EDACS (GE/Ericsson) system.

6. Press SCAN. If the scanner’s receive mode matches

the ID mode, T appears and the scanner scans the

frequencies."

My questions/problems are:

a. In #1 above, the Manual says to "press PGM and select the bank to program." I can't find how to select the bank, especially after pressing PGM.

b. In #6, the Manual says "T appears and the scanner scans the frequiencies."
I don't get the T but the scanner scans the frequencies that I have programmed.
I don't know if it is tracking the trunked conversations or not.

c. I know the frequencies and ID codes that I want to follow. How can I tell
if my program is tracking these calls?

Your title says SMA, but the body of the text says SMC. There is such a thing as an SMC connector but I think you mean SMA. SMA-to-BNC adapters are quite common. There are several types available. You have to specify the gender of each end (e.g., SMA(male) to BNC(female).

Try this site: http://www.wa3hrl.com/smabnc/

To all:

I would like to invite you to join my BRAND NEW mailing list for scanner enthusiasts!! It is called "CenCalScan" and is at Smart Groups. My list is for those of you that live in or travel through the San Joaquin Valley in California. This valley extends from Sacramento-Los Angeles.

I have been interested in radio communications ever since I was seven years old. My late father taught me how to use a CB radio at that age. I am now 41 years old. I am currently using a Bearcat 235XLT. I live in Fresno, California. This is in the central portion of the state. It is 160 miles south of San Francisco and 200 miles north of Los Angeles.

There are two ways to join my club:

[1] Go to the list's homepage at
http://www.geocities.com/scannut93711/
Once there, scroll down until you see a box in which you would enter your email address.

[2] Send a blank email to:
CenCalScan-subscribe@smartgroups.com
Leave the subject line and body empty.

I hope to see you on my list!!

the orign of "k" are from the "old" days. on my division very few officers and dispatchers use"k". "read direct" is also used quite frequently. the dispatchers have a tough job. i would not do it. they have to handle sometimes 2 or 3 pct's at once and multiple "heavy" jobs. the dispatch computer system "SPRINT" is ancient. as far as the radio system, it works fine for us. many units have no antenna's on there radio's because guys take em off and put the buff mic's on and loose the antenna. when dispatchers have their headset's on, sometimes they are hard to hear, but if you tell them it usually corrects the problem.

what gives is that the hand-held cell phone and the cell sites use a different group of frequencies, in constanly changing pairs as the phone moves from cell to cell...

your scanner is catching either a local cell phone, or the signal from the cell site.... hard to catch both...

You can catch bits and pieces of trunked communications on a non-trunk
tracking scanner, but you'll definitely want to update your equipment if
you really want to follow conversations.

> can somebody please explain the
> trunked system and how I can listen to the police and such. I thank
> you in advance.

in a nutshell, think of a trunked system as bank of freqs that lots and
lots of folks share via specified timeslicing. One freq is dedicated as a
control, which sends out info as to who is on what frequency at a given
time... the control info directs all the traffic for a specific group in
such a way that it appears they have a freq all their own, when in fact
they could be transmitting on any or all of the systems freqs over time.
A trunk tracking scanner can read the control info and direct the
scanning to follow specific groups in the same fashion as the trunk
system transmitters do.

What scanner is best for you depends on your situation... what sort of
trunked system do you want to track? Do you need to track more than one
trunked system at a time? Do you want to be able to scan both trunked
systems and non-trunked systems at the same time?

I use a ratshack pro-2050, which I'm pretty happy with given where I
am... but if I were elsewhere, I'd certainly want a more capable scanner.

From: emoney250@aol.com
Message-ID: <20011020002205.17448.00000300@mb-ch.aol.com>
Source record: 58385

I had a Pro-92 and returned it due to bad 800 mhz reception in my area.
However, I now have a Pro-93 and it is awesome (this is besides the point).
YOU MUST FIRST program the fleet map in the bank you intend on using for
turnking. I personally use the fleet map sizes from my old Pro-90/91 manual
(for a type 1 system). I set all blocks to S-11. Then, and only then, proceed
to program the trunked frequencies. (In a Pro-92, you cannot lock out the
control channel. Leave it unlocked as if you wanted the scanner to stop on it.
It will not.)
Any more questions, feel free to e-mail me. I had my Pro-93 up and going
within 15 minutes after I opened the box (largely in part due to my prior
ownership of the Pro-92).

Source record: 58386

SHORTWAVE KEYPAD MODIFICATION - Enables reception below 25 MHz

1. Turn radio on, press SCAN, if necessary, to enter into preset scan mode.
2. Using the number keys lock out all Pages (Banks) except one.
3. turn the squelch fully counter clockwise to open it, set the volume to an acceptable level.
4. While scanning push "Band" and then "1".
5. Wait approximately 1 second, use the "POWER" button to turn power off then on.
6. DO NOT PRESS THE "-" BUTTON. It will cause you to loose your frequency if you get one below 25 MHz!
7. If your timing was perfect you'll see a frequency below 25 MHz displayed. Frequencies as low as 0.2 MHz have been reported. NOTE: You will probably have to try this many times before it works. You may have to try more times before you get a suitably low frequency.
8. Now that you have a frequency below 25 MHz that you want to store, go to step #3 of "PROGRAMMABLE SCANNING (Searching)" to designate this the lower limit for searching. Choose 25 MHz or greater as your upper limit. This will allow you to scan up or down while in HF mode, and allow you to use the "-" key to change scan direction or step through frequencies. If you wish to store a frequency in memory you may tune to that freq. and then start at Step #3 of "PROGRAMMING A FREQUENCY INTO A CHANNEL".

In Michigan I think the law reads to cover any receiver that covers
police frequencies?
Michigan Law MCL750.508 reads:
Sec. 508. (1) Any person who shall equip a vehicle with a
radio receiving set that will receive signals sent on
frequencies assigned by the federal communications commission
of the United States of America for police purposes, or use
the same in this state unless such vehicle is used or owned
by a peace officer, or a bona fide amateur radio operator
holding a technician class, general, advanced, or extra class
amateur license issued by the federal communications
commission, without first securing a permit so to do from the
director of the department of state police upon application
as he or she may prescribe, shall be guilty of a misdemeanor,
punishable by imprisonment in the county jail for not more
than 1 year, or by a fine of not more than $500.00, or by
both fine and imprisonment in the discretion of the court.

## 853. Scanner of Choice for Long Island, NY???

Newsgroup: rec.radio.scanner
Date: 2001-10-20 21:34:34 UTC
From: rostyvyg@hotmail.com
Message-ID: <7291d3a0.0110201334.7609e6ce@posting.google.com>
Source record: 58253

I live in Long Island, NY. My question would be: Is there a lot of trunked communications out here to justify buying a trunk-tracking scanner?

I am trying to decide between pro-92, bc245xlt and bdc780xlt. I know that every unit has it's own strengths and weaknesses. I am just wondering wich one would be better for my area - Lynbrook, NY. I already have Yaesu Vx-5R that I use to monitor non-trunked systems.

Thanks.

Rosty

While logging into Live365 to get my favorite streaming music, they
had an audio blurb about going down from Friday until early Sunday
morning to do some maintenance.

Live 365 (and their stations) will be back then, no doubt.

# 869. Need New 800MHz Trunked Public Sfty Freqs. For Beaumont, TX PD

Newsgroup: rec.radio.scanner
Date: 2001-10-21 04:00:42 UTC
From: db77619@aol.com
Message-ID: <20011021000042.14802.00000305@mb-fn.aol.com>
Source record: 58269

First of all, I think my original post was removed.
Does anyone have the new 800 Mhz trunked public safety frequencies for the Beaumont, TX Police Dept?
I am no longer able to recieve them on their old 450/460 mhz frequencies.
I heard they were moving to 800 Mhz trunked public safety but didn't know how soon.
Thanks in advance.

>How many people out there have more than one scanner?

Someone recently asked me that question, and I prepared a listing. Here it is:
SCANNERS: Four Pro2035s, four Pro2045s, one Pro2036, one Pro2040, one Pro2048, one Pro2049, one Pro2006, one Pro2004, two Pro2002s, one Pro2003, three BC2009s, two Pro2032s, two Pro2022s, two Pro2021s, one Pro2026s, one Pro2023, one Pro2024, one Pro2027, one Pro508, one Pro55, one Pro57. One BC800XLT, one BC760, one BC590XLT, two BC-250s, three BC210XLTs, two BC350As, one BC450A, one BC700A, two BCT-7s, one BC-310A, one BC-155, one BC-175XL, one BC-178XL, one Fox BMP 10/60.
HANDHELDS: One Sony ICF-SC1, one BC2500XLT, four BC200XLTs, two Pro43s, one Pro26, one Pro60, one Pro62, one Pro64, one Pro90, one Pro46, one Pro28, three Pro39s, two Pro34s, and more.
ANTENNAS: About three dozen, including NilJon HD WB Omni, Max Systems Ground Planes (cut to 225MHz), Scantennas, Grove Beams, Discones, etc, many on my 45-foot Rohn tower. Also ample use of in-line amplifiers.
HF GEAR: one DX-394, three DX-390s, one DX-398, one Yaesu FRG-7, one SW-100, MFJ-1020A Active Antenna, indoor/outdoor wires.

While I do not use every one of these, only a very few are shelf-sitters. Many are dedicated to one purpose; for example one for NASA Space Launches, one for Mil Combat Training Comms, one for Federal Law Enforcement, one for USCG/Customs, etc.

sometimes it just happens on the 800 Mhz cell freq, I have known some digital cells that do that too. the incoming transmission, what you the cell user hears is digital, but you the cell user, is unencrypted and can be heard. But this is in canada. and is on the transmitter side. where you would usually hear both. I know. someone will say that won't ever or will not do that. but oh well.

If the local police dept. your referring to is the Nashua NH folks your
NOT going to be able to receive the POLICE and FIRE comms. They are
Motorola Astro Digital. The other city services area audible. They are
using a Motorola Type II trunking system.
Again the police and fire talk groups are only static! At this time
no digital capable hobby radios are available.
It it's Manchester NH or Goffstown NH there trunking systems can be
monitored with the trunk tracking scanners.Or if
you don't mind listening to hopping conversations us a conventioanl
scanner.

# 875. Buffalo, NY Scanner Audio Available

Newsgroup: rec.radio.scanner
Date: 2001-10-21 13:39:14 UTC
From: fkienast@my-deja.com
Message-ID: <3bff12c1.0110210539.731d8818@posting.google.com>
Source record: 58276
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Hello,

I have been messing around with audio servers under Linux and decided to connect my scanner so others can hear it. This will only be up temporarily - the goal is to leave it up a week or so unless my cable provider complains about bandwidth. But I know I have enjoyed listening to JavaRadios (www.javaradio.com) and other scanners online and wanted to give something back.

Depew, NY is about 15 miles SE of Buffalo. I am running a PRO-94 scanner with a simple telescoping antenna located inside. The audio server is Icecast, running under Redhat Linux 7.1. The following are the channels programmed into the scanner:

1 46.280 Lancaster/Cheektowaga FD
2 155.655 Lancaster PD
3 155.610 Cheektowaga PD
4 155.310 Cheektowaga PD Tactical
5 46.240 West Seneca FD
6 424.225 Buffalo FD
7 424.350 Buffalo FD Fireground
8 425.400 Amherst FD

In order to listen to these broadcasts, you must run WinAmp or a similar MP3 player. Select "Open location" and paste the following URL into the player:
http://24.49.207.164:8000/scanner
Note that you cannot just click on this link with your browser - you must paste it into WinAmp. I did not want to open my firewall up to allow access by a Web browser, especially since this is running on a Linux machine. I have limited access to 5 simultaneous users (16kbps) to try to keep the cable bandwidth reasonable.

Feel free to reply via mail or the newsgroup with any comments. I plan to leave the server up for about a week. Depending on the response (and if I don't get any complaints from my cable company), I may later make this permanent or even set up a JavaRadio.

Enjoy!
Frank Kienast

Even when we have Digital Scanners, won't we still not be able to hear anything unless we know somebody who works for the agency and is willing to breach security and give there code?

I'm afraid that the impression I'm getting is that our days are numbered unless we become some sort of communications hackers, or we will soon be able to take all law enforcement and public safety out of our banks. Eventually we won't be able to listen to anybody who doesn't want to be heard outside their circles. Then what? The scanning hobby dies!!??

Change isn't always good for EVERYBODY now is it?

## 881. The best NiCad batteries AND chargers for scanners!!??

From: Viper56-FW <junk@gordonvideo.com>
Message-ID: <sEDA7.10663$wS2.1611212@news02.optonline.net>
Source record: 58282

What types of rechargeable batteries are you guys using?
What NiCad batteries can give me near 8 hours of scan time in a 6 AA battery scanner?
Which charger can maximize these batteries, charging them in less than 10 hours(preferably 8)?
Is 3-4 hours normal battery-life for 1000mAh batteries(new)?

4 hours after I start listening to my scanner it's DEAD!! I have to wait 14 hours to get 4 hours of charge?? Is this normal for 5 year old Radio Shack scanners? How about the new models?

I have been charging the batteries in the scanner with
it turned off and plugged in of course.

## 882. Military HF air to air freqs?

I have for sale a mint Icom IC-R100 Communications Receiver. This radio has never been mobile and I am a non smoker. I have the box, owners manual, sales brochure and all standard included accessories. The R100 covers 0.1-800Mhz and 900-1856Mhz in the AM, FM and wide FM modes.
I am asking $400.00 plus shipping from 48026.

THANKS. I did some more searching and found out that radio shack and
realistic are sort of the same brand if i understand. but i hadn't found
that info yet....thanks!

Go to RatShak and get the service manual.

Study the dimmer switch circuits of both the standard and rev"A" model.
It should be obvious......

Hi Rosty,

I don't know if I'm missing something but I find the trunking scanner to be kind of useless in NYC. I guess it depends on what you like to listen to. All of the emergency stuff is all on vhf/ uhf for the most part. I programmed in the fire, the doitts and other stuff and man is it boring. It's all supervisors or day to day manegerial stuff. The METRO21 system was interesting for a little bit but not even close to NYPD tac freqs or even a lot of the repeaterized stuff.

I programmed in the Nassau Co. trunked system and I hear bus drivers, guys changing light bulbs, guys reporting pot holes here and there etc.. I mean, it's weak! The scanner [pro 92] is cool, but the scanning is weak. The scanner will probably be used more for conventional scanning when I get the time to reprogram it. I posted several times on here looking for recommendations on what to listen to as far as trunked systems and never get a reply about stuff.

I haven't been out to Suffolk Co to listen to their system but at this point, I'll stick to listening to "regular" non trunked stuff. Oh yeah, I am in Queens with a topside antenna and I have the NJ trooper [north and central] programmed in and guess what? It sucks too.. most of the time. It's mostly License checks. Having said that, it's a little better than the NYC/Nassau listening [content].

I put in the NYC transit system, don't ask me why.. and it's beat! Just buses being asked where they are all day. I love the scanner, but again.. the trunking in NY is just lacking, even during the WTC tragedy. It's just my opinion, but I've been into radios [ham and scanning] for 27 years and have an Icom R7000, pro43, pro 2006, and a pro 90 among several other radios here.

Oh yeah, I also put in a system in the lower 400's and also the port auth. The federal system is the most boring of the bunch. Sounds like postal PD checking in all day. The Port Auth is slightly better. I hope this helps... and also I am interested in seeing what other people in NY answer to your post because maybe [I hope] I am missing something! Oh yeah, I put in the Javits system and have yet to hear a thing. Later...

Yes, all of Bucks County is on the trunked system. It's a digital
system using the same frequencies as the old descrete Zone system.
That's the noise you're hearing. Keep the old VHF freqs handy. Every
once in a while they are used for something.

I work for the NYC DOS and K is supposed to denote the end of the
transmission and also for any other unit to transmit. Read direct is used
too.. supposed to be no need for central to relay.. but.. whatever!

Since you posted the same FA teaser less than two hours ago without a FA
header, its only fitting that I repeat it for you. If you repeat it
every two hours for the next week people may get upset and avoid
purchasing from you.
.

I use NiMh cells in my PRO-91. With a 1600 mAh capacity, they can power
the scanner over 10 hours, before they need charged
I sometimes use a plug in adaptor to charge it, or charge them in a pulse
charger.

Typical dispatch of CHP lately:

"any unit in the vicinity of 15 and 215 , rp reports seeing a white toyota with 4 middle eastern looking men traveling south on 15 and accordding to the rp.... it just didn't look right".

" any unit available to check a box on the shoulder east of Archibald on the 10, rp reports seeing a middle eastern looking man GLANCE (yes dispatcher said "glance") at the box as he drove by, rp says this looked suspicious to him"

The unfortunate reality of this is, is that if they don't treat each and every call as valid.....someday that weird sounding dispatch just may be legit, but it really is sorta comical at times to hear the extremes that people report.

Anybody else been hearing what we would of have called ridiculous calls prior to 9/11, but know are becoming the norm?

From: Dave
Message-ID: <3bd44e3f$1@MAIL.mhogaming.com>
Source record: 58316

Hello,

My name is Dave and I'm a scanning addict. As an Auxiliary Police officer in Queens, New York I bought my first scanner this year to help me learn the radio calls.
I was monitoring NYFD citywide and ESU on September 11 and basically scared the crap out of myself.

Since then I have tried to get into listening to more than just PD, FD and EMS. If any one can offer some insights on these problems It would help greatly;

I found that I can't get Military with my Pro-91. I wanted to hear the f-15's and 16's over New York. Even though there aren't that many now I'd like to get set up for it.
Through some lurking here I have found the Radio Shack models that will let me hear them but they are kinda pricey. Any Military channel for around $150?
Anywhere I can get scanners besides radio shack?
I can't hear LGA twr but I can hear the pilots, what gives?

Thanks in advance and I apologize in advance for any stupid questions.

--

Dave A
Pro-91

WOAH!!! 10 hours!!?? Ok now I'm REALLY pissed that I've been getting 4 hours
from my 14 hour charge!!

NiMh huh? Do you use them 5-6 days a week? Are they Radio Shack? I always
thought NiCad were supposed to be better. I thought NiMh had shorter life
and a memory problem.

## 919. your invited to join our group of scanner hobbiests

I would like to invite everyone that may be interested in listening to
scanners online to join our large group below.

Also if your are in the province of ontario, or the city of Ottawa, Ontario
and are interested in listening to scanners in your area and would like info
on the regions, we have a group for both ontario and ottawa below as well.

I am aware that some of the groups this is posted to is off topic but I am
only trying to reach out to the local area for this.

Thank you.

Randy

NiMh have about twice the power capacity for the same sized nicad.
Nicad is the memory problem child, NiMh aren't suppose to suffer from
this. Sitting on a shelf the NiMh will lose its charge over time
quicker than a nicad.

Been visiting a friend in Arkansas these past few days. Brought my PRO-94 along for the ride, and was amazed to find the local sheriff/police on a Motorola Type II trunked system. This is a town of approximately 20,000 population. Hmmm...now I know why the local sales tax surcharge is a whopping 2.25%. Gotta pay for the new toys.

Apparently, the local yokels have been told that one of their talkgroups acts as a "private channel." They have interpreted this literally, thinking nobody can hear them when they "go to private." As you might suspect, they make extensive use of this "special feature" on a regular basis.

I have heard many off-color comments and discussions regarding suspects, co-workers, public officials, blacks, etc, on this particular talkgroup. The most entertaining conversations seem to occur in the late evening and early morning hours.

Someone really needs to tell these hayseeds that their "private" conversations can be monitored by anyone with the appropriate receiver. Like their boss, for example. Or possibly, the mayor. But I'm not gonna tell and spoil the fun! :-)

Anyone else had a similar experience?

## 928. How many Scanner on 1 Antenna?

Just wondering how many scanners you can put on 1 anteanna before noticeing a difference.

I've only done 2 scanners so far but want to go to three, just wondering if anyone else has thoughts on this subject. I'm not using any kind of isolation, just a T connector.

>isolation, just a T connector.

If you can't notice any difference by putting 2 scanneres on
1 antenne using a T-connector you are probably not listening to
weak signals.

Even if you use a splitter so you get the impedance match
right you'll have only half the signal for each scanner. Speaking
in technical terms the signal for each scanner will be attenuated
3 dB plus any insertion loss.

Using a T-connector makes things even worse since you get
impedance mismatch and the scanners might interfere with each
other. If however you are only listening to relatively
strong signals a T-connector might be an easy solution.

If you want to connect several scanners to one antenne without
loss you must use an active splitter that is one with built in
amplification to compensate for the loss. Alternatively you
can put in an amplifier before a passive splitter.

Regards
Per

I love mine.. I just bought to 2061 (the exact model but for the car).. and you can CLONE them, which makes it alot easier to use.. since it's the same as the handheld.

Read the manual.. it took me a couple days to get used to it (also to find the buttons in the dark) :)

The Pro-92 doesnt, but the new 93 does (I think that's the model).. anyway the new model due out around Christmas. The new one also has extended freqs for Ham. It's like the Pro-92 other than that.. if you don't want military freqs or extended ham freqs, save your money and wait until next year when (maybe) digital scanner are available.

I'm not sure when digital scanners will be available, and if they will be analog/digital programmable.

> Anywhere I can get scanners besides radio shack?

Look for a used RS PRO-43. it is a good, solid handheld receiver and it will do Mil-Air. The other stuff out there that will do it does tend to be at the upper end of the price range.

> I can't hear LGA twr but I can hear the pilots, what gives?

Reception at these frequencies is basically "line of sight". any distance from the tower and you can't pick it up. since the airplane is up several thousand feet, it's "line of sight" covers a much larger radius.

> Thanks in advance and I apologize in advance for any stupid questions.

You can't learn if you don't ask. I've seen nothing stupid in your questions. The only ones that tend to get people's goat here are the obvious trolls (especially political ones) and the ones that can be answered by simply reading the manual.

Thanks, I'm only about 5 miles from LGA though and I hear the "Heavies"
calling nine mile finals.. Perhaps an antena extension? Perhaps buildings
are blocking the CT.

Does anyone recomend a source for used Pro-43 or Pro-60?

## 945. no touch tone on cordless (49 mhz) phones?

Newsgroup: rec.radio.scanner
Date: 2001-10-23 03:53:42 UTC
From: Terry Bendell <ve3tkb@sympatico.ca>
Message-ID: <C56B7.5288$NP.844797@news20.bellglobal.com>
Source record: 58346

I am listening to my 49 mhz cordless phone but I can detect no touchtone
being sent back from the base to the handset and on the handset frequency
I just hear a Bleep and a slight noise. The phone is clearly analog and I am
wondering how they are encoding the key strokes on the handset to be
deciphered
by the baseunit to dial out? I wonder if it is a sub-audiable tone?

Any ideas or suggestions?

Terry

In Redding, Ca. they use a type 1 Motorola system. The police have a "secure 1" channel. However, about 1/2 the time a scanner can hear both (or one end of the conversation).

Same in TX. There used to be a couple that did it with any card other
than their company's, but they realized they were losing all the
debit/checkcard business. They've also figured out that
Pay-At-The-Pump means they don't need attendants 24x7 to stay open for
gas business all night, and they can maintain larger arrays of pumps
with less attendants throughout the day.

Dave,

Remember, the antenna design for aviation is different from other users. Most antenna designs at least attempt to "squash" the signal so that most of it radiates in a more horizontal direction, with less signal wasted by radiating skyward. The aviation antennas are supposed to radiate "up", with LESS signal in the horizontal direction.

As for used scanners, you might try here: http://www.grove-ent.com/ check the bargain bin.

As you have discovered, scanners that have the mil-air band are few and far between. It's very much a nitch market, or has been up until now. After the events of Sept. 11th, there may be a higher demand for this band, which would result in it appearing on more scanners in a year or two. What's worse, there are, as far as I know, no scanners that offer both trunking and mil-air.

Nope, you've got that bass-ackwards. NiCads have the memory problem, NiMH batteries not only don't have the memory problem, they can be "topped off" with no harm. And as stated, they are higher power than comparable NiCads. I use NiMH batteries in all my scanners and ham gear. But, as previously stated, you should charge your batteries outside your scanner. I use Sanyo 1600mah batteries (Sanyo makes most of the batteries used by commercial batterypack manufacturers) and charge them in a Radio Shack 23-422 charger. I got my batteries at a hamfest, where they generally sell for $2 each.

If you don't agree with the price or method of sale, then don't
bid on it. IMO it's more galling to have to have people like you
bitching about someone liquidating equipment and filling up the
newsgroup with their complaining that most other things that happen in
this group. If you're not interested in the auction, then it's actually
none of your business and is definitely not worthy of you trying to
impress us with your opinions about auctions. But I can see I'm talking
to a brick considering your coming from an AOL address.

## 958. BC350A or BC895XLT for beginner?

Newsgroup: rec.radio.scanner
Date: 2001-10-23 12:56:25 UTC
From: Gene Hackworth <Genex@worldnet.att.net>
Message-ID: <ZNdB7.79938$WW.4141352@bgtnsc05-news.ops.worldnet.att.net>
Source record: 58209

I have a 12 year old son who wants to get involved in scanning. I have looked at (2) different scanners;
(1) BC350A and (2) BC895XLT.

The BC350A seems like a good user friendly scanner set up for first time users with plenty of pre-set channels for about $100.00. The BC895XLT has many more features including trunk tracking and 800 megahertz capabilities for about $200.00. I want to get my son a scanner that is relatively simple to operate but is he going to be crippled reception-wise if he doesn't have the trunk-tracking, 800 megahertz capabilities of the 895XLT? I also don't want to get him something that is overly complex to operate at first. We live in a smaller town (Winter Haven, Fl.)Thanks for any input. -Gene

i have a couple of older scanners for sale

Radio Scack PRO-2003 .....30.00 shipped

Regency D100,,manual,antenna,,25.00 shipped

both 45.00 shipped

both work well,and cover up to about 512MHZ

might do some trading

monte k9dzd@home.com

# 961. Re: BC350A or BC895XLT for beginner?

Newsgroup: rec.radio.scanner
Date: 2001-10-23 13:33:20 UTC
From: Power House <MyEmail@PrivateBox.NET>
Message-ID: <ttasff4ht3btd9@corp.supernews.com>
Source record: 58212

I took a look around in my frequency guides, and as far as the city itself goes, there doesn't appear to be any trucked systems. I'm not sure what county you live in, but it seems that there is a LOT of trucked systems in FL. If you could provide the county name, and any that may be within say, 10 to 15 miles of you, I may be of some more assistance with that. It is possible that a nearby city or county may be using a trunked system, even if your local area isn't. You could possibly monitor there transmissions to, if you wanted...

There is the possibility that he could be missing out on some of the "action" if there is a trunked system near by you, and you don't get the BC895... Then again, trunking can be somewhat confusing at first... I just had my first experience with it a couple weeks ago, when I took a road trip (There are no trunked systems in my area). I have to say, it had me stumped for a little bit... The instruction book made it sound easy, but it took a little more thought to get it going than I had first predicted... Once you figure it out though, it's easy... Should you decide to go with the trunking scanner, and you do have troubles with it, just post up a message, and somebody on here will surely help you through it...

In any case, even if you weren't to get the trunking scanner, your son would still have a lot to listen to. I'm not familiar with the BC350A, but since they are both manufactured by Uniden, they would program the same way. Essentially, the only programming difference would be Trunking portion of the BC895.

Hope that helps you out some... My recommendation would be just to get the BC895. Even if there are no nearby Trucked systems right now, they are still popping up all over the place. If sometime down the road, your area goes trucked, you would be ready for it, without the need to purchase another scanner...

# 962. NEW CHARGER DID'NT FIX! - - - Re: The best NiCad batteries AND chargers for scanners!!??

Newsgroup: rec.radio.scanner
Date: 2001-10-23 13:39:00 UTC
From: Viper56-FW <junk@gordonvideo.com>
Message-ID: <UpeB7.49077$wS2.5960630@news02.optonline.net>
Source record: 58213

I bought a charger. After charging my batteries and testing them at 8.54V, I was disappointed to find that the scanner "low battery" indicator beeps right away at >85% volume.

THIS SUCKS!!

Ok, so this brings me back to one of my original questions; How likely is it that my batteries were destroyed after only THREE charges??

By elimination I believe there are two possibilities:

1) My batteries are no good anymore after only 3 "possibly" bad charges, or maybe from 3 overdischares.

2) My scanner has a short in it's battery compartments circuitry, which limits how much power it can get from the batteries; 8.54V should be enough shouldn't it??

No Mark, I am not aware that it is ridiculous. To believe all muslins are middle east looking is ridiculous. To panic at the sight of a certain skin color is ridiculous. Maybe I misunderstand you Mark. Why should we feel leery of Muslin looking people but not white McVeigh type crackers?

Glenn

Except in Oregon, where self-service gas is illegal.

This means you have no gas in small towns after about 10PM and prices which
average 15-20 cents/gallon higher than neighboring states.

Brilliant.

Hi All,

Let's try this again, surely someone must have at least a copy of the schematic of it.

I'm in need of preferably the whole repair manual or at the least the schematic.

Also, if you have the repair manual or schematic for the 800 XLT and 210 XL, I'd appreciate that as well. Copies are fine. Let me know what you have and price - shipped.

Thanks.

i've heard some 49MHz phones use a sort of digital encoding from the
handset to base instead of actual touch tones. to me, it's always
sounded more like a typical buzzsawish digital burst though. seems
the type of encoding varies by brand. you'd most likely need to sit
down with an o-scope for while and build a decoder on your own, if you
want to decipher that sort of thing off the air.

Does anyone know of a site that has a rewrite of the infamous ICOM R2 Manual? The one that comes with it is atrocious and I can't burn another brain cell. I'm running out of them! Maybe just a set of instructions or something.

John

# 977. Re: NEW CHARGER DID'NT FIX! - - - Re: The best NiCad batteries AND chargers for scanners!!??

Newsgroup: rec.radio.scanner
Date: 2001-10-23 20:51:30 UTC
From: Bob Javits <rjavits@optonline.net>
Message-ID: <mLkB7.50812$wS2.6483654@news02.optonline.net>
Source record: 58228

six fully charged nicad batteries should measure at 7.2-7.5 volts.... if you're charging them to 8.45 or there abouts, you're cooking them... no wonder they failed after only 3 cycles

could be a problem with your charger if it is supposed to cut off automatically, or simply too much time on the charger if it is the simple wall wart type with constant voltage output.

proper charge for a nicad is 1/10 of the current rating for approx . 14 hours... if the battery is clearly labeled as a rapid charge type, higher current can be used for a shorter time.

as previous messages have stated, nimh batteries offer far higher capacity and no memory effect, but they require a special charger designed for nimh, or a much loner time on a wall wart, since they have higher capacity.

i had a pro-39 that eventually wore out the same way, with the
addition of the painted numbers on the buttons rubbing off. as far as
i know, there's not much you can do with the conductive coating on the
rubber buttons. but you should try taking an eraser and some rubbing
alcohol to the metal contacts on the radio end of the keypad. maybe
that's what you already tried? if that doesn't work, you need a new
rubber keypad from radio shack. i remember mine costing something
like $12, ordered through RSU over the phone.

If you don't want to put up a rotor, get the Discone offered by AntennaWarehouse for $28.00 (www.antennawarehouse.com) I have one and its great for all bands including VHF-LO.

Now if you really want an awesome antenna, Antenna Warehouse has a "Log-Periodic Scanner Beam". This antenna is made by the verysame people who make the overpriced "GroveScanner Beam". Antenna Warehouse offers this very same antenna for $54.00 (Grove sells it for $74.95). I don't know why Grove charges $20 more for the very same antenna. I just installed my on a 30' mast with a rotor and can listen to MilAir like its next door. VHF-Lo comes in very well too.

Can someone expand on the limited instruction page as how to
set up the 406 MHz trunked freqs on a bc780xlt?
Also, can the four groups all exist on one bank, so you can
search for the control channel you want, or do all groups
have to have discreet banks to themselves?

~~Bart~~

We have the same problem... Some cops think their channels are private.
They get on there and discuss the cheapest food prices, cigarette prices,
and so forth. It can get VERY intersting at times. What's even better is
when one of the principal of a neighboring county gets on the police band
,requesting the officers, and starts cursing about stuff that is going on
at the school, and so forth. Needless to say, the whole "scanner community"
can't hardly look at the public officials without wanting to laugh.

The ICOM IC R-2 works great for Mil Air You really want to get the computer interface cable for the R-2. Look around the net for deals that include the cable and programming software. It's tough to program manually, I had or read over the manual like eight times to get it to work and CLEARED the memory several times! The free software from the internet sites CLEARS the memory when trying to load up a file.
Make sure the batteries are fully charged before doing any computer Upload/Down load work with this radio.
One reason your not hearing the tower is, the tower may only get out several miles. You should be able to hear the aircraft side of tower comms out to fifteen (15) miles. If you haven't done so already try the SERVICE SEARCH "AIR" on the PRO-91. This should give you alot of aircraft traffic in and around New York.
I use a RELM HS-200 hand held, a Radio Shack PRO-90 and Icom IC R-2
When going to air shows us a set of Walkman headphones with the radios I solder two monaural 1/8 phone plug/cables to a stereo 1/8 jack to listen to one scanner on the right earphone and another scanner or short-wave radio on the left earphone.

No I didn't, if you were paying attention you would have seen the
original poster did when he stated " ...I have to admit when I see a
foriegner of the muslim persuasion I'm a little leary.."

So tell me, how do you interpret that if not racial? What the hell
does a foreigner of Muslim persuasion look like? White, middle age?
Dark skin and young? Old and gray? Yep, all of them.

Oh, so terrorism is based on "international, mutli-billion dollar operation supported by state dollars and cooperation" and nothing else? The acts or causes by these different groups don't characterize them as terrorists, just who and how they got their money and who supports them does. Is there a dollar figure and a number of members that define when you are just a group of wannabes or actual terrorists? Where do you draw that line?

Why not spend less and get more. Buy a UHF/VHF TV antenna, redrill the
mounting holes on the boom for vertical mounting. You can get more
than what $54 from AntennaWarehouse and you can get specs on the
antenna which AntennaWarehouse refuses to disclose after making
ridiculous claims about their so called log periodic.

Another aircraft band receiver/scanner is the Sporty's JD-100
it will do Civilian VHF AM and Military UHF AM simultaneously, twenty
(20) channels and runs on four (4) AA's. The civilian band goes up to
142.975 Mhz. so it's great for air shows, to work the T-Birds at 141.85
Mhz.
Here's there web address <htt://www.sportys.com/jd100>
Thats Sporty's Pilot Shop.

## 1002. Comments on Icom IC-R3??

Newsgroup: rec.radio.scanner
Date: 2001-10-24 12:35:03 UTC
From: jocatch@attglobal.net
Message-ID: <3bd6b4b6.69391920@news3.ibm.net>

I just saw in the back of Monitoring Times an ad for an ICON IC-R3 handheld scanner with built-in video! This looks super neat! A handheld TV with scanner and shortwave! But it sounds too good to be true and probably doesn't work good.

Are there any owners out there with good or bad comments?

I can buy one for $349 via the net but I need feedback first...

Thanks.

You know, the way that you turn these people in is , send a tape of what you hear to the Attorney General in their state. He is their boss, and can launch investigations into their misconduct. You aren`t going to get anywhere sending recording to their boss, since he is probably of the same mentality, and tacitly apporves of what they are saying. As for sending tape to public officials and co-workers, this is also fruitless.

I just looked at the Antennawarehouse website regarding the beam, what
"ridiculous claims" are they making?
I just looked at the Grove website regarding the beam and it appears that both
companies list the same specs for the antenna.
The only thing ridiculous I see is that Grove is charging $20.00 more for the
very same thing.

In my area its hard to find a TV antenna for less than $70.00, plus with the
AnteannWarehouse antenna I didn't have to any drilling or special work to
mount it vertical. And it works like a charm.

> wonder they failed after only 3 cycles

Not true! At full charge, a NiCd cell will be around 1.4 Volts. So six
would be 8.4 Volts. The "nominal" voltage is 1.2 volts/cell. And a fully
discharged cell will be 0.9 Volt.

> proper charge for a nicad is 1/10 of the current rating for approx . 14

> or a much loner time on a wall wart, since they have higher capacity.

The Memory effect in NiCds is minimal in real world situations.

The Radio Shack "All-band groundplane" Cat No. 20-014 does a good job on VHF low band. I think they still sell it. Don't confuse this with the one that has the 19" vertical element.

Glenn you have made a mistake.....

You said "Call any merchant other than Tim and they will answer
anything about the product they sell". Glenn, have you ever been to
a Radio Shack Store?

Glenn, prove me wrong. Goto a Radio Shack and ask them. "Your Discone
is advertised for 25-1300MHZ but can only transmit on 144, 220 etc,
why can't it transmit on all freqeuncies?" See what answer you get.
I bet you don't get an answer but rather a stupid look.

Glenn's second mistake (wow, two mistakes for Glenn in one post).....

You said "Call Grove and ask them a question about their beam
antenna". I did, I asked them why its $20.00 more than Tim's. They
hung up the phone!

Bill

If the people receiving the tapes are the ones being referred to on
them as "Mayor Buttmunch," "Chief Dickhead," etc, it's pretty unlikely
that they'll approve of what's being said.

I used one for a short time before selling it. The video is nice and crisp. I never was successful in picking up anything more than commercial television which included some distant VHF/UHF stations. Other than that, it's basically an R2 with a manual that's not much better. You only have a few buttons to control everything which is a lot! For the wide frequency spectrum not to mention frequency polarities, you would need to stock up on antennas for short wave reception. Some frequencies around 400Mhz are very poor with the existing antenna which seems to be much better in the 8-900 Mhz range. The price you're getting is pretty good. Be prepared to keep a stock of rechargeable batteries on hand since it eats them quickly. So....I guess my impression is that it's a dressed up R2 that eats batteries quickly and the video novelty wears thin quickly.

FWIW If you'll notice, the 350A has no numeric keypad. While this is only a minor inconvenience, it makes programming procedure a bit obscure. I recently programmed one for a friend. It's not really difficult, just a bit strange. It might be daunting for a 12-year-old fledgling scannist, though.

> > antenna which AntennaWarehouse refuses to disclose after making
> > ridiculous claims about their so called log periodic.

> I just looked at the Antennawarehouse website regarding the beam, what
> "ridiculous claims" are they making?

First we have "They have higher performance in the 30-50 MHz. VHF low
band, 108-137 MHz. Aircraft band, 137-174 MHz. high VHF Public Service
band, 225-400 MHz. Military Aircraft and Satellite band, 406-512 MHz.
UHF band and the 806-1300 MHz. UHF/Microwave mobile band, than any
other antenna we have tested in it's price class, and rival the
performance of logs costing many times their price."

Ask AntennaWarehouse which antennas in its price class he is comparing
his "log periodic" to. He won't say. Ask which logs costing many times
the price of his claimed log is he comparing to. Silence from Tim at
AntennaWarehouse. Go ahead George, ask them.

> I just looked at the Grove website regarding the beam and it appears that both
> companies list the same specs for the antenna.

They list frequency coverage. I don't really call that much of specs.

> The only thing ridiculous I see is that Grove is charging $20.00 more for the
> very same thing.

Do you notice that Grove doesn't claim to be selling a log periodic
antenna and AntennaWarehouse claims their beam is a log. Is it really?
I can't tell from the pictures but have you ever seen a Log with a
feed point in the middle of the array? Have you ever seen a Log with
the cross conductors along the boom like a YAGI BEAM?

> In my area its hard to find a TV antenna for less than $70.00, plus with the
> AnteannWarehouse antenna I didn't have to any drilling or special work to
> mount it vertical. And it works like a charm.

That is fine, you seem to know what you are getting, a TV antenna. You can go to the Shack and spend $40 for one with more gain and all you have to do is drill a couple of holes. Home Depot and Lowes have similar antennas and prices. That really isn't the issue though George, AntennaWarehouse's claims and refusal to back them up is. Did you miss the early exchange between AntennaWarehouse and I? Here is the first round:

**AntennaWarehouse: "Hi, We now have log periodic scanner antennas in stock for $63.70 shipping included. These antennas were specially made for us, and after extensive testing over the summer were found to have performance that rivals that of logs costing many times our price.
They can be view in the Scanner Antennas / Base Antennas directory of our website at: http://www.antennawarehouse.com/"

**Glenn: "...and which antennas might these be???
Do you have any specs available on this antenna? You make quite a few claims on your site, do you mind backing them up with some specifics? How come it covers down to 30 MHZ but you can't transmit of 6 meters?"

**AntennaWarehouse: "I must admit to chuckling as I made the the post, knowing your crumugeonly self would retort in this way. Glad to see you did not disappoint me. It is so nice to start the day with a good laugh.
Since you take it upon yourself to be the newsgroup antenna cop, why don't you buy one and and test it yourself against your high dollar log? Then you can come to the group and report YOUR findings.
You know, it's goes something like, "do something useful, rather than give people who have a excellent track record of providing good antennas
at great prices a hard time".
As to your one legitimate question, don't tell me you do not understand the difference between a antenna's resonance, and an antennas
feedpoint impedance? Shame on you, and you portray yourself as the group's antenna expert.
Now, I would love to hang around and debate with you, however I am just to busy selling antennas to spend much time sparring with you. I just popped in to let folks know of the latest great deal we have. So you will just have to find someone else to pester.
---

A real con..ummm pro this Tim is. If you can't give any real answers cry foul and refuse to answer the questions.

> excited,but I am not racially motivated by any means....thanks..

I understand your fear but you are racially motivated if you can't
answer my questions. America did the same to the Germans and more so
to the Japanese in WWII.

Just because you are paranoid doesn't mean they all aren't out to get
you. :-) (big grin!)

Be strong, be brave and most of all don't panic. If you believe in a
God then put your faith in his choices and if you don't believe well
sh*t sometimes happens. Good luck to us all.

That's a good price for a discone, but I wouldn't recommend it for VHF-LO.

Their own comments on the website say, "Superb reception from 100-1300 MHz." And the claimed 2:1 VSWR bandwidth is 120 to 1300 MHz. My old Radio Shack discone (without the vertical element) rolls off badly below 100 MHz.

The claim that this discone has "as much as 7 dB gain" is a joke unless the reference is a wet noodle!

Glenn, I didn't have to ask him, when I was asking about various antennas Tim emailed me telling me which high priced Log they compaired it to.

> They list frequency coverage. I don't really call that much of specs.

However they did tell you the very same info as what Grove is telling you but you don't condem Grove for charging $20.00 more for the very same antenna.

The feedpoint of the antenna I received is at the front, not the middle so you've got me confused on your point here. Regarding the use of the term Log Periodic, Radio Shack from time to time have used the very same term in its advertising when refering to their TV antennas!

>

Come to the HomeDepot in Daytona Beach, they don't carry TV antennas here. I really don't know why but they dont.

> That really isn't the issue though
> George, AntennaWarehouse's claims and refusal to back them up is. Did
> you miss the early exchange between AntennaWarehouse and I? Here is

Every question I've asked Tim was answered, every order given to Tim was proccessed in a fast an professional manor, and every email sent to Tim was answered in a fast and courtious manor. This is MORE than I can say for Grove Ent. and Bob Grove (and yes I can back my claims with emails I've received from Mr. Grove!).

In you're earlier exchange about this antenna you made mention of Tim being a con. Sorry, I've dealt with him various times and the only con I see is Grove for charging $20.00 more for the very same product.

I bought my Log beam from Tim and very happy with it. Sure I could buy a Create or KML Log and probably have a better antenna. But I've found that Tim's antenna gives me the performance needed for 1/3 the cost of a KML and 1/4 the cost of a Create.

Unless your scanner has exceptional intermod immunity (few do), adding a preamp may cause you much grief. A broadband preamp can be especially troublesome as it will amplify any nearby paging or other tranmitters in the VHF/UHF spectrum.

Ideally, you would want a preamp with a low noise figure (e.g., <2dB) and a passband that includes only the frequency range of interest (in this case 225 to 400 MHz). I don't know of any that meet that criteria.

True, Antennawarehouse.com advertises the $28.00 discone's range 100MHz to 1300MHz. However they have the "Super Discone" for $40.00 which is 25 Mhz to 1300 MHz. I have the $28.00 version and it's find for VHF/lo if you're close to what you want to hear but the SuperDiscone would be better.

Grove also has a 25Mhz - 1300MHz discone, but at $129.00???? Why pay 300% more for the same performance?

Most "Gain" claims are very subjective. Note, his website says "Up to 7 Db gain". Up to means that you could experience 7dB, not that you Will experience 7db gain.

George

Well share the secret George. Odd he is afraid to discuss the issue
here isn't it. He makes the claims on this forum but refuses to back
up what he says here. What do you call that George?
> >

Grove doesn't claim his is the best and performs better than logs
costing many times more does he?

> > Do you notice that Grove doesn't claim to be selling a log periodic

That is really strange. The sign of cable and satellite TV I would
guess.

Why does Tim refuse to explain or clarify his statements he made on
here? I wasn't rude or argumentative with him yet he slams me and runs
from the facts. Why would that be George?

> In you're earlier exchange about this antenna you made mention of Tim being a con.
> Sorry, I've dealt with him various times and the only con I see is Grove for

Very same product? Tim claims they are specially manufactured for
them. What gives here? How could they be the same????

> I bought my Log beam from Tim and very happy with it. Sure I could buy a Create or
> KML Log and probably have a better antenna. But I've found that Tim's antenna gives

Seems you need more, I saw you asking about putting an amp on that
beam.

Will look forward to you posting the antennas Tim tested against his.

Claims can be anything you want them, of course. A gain claim of 7db
with a discone is pure nonsense.

> Note, his website says "Up to 7 Db
> gain". Up to means that you could experience 7dB, not that you Will experience
> 7db gain.

There is no way ever a discone with have 7db gain. If that isn't a
clear act of deception then its pure ignorance.

## 1028. Yupiteru MVT-7100

Newbie here. Checking the web for info I found that there are some deetailed operational manuals for some scanners, including some Yupiteru models, but alas not the MVT-7100. The manual that comes with the unit is pretty basic, and it would be useful to know of any tips and tricks with this unit. Anyone know of anything worth reading on it?
Cheers
Baz

Are you sure you charged all of them? My charger doesn't put the batteries in series, and sometimes I have not made proper contact with one of the batteries and the charger contacts. Three charged just fine, one didn't charge at all. Now I make sure they're all firmly seated in the charger.

BTW, I got a Radio Shack pulse charger on closeout some months back; except for the above-mentioned problem, it is great! Std nicads charge in an hour, hi-capacity NiMh in 2-3 hours, and they never even get warm!

Well the old 850AH are the ones at 8.32V(last test). The new 1000mAh
batteries are showing 7.65V.

The following are additional testing I did on 3 sets of batteries in my
scanner(Pro-62). They indicate the scanner's performance at any given
voltage. I look at things like: When exactly does my scanner begin to fail?
How do the batteries hold up under load?

I am beginning to strongly suspect my scanner as the problem, which is
unfortunate because I don't have the money right now for repairs. I would
like to repair it myself but I need a schematic atleast. Here are the test
results:

TEST #1
New Radio Shack 1.2V NiCad with 1000mAh
Scanner no load:
8 cells no load: 7.65V

Scanner Load tests:
7.42V +/-1V Scanner On/Volume 0
Raised volume slowly until . . .
7.39V Low battery beep(No signal; static)
7.41V Low battery beep(signal)
7.39V Audio distortion and coloration/harmonics
7.34V Volume at MAX(static)

Effect of scanner light:
7.38V Scanner in seek mode(light OFF)
7.33V Scanner in seek mode(light ON)

Power save feature's effects in power consumption:

7.39V Active mode
7.56V-7.40 Power Save Mode

TEST #2
2-3 year old Radio Shack 1.25V NiCad with 850AH
Scanner no load:
8 cells no load: 8.32V

Scanner Load tests:
8.09V +/-1V Scanner On/Volume 0
Raised volume slowly until . . .
7.84V Low battery beep(No signal; static)

7.95V Audio distortion and coloration/harmonics
7.97V Volume at MAX(static)
7.92V Volume at MAX(signals)

Effect of scanner light:
7.92V Scanner in seek mode(light OFF)
7.85V Scanner in seek mode(light ON)

Power save feature's effects in power consumption:

7.39V Active mode
7.56V-7.40 Power Save Mode

TEST #3
Brand New Unused Alkaline (Duracell) 1.599V with 1500mAh(I think?)
Scanner no load:
8 cells no load: 9.53V

Scanner load
9.02V +/-1V Scanner On/Volume 0

Raised volume slowly until . . .
9.06V General listening level NO Low battery beep!(No signal; static)

No distortion and coloration/harmonics
8.99V Volume at MAX(static)
8.84V Volume at MAX(signals)

Effect of scanner light:
9.04V Scanner in seek mode(light OFF)
8.76V Scanner in seek mode(light ON)

> batterypack manufacturers) and charge them in a Radio Shack 23-422
charger.

I bought the same charger, but I still have the same problem.

The following are additional testing I did on 3 sets of batteries in my scanner(Pro-62). They indicate the scanner's performance at any given voltage. I look at things like: When exactly does my scanner begin to fail? How do the batteries hold up under load?

I am beginning to strongly suspect my scanner as the problem, which is unfortunate because I don't have the money right now for repairs. I would like to repair it myself but I need a schematic atleast. Here are the test results:

TEST #1
New Radio Shack 1.2V NiCad with 1000mAh
Scanner no load:
8 cells no load: 7.65V

Scanner Load tests:
7.42V +/-1V Scanner On/Volume 0
Raised volume slowly until . . .
7.39V Low battery beep(No signal; static)
7.41V Low battery beep(signal)
7.39V Audio distortion and coloration/harmonics
7.34V Volume at MAX(static)

Effect of scanner light:
7.38V Scanner in seek mode(light OFF)
7.33V Scanner in seek mode(light ON)

Power save feature's effects in power consumption:

7.39V Active mode
7.56V-7.40 Power Save Mode

TEST #2
2-3 year old Radio Shack 1.25V NiCad with 850AH
Scanner no load:
8 cells no load: 8.32V

Scanner Load tests:
8.09V +/-1V Scanner On/Volume 0
Raised volume slowly until . . .
7.84V Low battery beep(No signal; static)

7.95V Audio distortion and coloration/harmonics
7.97V Volume at MAX(static)
7.92V Volume at MAX(signals)

Effect of scanner light:
7.92V Scanner in seek mode(light OFF)
7.85V Scanner in seek mode(light ON)

Power save feature's effects in power consumption:

7.39V Active mode
7.56V-7.40 Power Save Mode

TEST #3
Brand New Unused Alkaline (Duracell) 1.599V with 1500mAh(I think?)
Scanner no load:
8 cells no load: 9.53V

Scanner load
9.02V +/-1V Scanner On/Volume 0

Raised volume slowly until . . .
9.06V General listening level NO Low battery beep!(No signal; static)

No distortion and coloration/harmonics
8.99V Volume at MAX(static)
8.84V Volume at MAX(signals)

Effect of scanner light:
9.04V Scanner in seek mode(light OFF)
8.76V Scanner in seek mode(light ON)

I just bought a Pro-2067 mobile scanner (the Pro-92 for mobile use)
I noticed it is Cat # 20-196 A.

The Pro-92 had an A and B model...

Is that true for this model too???

Let see. To spread fear and terror about "a foriegner of the muslim
persuasion" which is nothing but ignorant profiling is okay in your
book but to use the word white and cracker in the same sentence is a
hate crime? BAWAHAHAHAHAHAHAHAHA!

Sounds like the logic of a bigot to me.

Little did I realize upon posting the original post, that the "sign of the times" was not really what I pointed out hearing on the local freqs. but rather the diatribe that followed in subsequent posts.

Rather sad that when one merely mentions things being heard on the radio trying to see if anyone else was hearing like items, that it turns into a hateful racist topical diatribe of nonsense.

I was neither trying to be critical of the police or the concerned citizens or for that matter the innocent "middle eastern" looking people caught in the middle of this god forsaken mess. I was merely trying to point out how radio calls have migrated to reflect the events we are witnessing on a daily basis lately in the media. Hundred mile an hour reckless driver calls have been replaced at times with "suspicous" activities calls.

With this said.....CAN WE ALL GET FUCKING ALONG NOW? ;-)

Yes, and in the Crusades the Christians killed thousands of others. Does that make the entire religion as a whole inherently bad?

There are /millions/ of Muslims around the world who are as peaceful as people of other faiths. From what I've read, Islam is a peaceful religion and the people who commit these heinous acts are a tiny minority who "creatively interpret" the words of the Koran for their own ends. Do not judge all of Islam by the acts of a few extremists.

I myself am a non-believer, but I feel that people should not be discriminated upon based on their religion, nor any other characteristic.

Get the 895 or 780 if you can afford it. The 780 has a feature where
you only have to program the main truncked freq to track the rest.
Only scanner that does this as far as I know.

The most likely reason you can't hear the tower is because they set up the antenna system in such a way to work best in the air, which doesn't cover very well on the ground.

For Sale:

3 week old Radio Shack Pro-2052 Trunk Tracker scanner with 2002 Radio Shack Police Call w/CD ROM and ScanPro2052 software and cable. Radio has 1000 channels and is a trunk tracker. See StrongSignals web site or June 2000 issue of Monitoring Times for a review. Radio of course comes with whip antenna, manual and box. (Software runs under Windows).

Reason for selling: I have just seen the Icom IC-R3 scanner with built-in TV and I want that but can't afford unless I sell the Pro-2052.

Asking $210 and I pay for shipping with the 48 states.

Send email to jocatch@attglobal.net

# 1051. Re: Anttron "Pro-Scan" Base Antenna?

I am not familiar with that antenna, but if you can add more radials like a ground plane, this will lessen the directivity and possibly add a little more gain.
don't forget to take into account of surrounding items. Is it mounted next to the tower, chimney, or the house?

Jason

Nobody told you not to be on guard. What I am asking is how aere you
going to identify a Muslim? What does a Muslim look like?

You can't be on guard very well if you can't identify the enemy can
you?

Still waiting for these good old boys to tell me how you identify a
foreigner and more so a Muslim. They just don't seem to want to answer
the question.

You've proved that "hillbilly hayseeds" don't have a lock on stereotype dumbness!!! I'll take the boring rural or small town life here in n/w Arkansas over 99% of the cesspools called major urban centers any day. In fact I moved from one ten years ago after tiring of being mugged, shot, and burglarized on a fairly regular basis. Maybe if our cops had more murders and riots to attend to, they wouldn't have to resort to idle chit chat to keep occupied. And as so many others have pointed out, having a few dorks loose on a supposedly secure microphone is a national phenomenon, not necessarily isolated to any "sub-culture" in the back woods...
Open mouth, insert foot, chew slowly..
Y'all come back now, heah? Well, on second thought.....

I don't know the configuration of that specific scanner, but normally
the batteries are in series in when in use. Just one duff battery can
make all others appear duff.

When charging externally it is normal to charge the cells in parallel,
however a duff cell may appear to charge but in reality hold no
charge.

To check the batteries are charged loosly connect a 1.5v flashlight
bulb across each battery in turn, if it glows brightly for at least 10
seconds the battery is probably OK.

Next, as you implied you have a multimeter, try measuring the current
taken by the scanner.Put the batteries in the scanner, but place a
piece of paper between two of the cells thus breaking the circuit..
Now connect your ammenter to the battery contact each side of the
paper. Start on a high amp range and drop it down until you get a good
reading. I would expect a reading of some tens of milliamps.

Mike

# 1061. World Wide Radio Club Forum

Newsgroup: rec.radio.scanner
Date: 2001-10-25 19:16:52 UTC

I would like to personally invite you all to come join the World Wide Radio Club & Forum.

The Forum Features A Chat Room, Radio FAQ Data Base, QSL Roll Call.

The Forum also features categories such as, CB Radios, Export Radios, Amplifiers, Antennas, Scanner Radios, Short-wave Radios, Modifications, Vintage Antique Radios, Microphones, Mobile Audio & Video, Home & Auto Repair, Speed World, Off Roading, Hunting & Fishing, Backyard BBQ, Music, plus America Stands United, Business & Personal Web site Advertising, The World Of DX'ing, Product Failures, and much much more, so come take part today!

We have some of the leading minds when it comes to information and help in some of the Technical Forums like, The CB Doctor (Billy Ward), Peakaboo, The Defpom, Happy Hamer, just to name a few.

It has a bunch of great people already there and a bunch that are right here on this newsgroup.

I would also like to invite anyone that has a good knowledge of Radio & Electronics to come and join to help with people and their questions.

The link for the forum is:
http://pub86.ezboard.com/bworldwidecbradioclub

There are over 150 Registered members there already, so come on and check it out.

Hope to see you all there!

I might be wrong and if I am, sorry. I thought all FRS and GMRS had a set power level for each. Five/one watt(s) for the GMRS and a couple hundred mW for the FRS. I don't think one will talk farther than the next.

Source record: 58117

The absolute worst thing you can do is tell government officials that their activities can be monitored by private citizens.

Next thing you know, the local politicians will be spouting off about the need to spend $50 million on a "secure" (digital) system. Especially now, since they can use the "need for security" ruse as an excuse.

Look at what happened with cellular phones. Wasn't any need for legislative action until one of the government's own (Newt Gingrich) was monitored & caught engaging in questionable behavior.

The government would like nothing more than to remove the ability of it's taxpaying citizens to monitor it's activities. Watch in the coming months as attempts are made to do just this...all in the name of "national security", of course.

Don't give them more ammunition. Listen and laugh...but keep it to yourself. Otherwise, the next sounds you hear eminating from your scanners will likely be digital noise.

George,

I just got a Pro-92 and I live in Ormond-by-the-Sea. That about 15 miles from the track. Do you think I can get the Nascar radios that far away?

Also, do you know what the frequencies are for aircraft in our area?

Thanks
Paul

I have the AW super discone on a 30' mast attached to an ICOM IC-R7100.
It seems to work well for me.

The AW super discone measures approx 110", with about half of that above the
mast attachment point.
I am unsure of the RS size for comparison.

I have heard similar police reports...a white panel truck driven recklessly in traffic by men of Middle Eastern appearance...suspicious vehicles parked here and there...things like that. I understand what you were trying to say. But it is impossible to say anything in these newsgroups without some ridiculously long thread of inane, opinionated bullshit following.

You're correct about the power levels.

However, as the owner of four different FRS units from three manufacturers, I've been shocked at the differences. I have a Kenwood, two Motorolas and some Jensen units.

The Kenwood has loud, clear, audio, the best range, and is the one I take mountain biking. In fact, it's pretty much always the first choice. One Motorola, a $60 unit, has slightly better receive tha the rest, but gets hammered by commercial transmitters if the mountain I'm on has an antenna farm. <G> I use this when I need to bring two of my own units. The other Motorola, a top of the line, all the bells and whistles unit, sucks batteries dry in no time flat, and always seems to fall flat when compared to the first two RF performance wise. The Jensens simply suck for anything beyond a wireless household intercomm. Also, they use AAA batteries, which don't have the capacity of good AA batteries.

Oddly enough, the Kenwood was only $55, one Motorola was $60, the other $125, and the Jensens were $15 each on uBid.com. I guess price doesn't mean performance.

In summary, I guess how different engineers work within the same design limits makes all the difference in the world!

Barry

Hi Paul;
You might be able to pickup the pit-crew/crew-chief in Ormond if you're using a good outdoor antenna. However you won't get the actual drivers as their transmitter power is weak. At my house I need a good outdoor to receive the cars, however the crews do come in pretty good in the "rubber ducky" antenna.

You've asked the right person about AirFreqs here! I'm a pilot (just for fun, not for a living). Here's the list of Daytona Freqs:

Tower 120.700
Tower 118.100
Ground 121.900
ATIS 120.050
Clearance Del 119.300
Departure 123.900
Approach 125.800 (Aircraft coming from the north at 3,500' & Below)
Approach 118.850 (Aircraft coming from the north between 4,000' & 7,500')
Approach 123.350 (Aircraft coming from the south at 3,500' & Below)
Approach 127.070 (Aircraft coming from the south between 4,000' & 7,500')
Approach 125.720 (All Aircraft above 7,500')

Put those freqs in and your scanner will be non-stop with airtraffic in the Daytona area.

I know the PRO-92 can't receive them, but if you have a scanner that will receive MilAir and want to hear all the local "Dog Fight Training" in our area (and there is a lot!) let me know and I can give you some freqs for that as well. With 6 Scanners, a Beam w/rotor at 30' and a Discone ant at 25' I get to hear alot.....

Thanks
George

absolutely gold info! Thanks for putting it so well.
I have a 350 and two 700's, identical but with the 800 band. The
programming is a real pain in the rear without number buttons! It is
difficult enough with number buttons.

Get a Radio Shack or Uniden for $50 to $100, even used is fine if it looks
and works like new. Go to Uniden online site, they have a refurbished
bc60xlt scanner with number buttons for only $48! With a warranty! Get the
kid something he can enjoy, not some $200 adult toy you have to worry about
him dropping or damaging. Kids make mistakes.

Or get a BC80 that will get the 800 band too for only $104.
See them here:

http://www.uniden.com/docs/store/itemlist.cfm?cattype=prd&prodcatselect=3

Well, no.

The ECPA of 1986 was LONG before Newt and his issues.

# 1081. Re: NEW CHARGER DID'NT FIX! - - - Re: The best NiCad batteries AND chargers for scanners!!??

> When charging externally it is normal to charge the cells in parallel,
> however a duff cell may appear to charge but in reality hold no
> charge.

These ARE brand new batteries bought to fix the same problem with the 850Ah batteries, and then those were replaced 3 weeks later for another set. That's 3 sets of batteries with the same problem. The oly pattern is that ALL batteries were charged in a POTENTIALLY damaging scanner's built in charger. If my scanner has been destroying these batteries, I have no way of knowing. I need a fresh set of batteries to charge in my new charger and then test. However the fact that BRAND NEW alkalines trigger the low battery indicator seems VERY suspicous. I'm looking towards the scanner as the culprit.

> Next, as you implied you have a multimeter, try measuring the current
> taken by the scanner.Put the batteries in the scanner, but place a
> piece of paper between two of the cells thus breaking the circuit.

I'm not sure you realize how my battery pack looks. It's a box with three batteries on both sides. The batteries lay side by side in reverse(alternating) positions. In this configuration putting paper between 2 cells would do nothing . . . right?

> Now connect your ammenter to the battery contact each side of the
> paper. Start on a high amp range and drop it down until you get a good
> reading. I would expect a reading of some tens of milliamps.

I'm a cheap bastard. I lost my old meter(MY EX!!) and I replaced it with the cheap but neat RS meter. Only Ohms, Continuity, AC/DC, Diode!!

Ignore him, nobody forced him to read the post.

It's been fun watching your brain be picked!

Sounds more and more like your scanner may be eating batteries for
fun.

The Radio Shack PRO-2052 will do Military Air along with conventional
frequencies OR Multi Trunk tracking and under computer control the
PRO-2052 will simultaneously work Mil Air, Conventional and trunking
however this comments the computer to radio control, I don't know if the
computer control application can be minimized,while operating the
PRO-2052 so that it runs in the back ground. While using a computer for
other tasks.
The Unden BC 780 XLT dose Mil Air and simultaneous trunking and
conventional,tone squelch also computer control.
Check out the trunking radio reviews on the trunking board at:
<http://www.strongsignals.net>

With a note that the post was Way Way Off Topic

> Not only that - you're a (faceless) coward, much like Osama.

You, purple stain you don't even have the guts to use you name you
parasite, I at least have the balls to stand by what I say and use my
real name. Something a gutless cur like yourself would never have the
intestinal fortitude to do. You prefer to hide like the true coward you
are. You have much more in common with that insane terrorist than I.

So why don't you just ooze back into that primordal slime from whence
you came.

Sometimes bigger is better, but not necessarily so with antennas (unless you want a discone for HF).... What's it's shoe size? (;->))

It looks that you are right...

I have been using a Yaesu VX-5R to monitor regular VHF/UHF channels
lately and to be informed of the major events I found out I only have
to keep my eye on:

SOD-1 470.8370, 136.5
CW1 470.6870, 100.0
NCPD 4/5 477.2120, 179.9
FDNY CW 154.4300
EMS CW 478.0120, 85.4

Am I missing anything?

Rosty

Hi,
Thanks for the information. On Wednesday I ordered the Stridsberg 4 Port Coupler for $160.00 from www.scancat.com. Received it on Thursday and have 2 PRO-2035's, a PRO-2052, and a PRO-2006 pluged into it. All four scanners working great, no lockups on any freqs and stronger sigs then before. All four scanners are on an AntennaWarehouse.com Scanner Beam.

Actually, your region has *become* a cesspool in the last few years. Thanks to the hordes of Mexicans (most of whom are illegals) who have infiltrated the area, NW Arkansas is quickly beginning to resemble a third-world country.

Gotta love Tyson and the others for opening all those processing plants. Cheap labor attracts illegals like flies on you-know-what.

No hablo Espanol, amigo? Tough. You better learn. We've taken over your town and replaced your language/culture with our own. English-speaking Anglos need not apply.

You have a nice day.

AMATEUR RADIO NEWSLINE(tm) REPORT #1263 - OCT. 26, 2001

Amateur Radio Newsline report number 1263 with a release date of
Friday, October 26th, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The ARRL says to get ready to fight to protect the 70 centimeter band and the FCC says to stop sending paper to its Washington office. These stories are first on Amateur Radio Newsline report number 1263 coming your way right now.

(Billboard Cart Here)

**

FORCED SPECTRUM SHARING: BATTLE LOOMS OVER PART 15 ACCESS TO 425-435 MHZ

The American Radio Relay League says that a battle is looming with the FCC over the agency’s proposes changes to its Part 15 rules governing unlicensed devices. Changes that would allow operation of advanced radio frequency identification devices between 425 and 435 MHz. And it could spell the word trouble for ham radio as we hear from our South-East Bureau Chief, David Black, KB4KCH.

--
The ARRL Letter explains the League's position. The FCC has decided to grant a request made earlier this year by SAVI Technology Inc. SAVI wants to us the spectrum for radio frequency package identification tags. To help make that happen, the FCC is issuing a Notice of Proposed Rule Making.

In comments on the VHF Reflector, Russ Pillsbury, K2TXB, discusses SAVI. He describes it as a big, multi-national company with significant worldwide funding. Pillsbury also says SAVI has large United States defense department contracts as well.

SAVI Technology sells radiolocation and wireless inventory control products. SAVI says it needs the rules change to meet customer demand for increased radio frequency identification system capabilities. And the FCC says it agrees with SAVI. The Commission says changes
to its Part 15 rules would allow more advanced radio frequency ID systems on the 433 MHz band and would serve the public interest.

The Commission proposes creating a new section to Part 15. It would allow operating radio frequency ID systems between 425 and 435 MHz. Transmissions could be up to two minutes at a time. Maximum field strengths would be at the level now permitted only for extremely short-duration, intermittent control signals. And that's what ham radio operators don't like. They see that as a high potential for interference to Amateur Radio operations nationwide. And

it's why the ARRL fiercely opposes the rules change.

The League takes a strong stand. The ARRL says the FCC has set the stage for another battle between amateur and commercial interests. League Executive Vice President Dave Sumner, K1ZZ, accuses the FCC of not having thought this one through. Sumner normally expresses ARRL Board policy. He says the Part 15 radio frequency identification proposal is: "contrary to the whole philosophy of the Part 15 rules."

Sumner says the radio identification devices SAVI proposes belong on other frequencies--specifically, those authorized for use by devices regulated by FCC Part 18 rules. Those regulations cover Industrial, Scientific and Medical devices. The FCC counters, saying the proposed rules change dealing with the ID systems is to harmonize its own rules with those in other parts of the world.

But Sumner fires back. He says 433.9 MHz is allocated for Industrial, Scientific and Medical devices only in ten European countries but not in the rest of the world. And it is not permitted in North and South America which make up I-T-U Region 2.

From the South East Bureau in Birmingham Alabama, I'm David Black, KB4KCH, for the Amateur Radio Newsline.

--

Another portion of the proposed rules change involves the Industrial, Scientific and Medical frequency allocation at 13.56 MHz. Dave Sumner says at first glance that proposal might permit increased emissions in the bottom 10 kHz of the 20-meter amateur band. Sumner adds that the ARRL will take a closer look at this section of the overall proposal before assessing its interference potential. The entire Notice of Proposed Rule Making and Order is contained in ET Docket 01-278 is available on the FCC website at www.fcc.gov and the ARRL Website at www.arrl.org. (ARRL, K2TXB, VHF Reflector)

**

FORCED SPECTRUM SHARING: FCC ISSUES 430 MHZ EXPERIMENTAL LICENSE FOR SOCAL

Hams in Southern California are on alert after the FCC issues an Experimental License to Digital Wireless Corporation in Los Angeles to test its systems in the 420 to 430 MHz Amateur Radio band. Digital Wireless Corporation is a manufacturer of secure, all-digital, Internet-linked trunked and non-trunked dispatch radio equipment that provides secure conversations and seamless network coverage for business, government and military users. The license with the call sign W-C-2-X-K-K permits holder Brent Jaybush and Digital wireless to operate within 5 km of their factory in Los Angeles through February 01, 2003. (FCC, ARNewsline(tm))

**
FORCED SPECTRUM SHARING: ARRL - NO COMMERCIAL USERS AT 2390-2400 MHz.

The ARRL says that it urges the FCC -- ‘in the strongest possible terms' -- to make no commercial allocations in the 2390 to 2400 MHz primary Amateur Radio

Service allocation. In a bulletin to its members released on Wednesday, October 24th the League did however tentatively suggest hams might be willing to share the band with compatible government services that are displaced to make room for advanced wireless systems.

In its communication to the regulatory agency, the ARRL tells the FCC that advanced wireless systems are fundamentally incompatible with continued amateur access to the band.' The ARRL says the federal government 'has historically been a compatible sharing partner and that government uses would offer 'the least disruptive opportunities for sharing' in the band. (ARRL Bulletin)

**

RESTRUCTURING: NEW LICENSING REGS IN NEW ZEALAND

It’s a nation that now only has two license classes and a 5 word per minute code test. This as New Zealand joins the worldwide move toward simplifying the entry to ham radio. Amateur Radio Newsline’s Jim Meachen ZL2BHF has more:

--

The introduction of New Zealand’s Radiocommunications Regulations 2001 has brought changes for Amateur Radio Licensing in New Zealand. Forthwith there are only two classes of Amateur Radio Licence available -- The Limited and The General. The Novice and the Novice/Limited licences grades have been removed.

The Limited licensing procedure remains unchanged and the General licensing procedure is changed by the lowering of the Morse Code test to 5 words-per-minute. Novice and Novice/Limited licences will no longer be granted. Existing licences in these categories will remain valid under the new Regulations and with their original licence provisions.

New Zealand’s Licensing Authority the Ministry of Economic Development is encouraging existing Novice and Novice/Limited licensees to review their qualifications to see if they now meet the requirements of the new General Licence.

Amateur who have passed the previous Novice Morse test of 6 wpm and attained a pass of 50% or more in the theory and regulations examination, or 66% or more in the new multiple-choice computer-generated examination now meet the requirement for a General Licence and can immediately submit an application for an upgrade.

The existing ZL callsign grouping that indicates the class of licence of the holder will remain in force. This will require all licensees upgrading to a General licence to obtain a new callsign.

Included in the new Regulations is a long awaited provision for variation to the manner in which an amateur examination is carried out if there is need to vary the examination process for a candidate with a particular disability. Variation will be at the Chief Executive's discretion and the Ministry will deal with each case as it arises.

It is expected that the New Zealand Association of Radio Transmitter Morse Examiners will test at 12 wpm on request for those who may wish to meet this higher operating standard for overseas travel.

From Auckland New Zealand I'm Jim Meachen ZL2BHF for Newsline.

--

With more and more nations turning to 5 words per minute Morse testing, it appears as if it will soon be the standard -- worldwide. (NZART, ZL2BHF)

RADIO AND THE WAR: FCC STOPS ACCEPTING FILINGS IN ENVELOPES

If you are planning to write to the FCC in Washinton D-C – the word is – don't. This as the agency issues a public notice saying that filings enclosed in envelopes will not be accepted until further notice.

The reason is the same as the one CQ Magazine stated last week when it said it will no longer accept mailed in paper logs – the possibility of bio contamination. And while the FCC notice makes no direct reference to the anthrax scare, the Broadcasting and Cable newsletter says most view it at as a precautionary.

In a nutshell, heres what the FCC says to do. Document filers and messengers delivering paper communications to the agency will be asked to dispose of envelopes in a receptacle outside of its Washington, D.C., headquarters. Mail and packages delivered to the agency will be opened at an off-site location. If you must send a paper filing to the FCC, the only way it can be done is by clipping the papers together with a rubber band or other fastener with no envelope. Then you either hand carry it or courier it to 9300 East Hampton Drive, in Capitol Heights, Maryland. Those requesting confidential treatment of their documents must have materials placed in commission-provided envelopes. The FCC also says that filers have the option of submitting any document electronically.

And what about filings by U-S Mail to the Gettysburg Licensing facility in Pennslvania? Items like ham radio license renewals and the like? According to the ARRL Letter, the public notice on FCC mail makes no mention of any change in procedures regarding filings in envelopes to Gettysburg, but that could change at any time. (Broadcasting & Cable, ARRL)

**

RADIO AND THE WAR: RADIO SOLO HEARD IN THE USA

Last week we reported that the United States has been air dropping Bay Gen wind up radios into Afghanistan. We also said that the government six EC-130 planes that make up the Air National Guard's Commando Solo fleet serve as flying radio stations. Now we can give you an idea of what the airborn transmission to the Afghan populations sounds like. Take a listen:

--
Audio here
--

That signal was reportedly recorded by a shortwave listener on the U-S East coast on October 18th and posted to the Internet. And while we do not know exactly what's being said, an English translation posted to the Pentagon's website indicates its probably a transmission to Taliban fighters and might well say: "When you decide to surrender, approach United States forces with your hands in the air. Sling your weapon across your back muzzle towards the ground. Remove your magazine and expel any rounds. Doing this is your only chance of survival." (shortwave.com, ARNewsline(tm))

**

RADIO AND THE WAR: A RUN ON RADIOS

One of the hottest selling consumer electronic items since September 11th is the scanner radio. According to several news reports, the people buying them say that it gives them a sense of security knowing what's taking place in the community in light of the terror attacks on New York City and the Pentagon.

One story says that the Radio Shack chain, based in Fort Worth, Texas, has reported a major increase in sales. The same with such dealers as Scanner World USA, a mail-order business based in Albany, N.Y., and Uniden America Corp. of Fort Worth. In fact, some retailers report sales are up 10 percent to 30 percent compared with the same period last year.

That article quotes Norm Schrein, KA8PGJ, who is president of the Bearcat Radio Club in Dayton, Ohio. Schrein says he went to a trade show in Peoria, Illinois, four days after the attack. Business was so brisk that his stock of scanners was all but cleaned out.

But scanners are not the only hot product running off dealer shelves these days. All-band shortwave radios are running a close second. According to one news story the lure of shortwave receivers is that they allow for listening to broadcasts from around the world, including airline, shipping and military communications. Other reports say that shortwave gives the public yet another avenue to get news items not regularly reported by the U-S press. (Various published news reports)

**

ENFORCEMENT: DON'T USE ILLEGAL GEAR FOR BUSINESS

A Kentucky towing company is told to stop using the ham bands to communicate. This after the FCC receives complaints that the company's trucks have been heard on 10 meters. Riley Hollingsworth, is the FCC's Special Counsel for Amateur Radio enforcement matters:

--
Hollingsworth: “We sent a warning notice to STI Towing and Repair in Walton and Florence Kentucky about using 10 meter Amateur equipment in their business operation. Related to that, we sent a warning to an employee licensee of the company [named] Robert McCoy, N4ZTA of Florence Kentucky about the same matter.

Now that employee may have equipped the trucks wth unlicensed equipment. The trucks are tow-trucks number 21, 27, 52, 97, 99 and RR4 operating in the Walton and Florence Kentucky areas.”
--
STI Towing and Repair was given the usual time to respond. (FCC, RAIN)

**
ARRL MEMBERS: THE LEAGUE NEEDS YOU IN THE CC&R EFFORT

If you are an ARRL member, listen up. This one is for you.

Have you ever been denied the ability to put up an antenna, or to operate an Amateur Radio transmitter? Have you had any other restriction on your Amateur Radio activities because you live in a housing development or condominium complex governed by private land use regulations? Well, the ARRL Board of Directors has adopted a goal of trying for legislative action that helps overcome the unreasonable restrictions of C-C-and R’s that prohibit or restrict Amateur Radio antennas. And you can help. Heres how.

According to the ARRL Letter, the league has a sample letter at its website. That’s in cyberspace at www.arrl.org. If you are affected by a CC&R, or know someone in your Congressional district who is, please adapt the sample letter to your own situation and consider sending it to your member of Congress. And if you decide to write please send a copy to the ARRL's Office of Legislative Affairs.

To find your Senator's mailing address check www.senate.gov/contacting/index.cfm. To find your Representative's, check www.house.gov/writerep. (ARRL)

**

AWARDS: DARA OPENS NOMINATIONS FOR HAM OF THE YEAR

The Dayton Amateur Radio Association says its opening the nominating period for the 2002 Dayton Hamvention Awards. There are three awards presented each year. They are the Radio Amateur of the Year, Special Achievement, and Technical Excellence.

The Radio Amateur of the Year is described as the special person who has made a long term commitment to the advancement of amateur radio. We are looking for a well-rounded individual who has contributed to our hobby in some outstanding way. The Technical Excellence award is for the person who has made an outstanding technical advancement in the field of amateur radio while the Special Achievement Award is reserved for the ham who has made an outstanding contribution to the advancement of amateur radio. This latter award is usually given to a respected amateur who spearheaded a single significant project.

All amateurs Novice through Extra are eligible. Awards are decided by the Awards Committee, based partially upon the information received. Magazine articles, newsletters, newspaper clippings, videos and the like are appreciated but cannot be returned. The deadline for nominations is January 31, 2002. Nominations can be submitted by US Mail to Post Office Box 964, Dayton Ohio 45401 or by completing the convenient e-form on the web at www.hamvention.org. (DARA)

**

NAMES IN THE NEWS: HAP HOLLY KC9RP TO SPEAK IN L.A.

If you live in the Los Angeles area, and have never had the opportunity to meet RAIN Producer Hap Holly, KC9RP, you will have you chance very soon. This as Hap and his wife Stephanie venture west to the City of Angeles for a speaking engagement by KC9RP.

Hap will be the guest of the TRW Amateur Radio Club at its Thanksgiving Awards Banquet the evening of November 10th. There is one caveat. This event is for active TRW Radio Club members and their guests only. More information is on the web at www.w6trw.com under the subject Annual Banquet. (ARNewsline(tm))

**

NAMES IN THE NEWS: W4WYR NAMED A “CHAMP”

The ARRL Letter says that Southeastern Division Vice Director Evelyn Gauzens, W4WYR, is the recipient of the 2001 Citizens' Ham Mobile-Marine Patrol or CHAMP Award. Gauzens was selected for her work as co-founder of the famed Miami Tropical Hamboree ham radio convention and as being a prominent community activist. The South Florida FM Association, Citizens' Crime Watch, and the Miami-Dade Police Department established Citizens' Ham Mobile-Marine Patrol in 1994. (ARRL)

EMERGING TECHNOLOGY: HIGH SPEED INTERNET CONNECTIONS GROWING

It won't ever replace ham radio for versatility, but high-speed lines connecting people to the Internet increased by 63% during the second half of year 2000 That’s a total of 7.1 million new connections. Of the 7.1 million high-speed lines, 5.2 million were residential and small business subscribers. The CGC Communicator says that the rate of high-speed growth for the full year of 2000 was 158%. (CGC Communicator)

**

ON THE AIR: CULBERTSON A HIT AT JOTA 2001

Astronaut Frank Culbertson left a global trail of excited Scouts the weekend of October 20 th as he made rapid-fire QSO's during the worldwide Jamboree-on-the-Air. The commander of the Expedition Three crew on board the International Space Station used the NA1SS call sign to rack up contacts in many places including Australia. There on Saturday, the 20th, Tony Hutcheson, VK5ZAI, took a portable station to the Riverland Scout Hall where a crowd of about 60 watched as one of the senior Girl Scouts asked Culbertson a question. Back here in the United States, sixteen Boy Scouts from Troop 48 in New Orleans gathered at the station of K5CFW, to pull off a quick QSO.

On the early afternoon pass over the U-S, KD4SFF, using the phonetics "Scouting for Fun," set up a station in his backyard in Greenville, South Carolina. He had five Scouts from Boy Scout Troop 555 over. Frank told one of them that he had grown up in South Carolina, and that he, too, had been a Scout.

Culbertson has been very active on the 2 meter band from the ISS. He talks to several schools each week as well as numerous open QSO’s worldwide. (AMSAT)

**

HAM RADIO IN SPACE: NEW STATION AT UK NATIONAL SPACE CENTER

A new Amateur Radio Satellite Service ground station has been opened at the United Kingdom’s National Space Center in Leicester. Using the call sign GB2NSC the station will operate at the heart of the center in the 'Space Now' attractions area, That’s the same location where the National Space Center Amateur Radio Society is demonstrating how to contact amateur radio equipment on board the International Space Station. (GB2RS)

**

SCIENCE AND SPACE: NASA’S GOLDIN ANNOUNCES RETIREMENT

Daniel Goldin, who pushed NASA to be leaner and faster and then came under fire for it, says he will retire from the space agency next month. after nearly 10 years in the job. The longest-serving administrator of the National Aeronautics and Space Administration Goldin will leave in mid-November with a record of 160 successful space missions international space station that is now permanently occupied. Cost over-runs in the billions of dollars are said to have contributed to his leaving the agency. (Published news reports)

**

INTERNATIONAL: WINLINK ILLEGAL TO OPERATE IN VK

It appears that the very popular WINLINK messaging system is illegal to use in Australia. WINLINK is a program and intertie network that provides full-featured digital E-mail transfer, position reporting and weather service to the global amateur radio community where Internet access is not available. But as Q-News Graham Kemp VK4BB, tells us, the Australian Communications Agency says – “no!”

--

In news services this week we see the WIA's Federal Technical Advisory Committee Chairman John Martin VK3KWA reminding operators it's "just not on" to operate this program "down under". John has had discussion with the ACA on the topic, it's not a simple matter of changing the amateur regulations, rather the issue is tied in with legislation including the Telecommunications Act.

John concludes that in the short term there is no chance whatsoever of any change in the ACA's ruling that Winlink is illegal in Australia. Packet radio bulletin board operators should also be very careful about forwarding any Winlink traffic, and preferably filter it for manual checking before allowing it to go through.

--

Currently there are WINLINK nodes in the United States and nations worldwide. The one major exception is Australia. For the rest of the world where it is legal, more information is on the web at www.winlink.org. (Q-News)

**

ON THE AIR: LONG PATH FRIENDSHIP NET.

In this time of turmoil a group of hams from around the world are going to try to bring some light to the end of a rather dark tunnel. This with a new on-the-air fellowship gathering called the Long Path Friendship Net.

The net will start at 1430 UTC, Sundays on 14.165 MHz with K6HAE and WTZ in California and ZS6AN in South Africa as control stations. The founders say that this is a big planet and there are enough natural disasters to be dealt with as well as some sad man-made ones for which the proficient and friendly radio operator is a valued contributor.

Again, that’s the new Long Path Friendship Net every Sunday at 1430 UTC on 14.165 MHz in the Extra segment of the 20 meter band. (Press release)

**

DX

In DX, the ARRL’s DXCC Desk reports that the ZK1NDK North Cook Island operation now good for DXCC credit. Hams who submitted request for ZK1NDK and were denied credit may contact the Leagues DXCC desk and have their records updated without having to resubmit cards. (OPDX, Daily DX, others)

**

THAT FINAL ITEM: REAL SKY HOOKS

And finally this week, you may find this one hard to believe, but its true. It comes under the heading of an honest to goodness sky hook -- and no we are not kidding. Bill Pasternak, WA6ITF, has more:

--

The proposal for these sky hooks comes from ATG industries in southern England. It wants to build reflective airships and have them operate at a height of

65,000 feet.

These craft would be unmanned and would station keep using solar powered electric engines and a lightweight diesel engine. ATG claims that these "skyhook" ships could keep position for up to 5 years. That they could act as a transponders for services such mobile telephones, broadband internet and digital radio.

ATG estimates that nineteen of these sky hook ships could cover most of the U.K. and replace as many as 4000 mobile telephone poles and up to 10,000 towers that are expected to be needed for the new G-3 technology.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF.

--

Its not known how long these sky hook ships will take to develop or if they will ever be deployed. (Telecom Daily)

I didn't say I was forced to read the post, I simply asked why Viper was telling us all this information, this is because I missed his first post. He obviously went to a great deal of trouble getting his results, and I simply wondered why.
You see Glenn, it is loud mouths like you who destroy decent groups like this, with your uncalled for and unwarranted remarks.

Oh Roger you poor beaten dog. I am so sorry to imply that somebody forced you to read these posts. I had no idea you couldn't see all the posts and your "Why are you telling us all this," was meant to be constructive.

Again Roger, accept my apology for that dreadful hate filled remark of mine "Ignore him, nobody forced him to read the post."

God I am so sorry to have been so loud mouthed and insulting. Will you ever be able to get over the trauma? Can you sleep nights yet? Need to seek professional help to bring you down?

Oh God the humanity!!!!!!!!!

Why are you telling us all this Roger?

# 1102. Re: ham radio operators excempt from scanner laws?

Newsgroup: rec.radio.scanner

>also regulate the telephone systems and cable TV which (for the most
>part) have little to do with interstate commerce issues. With the US
>being a nation of commerce, you could probably jam anything under that
>category if you tried but is that really what was intended??

Umm, I beg to differ with you on the issue of whether this is really
the jurisdiction of the Federal Government. If this isn't a perfect
example of an issue of interstate commerce, I don't know what is.

For one thing, manufacturing receivers so that they meet the laws in
all 50 states is not practical, never mind the transmitters.
Secondary radiation issues are not trivial, nor are frequency ranges.
If the Feds don't set the standards for interstate commerce than who
should? What if the TV channels and Cellular telephones used
different frequencies from state to state?

Further, cable TV and telephony are the very tools of interstate
commerce. They need to be standardized so that they can work
together. Who do you think should do that? The states or a federal
commission?

And since the FCC licenses all communications operations, ham radio
should fit right in.

>Presumably, the 'scanner laws' were passed to prevent people from
>interfering with public safety. There is another scanner law here in
>NY under the Penal law:
>
>ï¿½ 140.40 Unlawful possession of radio devices.
<snip>
>This was obviously intended to prevent people from using a police
>scanner in the commission of a crime (and notice there is no provision
>for hams). Personally, I think an overall ban on scanners in vehicles
>(like here in NY) is wrong; there are perfectly legitimate reasons to
>have a scanner in your car. The V&T law should be more specific as the
>above section. But the point is that for a state to pass these laws
>(or even a law to prevent you from owning a police scanner at all!!)
>is not unconstitutional as rtretreter.... was suggesting and are in
>fact more constitutional than the FCC telling states what they must
>do. Being a ham, I am very glad they did though!! :)

Most states and cities don't ban scanners, and only a few ban their use in vehicles where there could be an obvious conflict of interest. I can't say I completely disagree with that notion. However, banning them completely from road vehicles or homes is ignorant and counter-productive.

Note that I used the words "road vehicles". Regardless of what state laws say, news helicopters can monitor police transmissions while flying a mere 300 feet overhead AND THE STATE CAN NOT STOP THEM. Like radio, aircraft are regulated almost exclusively by a federal administration. States have no business regulating what goes on board a vehicle which is clearly designed for inter-state transportation.

So who are the scanner bans hurting really? The little guy. Those folks who want to hear what's going on for themselves. I think the states ought to stay out of this. They have no business telling the public what to listen to. I only wish the FCC had preempted all authority of the states from legislating anything on this issue...

I'm afraid you're painting the "region" with too wide a brush, although what you've said does apply to some select areas. Kind of like big city sweat shops, and other less than desirable occupations that the "locals" anywhere won't touch with a ten foot pole, but consumers (which is pretty much all inclusive) can't get enough of the product. It's refreshing to see your bigotry isn't confined to "hillbilly hayseeds".....

## 1105. How does one find out about local police protocol?

Newsgroup: rec.radio.scanner
Date: 2001-10-26 23:00:39 UTC
From: ophiel_magick@yahoo.com
Message-ID: <3bd9ea34.39522897@news>
Source record: 58006

I have recently started scanning [again] and of course one of the more active areas is listening in on police calls in my area. I live in the midwest, USA. I have the frequencies stored, but the various codes for types of crimes and procedures used by my local police do not match the ones listed in my Radio Shack Police Calls Freq. Guide.

I think it would add interest in listening if I had a better idea what was going on.

Thanks
Ophiel

## 1106. Re:Private Channels

Well, I am wondering...what ever happened to the couple that recorded that conversation (Gingrich) and subsequently had it published? Does the Communications Act of 1934 only apply to lowly scanner users? Or are we (as it's put in "Animal Farm" ) "All animals are equal...some are more equal than others..."?

I have a Pro - 94 and love it. I sure had a lot to learn to scann trunked frequencies though. I dread to think of all the work that went into making these scanners function. I believe Terry Brennan is the hero on that project.

## 1116. Med Trans Air Ambulance Service in Greenville SC

Newsgroup: rec.radio.scanner
Date: 2001-10-27 03:26:17 UTC
From: topflight70env@yahoo.com
Message-ID: <3bda279d.12954323@news-east.newscene.com>
Source record: 58017

Hey Guys I have heard the Greenville EMS Helicopter on 462.975. Just wondering if anyone has heard it on any other frequencies.

Thanks
Waldo

Hey guys help me out. How do you pic up the wireless mics used by the police that work with the incar video camera.

Thanks
Waldo

## 1119. Pro-91 cellular or not?

Newsgroup: rec.radio.scanner
Date: 2001-10-27 04:01:48 UTC
From: Grass Junkie <grassjunkie@hotmail.com>
Message-ID: <MkqC7.434001$aZ.84841910@typhoon.tampabay.rr.com>
Source record: 58020

Hello, over the internet, I have read statements from people saying that they have recieved cell over there pro-91, and other that say that they can't. I say a aution on ebay saying that they can pick up cellular.

What are your thoughts?

## 1120. Telescoping antenna for PRO-43?

Newsgroup: rec.radio.scanner
Date: 2001-10-27 04:23:06 UTC
From: N2 <nunya@nunya.com>
Message-ID: <ttkdndbark84d9@corp.supernews.com>
Source record: 58021

I just scored a PRO-43 off of ebay, and I'm wondering if it's worth the ten bucks to get a telescoping antenna to replace the rubber duckie. I live in Las Vegas (fairly wide open spaces) if that matters.

Also, if anyone has any information about this scanner and/or some tricks, please feel free to share!

Thanks for any input!

Bill

# 1121. Re: sign of da times.....

Newsgroup: rec.radio.scanner

Maybe it has sometime to do with the 19 to 1 odds
One Stupid Timmy McVeigh,he was dumb,but not so dumb that
he thought he would stay in the truck,for a one way ticket to
paradise.
But the 19 Dumb Muslims thought that they would go to paradise,when
they commited suicide,and killed thousands of inocent people.
I where prefer an enemy of stupid surviivalist,who want to live to
tell of their wins,or loses,than an enemy of brainwash people that
believe slaughter of the innocent,and suicide ,brings on paradise.
I believe there should be honor,even in war.
The real Heros brought that plane down in Pennsylvania.We all die
someday,and they chose a heroic death,with hopes that they might even
live.Any brainwashed idiot can kill themselves,and a few innocent
people.But I hardly think that any paradise is waiting for them.
In the long run these people will look as dumb as the Christian
Crusaders of the middle ages.
This is not a racial thing,but a perverted religious one.
The next middle eastern persons I meet might be a future Ghandi,the
next man of Color,the next Martin Luther King Jr.The next light
skinned person might be the next J.F.K.or Abe Lincoln. But if some of
the perverted religionist have there way,then the next guy I meet
might be just as
Dumb,And Stupid as Timmy McVeigh,and his borthers in arms,the 19
Cowards that killed the innocent,not the enemy,when they deliberately
decied on a coward's death,and the slaughter of the innocent.
Richard D.Young

>codes for types of crimes and procedures used by my local police do
>not match the ones listed in my Radio Shack Police Calls Freq. Guide.

You can ask them! Or maybe there are other scanner listeners in your area. Around Kansas City some of the departments use 10-3 instead of/in addition to 10-4. "Smoking J-8" becomes pretty obvious, and there are a few others that become clear after you hear them used a few times.

get arrested in as many different ways as possible....then listen carefully as they talk about you on the radio! lol

sorry couldn't resist......hope ya find what you're looking for, basically tho, thats part of the hobby I think. Listen long enuf and it will pretty much become clear or at least easier to find exact definitions for the local lingo.

>> I have heard the Greenville EMS Helicopter on 462.975. Just wondering if anyone has heard it on any other frequencies. <<

I have no heard communications between the helo and base on any other conventional channel ... 462.975 MHz, with a tone of 123.0 Hz.

They can access the local conventional channels of agencies they are responding to ... for L-Z and patient information.

I'm not sure, but would think they can work the public safety trunked systems in the Greenville area (I can't hear the systems from this area). They may have a talkgroup on the SCANA system.

Bring the battery pack to a hobby shop that sells radio control
airplanes. You'll get a perfect replacement for $12-$18.

Barry

## 1128. RS PRO-2044?

All you'll be able to get are "images" Not the actual frequenies, but a
"ghost" signal, created by the scanner's PLL circuitry.

## 1134. MDTmon source code???

Newsgroup: rec.radio.scanner
Date: 2001-10-27 19:12:22 UTC
From: randycmoore@home.com
Message-ID: <f99c89e1.0110271112.5eb5f5be@posting.google.com>
Source record: 58035

I was hoping that you someone could send me the source code to MDTMon.
I would like to add some features to it:

1 - Threaded conversation screen. So that you can see the
conversations between the officers.

2 - MDT id to Officer #, in case you want to flag converstations from
your favorite officer

3 - Additional right click funtions to the terminals. Such as, delete
all recorded traffic for a particular terminal, print traffic, etc.

4 - Only record traffic for specific term ids.

Can someone tell me where the source code can be found at?

Thanks,
Randy

If you monitor anything below 100 MHz, the whip will outperform the duckie.
The lower you tune in frequency, the longer the antenna should be for most
efficiency.

Cross-posted to: alt.radio.scanner,rec.radio.scanner

What is a "discriminator output" in the context of scanner radios? Is it similar to the audio earphone jack? I have heard that this type of output jack or whatever can be used as part of decoding encrypted &/or digital transmissions. How does this work?

Regards,

Ian Douglas

## 1138. WTB BC760 part

I work security at my college and i just went to the local police station
and told them that we want to be more "professional". I asked if i could
have a list of 10-codes and they said sure.

of course, that will vary with each police department...

The discriminator converts RF to an audio signal. After
that it is mangled with high and/or low pass audio filters.
Discriminator output is unmangled audio. Some radios
have a discriminator output jack, but on many you have
to add it yourself.

It's a must-have for digital signals - some have a DC or
a low frequency component and a high frequency component.
The post-discriminator filtering removes these.

73,
Jim

Mmmmm - Don't see what any of these posts have to do with skydiving , but one thing I noticed
is that one of the posts refers to the fact that Isama gave a great speech surrounded
by adversity.....gee , I think a person called HITLER used to make great speeches
as well. Does that make him a good person? Somehow I think not.

INSANE PEOPLE CAN SOUND "VERY" SANE AT THE BEST OF TIMES.....

The bottom line is that this holy war as he calls it is TOTALLY against the teachings of the Koran ,
just like most religions save a few around the world that have been manipulated by power hungry
persons wanting their own way either present day or in the past.

I am very happy to be in the country I am in thanks......

Please leave and go to the Islamic country of your choice if you would like to prove
your beliefs.....there are a lot more people you would get along with there I'd think!

By the way , I take it you are not female?

-Mark

That's interesting!!

The person you mention has harassed me many times over the last
several years. It started in about 1995 on Fidonet, then later continued
here on the internet.

His harassment included forging messages as me, forging a radio club name
that I am active in (even though no other hams in his area have any
knowledge
of the radio club HE claims!!), & he has harassed my elderly semi-retired
father at his place of work.

If there is anything I can do to assist your dealings with him, please let
me
know.

This is a updated message for help, I have a uniden pro-2023. I have a Bear cat 210XL also. I have placed the pro-2023 next to the BC210XL and I see where the Pro-2023 is recieving the freq's I put in, but I do not hear anything. It holds the Freq's real good and stops on every channel when there is a conversation as the BC210XL does, but it will not let you hear anything. all lights and knobs works for squelch etc. works good,,,I have looked for loose wires and solder joints, but see none out of place. Anyone has a suggestion or website I can go to for help??

Zodie

Not unless you want to just monitor one statio only out of several on the same frequency. That is like the local fire departments here the central dispatch calls up about 10 stations. Without the ctcss teh scanner will pick up all the calls for all stations. With the ctcss I would only hear calls for the one station and their mobile units I had the ctcss set up for.

# 1166. Re: What is a "discriminator output?"

Newsgroup: rec.radio.scanner
Date: 2001-10-28 17:44:41 UTC
From: null@gte.net
Message-ID: <3bdc440a.3572749@news.gte.net>
Source record: 58067
Cross-posted to: alt.radio.scanner,rec.radio.scanner

The discriminator is the circuit that demodulates the radio signal.
It converts an FM radio signal to audio.
That signal contains all sorts of stuff that is not needed or wanted
in audio so it is squelched, filtered and ran throught the volume
control then amplifed to drive the speaker.

Discriminator outputs generaly only have a buffer amp to drive what
ever you connect to it. Having such an output allows you to receive
the digital signals that are in compatable modes, like FSK paging and
trunking control channels. You will find that these outputs are fixed
in level and generaly are not squelched.

Ron

Do you get ANY indication of sound from the speaker? A little hiss, hum, faint click or pop, anything at all, with the volume at max??? If there's nothing, try an external speaker. If still nothing, try a gentle bounce, or a few knuckle taps in various places to see if it comes to life for a split second, which could indicate a broken wire, bad solder joint, hairline circuit crack, etc.. If that doesn't work, and you have no electronic skills and/or test equipment, find a repair shop..... Or - eBay, as is, needs repair (audio??).....

No, I'm not going to tell you simply because I was told in an email. I feel anything via email is private. If you want to know what the antennas used in the camparison were you should ask AntennaWarehouse.

I'm very very happy with mine. There is no antenna in the $54 price range which could come close when trying to receive the entire MilAir band. (TV antennas excluded because they need to be modifed for vertical mounting).

You're on the mark Glenn. If anyone even expects unity gain across the entire advertised spectrum they've got their head in a dark, damp, smelly place..... The old adage "you usually get what you pay for" also applies to most antennas, believe it, or not! I recently upgraded from a R/S discone, which has done a fair dinkum job for years ($60), to the AOR DA3000 ($130) and had them both in operation under identical conditions, using two radios, even swapping between the two, plus using the same antenna (s) for both radios with a Stridsberg multicoupler (also was wanting a good comparison of old Yupi vs. new AOR sensitivities with exactly the same input). And guess what??? Overall the AOR antenna works *noticeably* better!! Surprise!!! Not to mention the AOR is so much higher quality in it's physical construction, they're not even in the same league. Surprise!! Get up in the 800+ region and neither one will really blow your hat in the creek, as compared to a simple dedicated ground plane, plus you damn near need to spend as much on coax as the antenna then also, but that's another story....

BTW - I wish Antenna Warehouse would quit using moles for their b/s advertising, it's so transparent it's insulting. An occasional unsolicited plug, ok, but GMAFB..... (;->))

Cheers n beers y'all.

Hi,

I have a modified PRO-43 scanner from Radio Shack.
It seems that I cannot scan the 2.4ghz frequencies (ie. cordless phones).

I was wondering if there were any additional modifications that can be made
to
the scanner or perhaps using a different antenna to receive this band?
(I'm Currently using standard rubber antenna.)

Thanks,
Steve

# 1175. Re: Repairs for Realistic PRO-43 Handheld Scanner?

Source record: 58076

Mike,
Good luck the PRO 43 is a great scanner, showing it's age by being technologicly behind the times, but retaining it's superior front end image resistance. Keep in mind some parts IC's may be proprietary to GRE the manufacturer and unable to get. The LCD is also impossible to get anywhere. Might be best to retire it.

Lets see, I've had several different Discones (Radio Shack, Diamond (overpriced), and AntennaWarehouse) Beats all three for MilAir listening.

>
> You get what you paid for. A $30 TV antenna you pay $24 to have two
> holes drilled in it.

We went over this before, TV antennas are very hard to find in Daytona for less than $100.00. Before you mentioned HomeDepot, HomeDepot in Daytona does not sell TV antennas (other than indoor). RadioShack's cheapest outdoor TV antenna is $50.00, so I guess I only paid $4.00 to have the holes drilled.

You can't seem to handle that AntennaWarehouse has satisfied customers. But then by reviewing a few of your 6,480 posts to various newsgroups it appears that you simply love to stir up trouble.

For all who would like to see what others feel about Glenn.Hansen please check out http://groups.google.com/groups?q=%22glenn.hansen%22&hl=en&lr=&safe=off&site=groups this will pull up his posting history, not too flattering. First message at the top of the list "Glenn Hansen lies again.... Could be the end of this ... " then the second one "Glenn Hansen adds forgery to his growing list of crimes".

You seem to be acting as a shill for AntennaWarehouse George. He is
selling a product to the public but you aren't going to repeat the
beams he claims to have used in comparison because he E-mailed them to
you. You know very well he refused on here and you claim is just BS
and smoke. You related or is he offering you a good deal to front for
his lies?

> I'm very very happy with mine. There is no antenna in the $54 price range which

How do you know George? What antennas have YOU compared it to?

Glad you are happy, nobody disputed that. Too bad you support a
company that makes outrageous claims yet refuses to back them up.
Typical preying on the uninformed with lies and deception.

You get what you paid for. A $30 TV antenna you pay $24 to have two
holes drilled in it.

Source record: 58086

I'm new to this too - Just bought a Pro 94 on sale today. I didn't have a clue... manual was confusing at first, but it started to make sense after a few minutes. I was a bit confused about how to program in my local freq's. I could make it scan the built in ranges, but that took forever... (I don't need most of them for my area).
I finally started pressing PROG and entering in the local freq's I've gotten from a list off the internet for my area.
It's not scanning only the ones I put in. = ) probably about 80 of them. (so far)

I have a lot to learn, but I love learning, which is why I got one in the first place. I entered in the local airport freq's in one of sets (1-50 set) and I'd like to figure out how to make it scan Only that set of freqs (the ones programmed into 1-50)

There are 10 ranges of 50 banks? I put airport in 1, fire in 2, business's in 3 and 4 and police in bank 5.
So I can tell what cataogy is talking when I see what bank it's on.

But at times I think I'll want to scan only police in bank 5 or only the airport in bank 1...
I figure that out eventually.

But I'm a computer wiz and logical/tech stuff comes really easy for me - while being slightly puzzled at first, I thought... there is no way the average Joe is gonna figure this out... you know the guy that can't program his VCR ;-)

## 1189. Any sites to identify freqs?

From: aclassiquepair@hotmail.com
Message-ID: <e34cb5a0.0110281707.1f0f1a74@posting.google.com>
Source record: 58090

Are there any online sites where one can enter a frequency, and find out what that freq. is used for? I've seen similar sites for AM stations, FM stations, etc. "Police Call" has something like that, but the list is incomplete.

Thanks
CP

I did, didn't like the 92. The reception on the trunked 800 range was lousy. There is a lot of things I like about my 245 over the 92. But wait I got a new 93 last week and Im thinking about getting rid of my 245. The 92 went back to the store before the 90 days were up.

# 1192. Re: Scanner Crystal Question

The two receivers use different IF frequencies. One is 10.7 MHz, the other is 10.8 MHz. So the radios will receive at the wrong freq. if the wrong crstal is plugged in.

Physically, how does one tell the difference? If they are not marked, I don't know. You could try using freq counter to see what freq the crstal oscillates at. Or, depending on your time and patience, use another receiver to try and pick up the crstal freauency.

Not much help, I'm sure

Just got a Pro 94 - ON SALE (got it today) was 249.00 - on sale for
149.00 - so I got it.
Was confusing at first, but I now have about 80-100 freqs and still finding
more to add...

My biggest problem with it so far is, I want to stop it and go to a bank so
I can add more
to that bank, or edit a freq in a bank. Not sure how to get to it. But I
haven't had much time
with it yet.

I have no idea what Trunking is yet.... or if I even want to listen to those
types of freqs?
What tips can you share? (sites to learn from?) so that I can make the most
out of my Pro 94?

Ron in Grand Rapids, MI

I have been away from scanning for about 4 years now, and am starting to get interested again. I was wondering if there was an FAQ on the web or somewhere I could go to catch up on what I've been missing. Back when I was into it trunking systems were just starting to come onto the scene, and (as a high school freshman) it was fun to listen to people talk on their analog cell phones and 46/49 cordless phones. My interests have changed from snooping to military and space communication. I would just like to be directed to someplace where I can get up to speed. Thanks for your help.

Sending in any recordings you have would most likely result in the stuff mentioned below. Something like this just happened in DC not too long ago but it involved the MDTs in police cars, IIRC, which are not monitorable by private citizens. Someone found out about people using bad language and racial slurs over the terminals and that launched a massive investigation.

# 1201. Pro 94 - HELP! crash course in trunking?

Newsgroup: rec.radio.scanner
Date: 2001-10-29 03:25:45 UTC
From: Ron <rojoyinc@home.com>
Message-ID: <Z_3D7.206634$K6.101694365@news2>
Source record: 57953

I got a Pro 94 today, I've added many freqs in my area... was listening to it tonight while reading the manual. I have to say - it sounds like I'm missing out on a lot of features. But I'm totally lost. What is the benifet of a trunking scanner like this?

It talks in the manual about scanning and ID's and pushing buttons on the Pro94 - that totally makes no sense to me. Is this needed? I seem to be hearing both sides of the conversations that I'm hearing on my presently programmed freq's. Who is using trunking radio systems? why do I want to hear them? the manual said something about "finding the main ID is half the fun" I'm all for having fun, but what the heck is it talking about.

# 1203. GeorgeF - Shill or Tim of AntennaWarehouse?? ---- Re: Antenna Question?

Newsgroup: rec.radio.scanner
Date: 2001-10-29 03:28:31 UTC
From: Glenn <glenn.hansen@usa.net>
Message-ID: <MPG.16466c9f4f63ddf9896a8@news.harbornet.com>
Source record: 57948

I see George the AntennaWarehouse shill has deleted the main part of the message. Why is that George? Why do you not want to discuss your AntennWarehouse and their claims? Why do you refuse to disclose the antennas Tim says he compared them to? You wouldn't have clipped it if you weren't being as deceptive as Tim at AntennaWarehouse.

In article <3BDC9EA8.3302222@licensed4fun.com>,
av8tor@licensed4fun.com says...
>
>
> Glenn wrote:
>
> >
> > How do you know George? What antennas have YOU compared it to?
> >
>
> Lets see, I've had several different Discones (Radio Shack, Diamond (overpriced), and
> AntennaWarehouse) Beats all three for MilAir listening.

Let's see.....not a single beam in the bunch. You claims are just as deceptive as AntennaWarehouse George. You compared a discone to a beam. Was it a AntennaWarehouse 7db gain discone? What is the gain of the beam. You don't know do you?

> > You get what you paid for. A $30 TV antenna you pay $24 to have two
> > holes drilled in it.
>
> We went over this before, TV antennas are very hard to find in Daytona for less than
> $100.00. Before you mentioned HomeDepot, HomeDepot in Daytona does not sell TV
> antennas (other than indoor). RadioShack's cheapest outdoor TV antenna is $50.00, so
> I guess I only paid $4.00 to have the holes drilled.

Excuses, and quite poor. You can order a TV antenna over the Internet for the price I quote. say Dayton has no TV antennas but you mail ordered a TV antenna from AntennaWarehouse. Your logic is not getting any better. You can mail order a $30 TV antenna on the Internet. Excuses George.

> You can't seem to handle that AntennaWarehouse has satisfied customers.

No, I can't handle two-faced people George. AntennaWarehouse makes the claim on here and won't back it up. You claim you have the info and make phony excuses why you can't post the name of antennas. What a phony. If it wasn't a lie they would have been posted by Tim and AntennaWarehouse. Just like a discone with 7db gain. Lies.

How is that stirring up trouble George? It isn't, you just can't handle that you might also to have been duped by Tim and his phony claims. I'm not the only one on here with that opinion George.

> But then by
> reviewing a few of your 6,480 posts to various newsgroups it appears that you simply
> love to stir up trouble.

So asking what are these beams costing many times more than AntennaWarehouse claims to have tested is stirring trouble, ehh George. You can't stick to the facts so start the flames and innuendos, ehh George? Is this Tim using another account or just another shill? Another diversion because George is either a liar or embarrassed he got duped by AntennaWarehouse.

> For all who would like to see what others feel about Glenn.Hansen please check out
> http://groups.google.com/groups?q=%22glenn.hansen%22&hl=en&lr=&safe=off&site=groups
> this will pull up his posting history, not too flattering. First message at the top of
> the list "Glenn Hansen lies again.... Could be the end of this ... " then the second
> one "Glenn Hansen adds forgery to his growing list of crimes".

Anybody can make claims. Many like you can't back them up. what did Tim offer you George? Now when we do a google search we all know George is a shill because a search engine found a post saying so. Right George? Even though you seem to be, google doesn't lie, right?

>BTW, who you calling "studip"?

Both McViegh,and the Suicidal high jackers, are STUPID,and DUMB.
Suicidal highjackers are double murderers,they are STUPID to murder
others,and even DUMBER to murder themselves.
McVeigh was not brave,just smart enough not to kill himself,but STUPID
and DUMB enough to kill others.The Suicidal high jackers were just as
STUPID and DUMB as McVeigh,Plus they had the extra ounce of STUPIDITY
to kill themselves also.
The real sad part of all of these fools,was that they thought God
was on their side.Talk about delusional.

The phones are digital up there anyway, as far as I know, so you wouldn't
hear anything but an annoying buzzing type noise. And a 43 won't go up
that high anyway.

BDK

Go to www.radioshack.com and click on "product manuals". Then click on "communications", then click on "scanners". Scroll down to the line for PRO-42, then click on the number to the right in red (200-0302). That will give you all the information you want. Just select from the menu.

If your life is so meaningful, then go find something better to do than respond to me. You won't of course since the only thing your famous for is being a world class jerk and troublemaker. You and that other whiner must be quite happy growing your balls together or whatever useless people like you do.

## 1215. FS: Yaesu VR-500

Newsgroup: rec.radio.scanner
Date: 2001-10-29 13:53:40 UTC
From: Garr <garr_1099@hotmail.com>
Message-ID: <3bdd5f65@rpc1284.daytonoh.ncr.com>
Source record: 57966
Cross-posted to: rec.radio.amateur.equipment,rec.radio.scanner,rec.radio.swap

I have a mint condition Yaesu VR-500. No scratches on display or radio.
Comes with all standard accessories. Also have the Yaesu FNB-59 Nicad pack
made for this radio. This is a US model.

$185.00 shipped and insured. USPS Money Orders accepted.

Email if interested

# 1216. Re: No audio (Pro-2023)

You do have a strange one! If it's stopping on known freq's, same as your other scanner, then a major portion of the RF and PLL section would appear to be working, and if you hear squelch noise, with the squelch opening/closing normally via the control, the audio and at least some of the IF's are probably working. Anyhow IMHO, it's past the shade tree technician stage and probably in need of someone with test equipment and a schematic, if it's worth sinking some $$ into - I'm not familiar with the 2023... Or eBay - I'm convinced you could list a box of used Kleenex and get a bid (just so they weren't used by someone talking on a cell phone :->).....
Cheers n beers Y'all...

Decent one's do, indecent one's don't..... (;->))

Most of the "hybred" comm receiver/scanners have one, but = $$$+ (AOR, Icom, Yaesu, etc.), and a lot of existing models have mod's done by third party shops, when possible/practical. You can order a Yupiteru MVT5000 from across the pond (the name eludes me at the moment) with a disc mod for ~$600, for example.....

thanks for the reply, I have little interest in State police, I like hearing
the local things best.
Even though I may not have a reason for trunking, how does the radio do it?
Does it inform me that what it picked up is a trunked system?
Who uses trunk systems?
If you have picked up a trunk transmission, do you then tell the radio by
pushing the proper buttons
then does it 'scan the info data and auto save the freqs?

>I would advise you to keep your recordings to yourself.

Of course! However, if there is something in them (such as was the
case in the famous "Pentagon Papers") in which the concerns raised
over-ride the "law" I'd send it anonymously to an appropriate media
outlet.

The litmus test I'd use is this: "Is this a recording of something
critically important enough to change a government?" If it is, then
it is worth publishing. For example, if it contains a brutally frank
case of governmental power abuse, then it's worth revealing to the
outside world. If it's just the police chief calling the mayor silly
names, it's good for a chuckle now and then, but it's nothing worthy
of publishing...

In the end, what I'm describing is called civil disobedience, and it
should not be done lightly. I make no bones about it, I've never
encountered a situation like this, and I hope I never will. This is a
terrible choice to have to make and I don't wish it on anybody.

Turning is flawless setting side by side with 245& 91 it rates up there with my 780 the trouncing on the 92 was bad. The alpha tags makes it easier on large systems. I like the way the 93 stores channels, banks & sub banks its more like the 245 than the 92 .
The 245 is a great radio the 93 has the edge with the alpha tags and the 92 is probably a good radio I might of gotten hold of a lemon but I've read where im not the only one.

Radio broadcasts could not have been intended to fall under the
interstate commerce clause because radios did not exist when it was
drafted. The same is true of many matters which are considered to be
within interstate commerce, but that makes them no less within the
scope of that clause.

The scope of the interstate commerce clause was a real point of contention in the last century, and the Supreme Court essentially decided that a given act does not *itself* have to involve interstate commerce as long as such acts - in the aggregate - have an *effect* on interstate commerce...and Congress gets to decide whether a particular type of act affects interstate commerce. In recent years the Supreme Court has shown an inclination to flex some muscle on this issue, but for the most part Congress can still do almost anything it wants under that clause.

As to radio broadcasts, I can't imagine how they could *not* affect commerce under the present test.

Personally, I think a blanket ban on scanners is a violation of the First Amendment (which is a separate issue from the question of federal authority under the commerce clause). I recall a (dissimilar) case from law school in which the Supreme Court held that the right of free expression includes the right to receive the expressions of others. Of course, the government can infringe on a fundamental right

(such as free speech) to the extent that the infringement is narrowly tailored to advance a compelling government interest (such as the apprehension of fleeing criminals), but a blanket prohibition on scanners is *not* narrowly tailored to that end.

Hello there,

Are there in this newsgroup users of the PRO 2002 (realistic / Radioshack) ?

And if so, do you have an american version of the 2002.

i'm an owner of a europe version, this one doesn't have an AM band in the 30 and 40 MHz freq. range.

I think it must be possible to make a small modification so that it is possible for me to use this band.

Let me know what your experience is!

Peter.

> >To classify radio broadcasts in general (and especially ham radio
> >operations) as an 'interstate commerce matter' is kind of a stretch
> >IMO.

Free clue: Radio signals don't fall on the ground at the state line.

If access to the spectrum were unmanaged, then given the finite nature of the spectrum, it would be quickly rendered unusable.

The FCC also mandates standards, which prevents things like NBC putting out their hit new show in a special video format that you have to buy an NBC TV set to receive. It keeps me from running my 1500W radio on your TV frequency (or air traffic control frequency). If you tried to establish these things at the state level, you'd have chaos.

Driver's licencing and regulations are a microcosm of what might happen. Some states have right on red after stop, some have left into one way after stop, others don't, and there's a lot more relativley trivial variants. In San Francisco, you get ticketed if you park with your wheels pointed the wrong way. (and yes, it makes sense)

The reason that we don't have utter chaos in driver's licencing, is that there is overriding federal mandates on things like basic competency, widths of roads, marking and signal standards.. All the issues that don't stop at the border.

Imagine the fun if Missouri decided to make lanes only 9' wide! (look at a map, and note highways.)

Originally, they cahrged a premium for credit card transactions, but the credit card compaines insisted (as in you loose your merchant account if you don't comply) that they not do so.. So, they came up with the discount for cash.

Great example of the fact that all the costs that the merchant bears, including theft, end up coming out of your pocket.

Most stuff in this band here in Canada is generally in fm mode, not used much up here. In the U.S. however it is considered the business band, military, fire, police etc.

Nothing much for AM Use here in that band. 108-136 is our general air band in AM Mode.

It is an output of the receiver's mixer(s) before it hits the audio stage.
The scanner will rx FM, SCA, RTTY, WEFAX, etc. BUT it is all filtered out
in the audio stages, thus you can't hook a computer up to the earphone jack
to decode SCA. (there are some things that you can hook up to earphone jack.

I am considering updating my scanning gear.

I would be interested in feedback from folks who have used the BC780XLT and the WinRadio 1500e, especially those who have compared the two. It appears that while more expensive, the WinRadio has more potential for growth / expansion.

I read the early reviews of the1000 WinRadio and it appeared to have a number of technical shortcomings when compared to other scanners / receivers. That may well have changed in the intervening years. If anyone can point me to a more recent review of the 1500, that would be appreciated.

I am interested in comments on sensitivity, selectivity and intermod rejection, etc. I would normally use the unit for VHF/UHF rather than HF, since my ham gear adequately covers the latter.

Thanks in advance.

Although I do not have the WINradio, I do have the 780xlt and a
PCR1000...
After using both units, the 780 seems to be superior in most respects.
I have read reviews of the WINRADIO
in PASSPORT TO WORLDBAND RADIO, and other magazines. I believe the 780
for UHF/VHF scanning to be one of the best
out there... Chris..

>Radio Shack is selling for $250? .....No Thanks.

Watered down? in some ways yes, in other ways MUCH better.

Example#1 to listen to a motorola trunked system type II enter only
the data frequency, mode, etc. and scan away.

Example#2 IMHO the reception (in Salt Lake, Utah, USA) is better on
the pro-93 than the 92 or the 94.

I am sure there are others, but I have VERY limited experience with
the 94 and great experience with the 93

YMMV of course!

Can anyone suggest a make/model/source of telescoping whip/BNC for the VR-500 for decent reception at the SW and MW freqs. I understand that the stock antenna is pretty poor at those freqs. Several reviews suggest such an antenna, but no more details than that.

I am very new at wideband/scanning.

Thank you
Russ

The $9.95 Radio Shack 20-006 model works well, especially considering the cost. It is a center-loaded whip that is put together reasonably well. You might also consider the 28 ft. wind-up long wire antennas for SW listening. Sangean ANT-60 is one example, and Radio Shack might also sell one. I think they are in the $10 to $15 range.

Hi.....

As the owner who has tried receiving Weather data via WinSat through
my AOR8200 through PC with top range Soundblaster sound card with no
sucess, could it be that my AOR doesnt have this discriminator output?

thanks for any advice.

Regards, Callum.

The AOR8200 has a discriminator output, but it is not accessible through the earphone jack. The discriminator output is available from the accessory jack next to the power jack. This is described in the manual. You can purchase a plug and cable which fits this jack and which terminates in wire ends so that you can attach a plug of your choice to the appropriate discriminator leads.

Hi
I have a mint condition ( absolute mint-unmarked-as new) Pro-2042.
this radio has only been used for about 15mins (to check, when it arrived)
It is unblocked Canadian version 25-520Mhz---760-1300Mhz--1000 channels
I would like to swap it for a GOOD general coverage receiver or a handheld
scanner with ssb
thanks
RGM

Money IS the root of all evil! Unfortunately what many fail to realize is journalism is a BUSINESS!! Their goal is unmistakably to make MONEY, NOT to inform. In tough times like this they need to report stories that will cause great attention(viewers).

So yes . . . the media is milking us left and right. Using and abusing us. In this time of terror we must NOT rely or trust the media. TRUST your scanners!! Trust your intelligence to realize that Anthrax is NOT breaking news anymore unless there is a new AND significant development like . . . say . .. 100 people test positive for inhalation Anthrax, or 50 people are dead as a result of Anthrax, or Anthrax found in sealed unopened Medicines or foods. THAT would be breaking news, not that ANOTHER person has it AGAIN! We don't need to know about EVERY case of EXPOSURE as a TOP story. Please report away, but don't report about it as BIG news when it is not anymore. Do we get breaking news for new bodies found at WTC? No, but they DO report it APPROPRIATELY.

The news' style of reporting Anthrax today, is the same as reporting every case of food poisoning or the flu as a TOP story(BREAKING NEWS). It's all about MONEY, MONEY, MONEY!! Let's wake up and think for ourselves. Let's do our OWN homework!

The News . . . yet another necessary evil!

# 1272. 780xlt too much for a first scanner?

Newsgroup: rec.radio.scanner
Date: 2001-10-30 21:38:10 UTC
From: scholiast@hotmail.com
Message-ID: <aae46dc5.0110301338.b724339@posting.google.com>
Source record: 57923

After reading through reviews and catalogs, I'm leaning towards getting a 780xlt as my first scanner. I live in an area where the trunktracking would be useful, and I'm enamored of many of the 780's features.

My question, given that price isn't the primary decision point, is whether or not the 780xlt will simply be too much scanner for someone new to the hobby? I'm very technical, so I believe I could learn and understand the feature set; I just wonder if the flexibility of the 780 will be so great that it will be hard to focus my listening.

Any thoughts?

Any idea whether I will get reasonable reception with the supplied antenna (I live in a house in a dense urban area)?

Thanks!

It sounds like the cheaper way to go to me. I had the same decision to
make not long ago and I think I would have spent more if I had bought a
scanner that might be more appropriate for a beginner and then upgraded
(and I would have upgraded at least once by now I'm sure). Just because
the 780 has a lot of fancy features nothing says you have to use them at
first but I'll bet you'll grow into them quickly.

Perhaps I could answer.

Yes my unit was supplied with a 3v lithium-ion internal rechargeable battery
that lasts a full day or more in non-video mode.
Expect less than 2 hours use while watching TV etc. from the internal
battery, however it can easily be supplied with an external source i.e. AC
mains or 12vdc adaptor.

Probably one of the most "feature" filled scanners available today

>

It is as flexible as you want it to be,
IOW: you can scan multiple trunked and conventional systems at a time or
just set it to one single freq or talk group, if you like.

>
>
> Any thoughts?

I like mine.

>
>
> Any idea whether I will get reasonable reception with the supplied

Dense urban = lots of targets,
and the triple conversion receiver will help to reduce interference from
strong signal paging stations.

Good reply,
couple questions here;
1 - URL for a good SCA decoder app?
2 - Would the discriminator output be preferred to the data slicer output for
such apps like mdtmon?

>to decode SCA. (there are some things that you can hook up to earphone jack.

Can trunk tracking be done with just the earphone jack?

I have loaded trunker onto a lap top, alas I have no scanner of a
portable nature which has a discriminator, and looking at the Icom R2
I am not sure I want to play with the overpacked SMC nightmare.

Thanks!

I have used several search engines and found myself unable to find the
discriminator output information for a bearcat sc150.

Would anyone happen to have this information, and be willing to share
it with me?

Thanks!

I just bought a Pro 91 scanner. I live in Decatur, Illinois and I found the frequencies for the Motorola Type II system on the internet. I've entered all nine of them, but they just repeatedly scan without ever locking in on anything. As I understand it, the trunked systems use a data channel. Am I missing this? Is there a reason I can't receive anything? I'm really new to this type of scanning, so any help would be greatly appreciated.
thanks, Jim

Geez, where do I start? Yes, journalism is a business, but only for the owners of the business -- the stockholders. The people who actually do journalism -- you know, the reporters -- get paid the same week in and week out. And I assure you that their goal is to inform; no bonuses are suddenly paid when circulation or viewership jumps. And there is no need to "report stories that will cause great attention" in time like these; CNN could run a test pattern and people would watch it if they thought that they'd be informed QUICKLY when new developments DID occur.

Trust your scanners?? I enjoy scanning with my Pro-43, and I and many other reporters have used scanners as leads to good stories. But it's nuts to think you can rely on the snippets that come in from your local scanner freqs to inform you about what's happening across your community, much less the larger world. Maybe you would learn a few more things if you spent 18 hours a day listening and logging, but then you'd also be one of those pathetic souls who have no other life.

Instead, here's some advice: Realize that reporters have only a slightly better view of the situation than you do. Read their reports or watch their broadcasts with attention and skepticism. Balance what today's story says against other stories in other news media. I'm a print guy, so I'd argue against watching the 24/7 news channels constantly because they're repetitive, often wrong, and too reliant on talking heads to fill time when nothing new has happened -- except that I also watch them just to see if any news is breaking. But at least I can watch a breathless "this just in!" report and think "Nothing new here." So develop the same ability to evaluate, and you'll be a lot happier -- and better informed.

Steve Doig

PS. No, I'm not interested in fighting a flame war about reporters' motivations and such. I've said my piece, so I'll now butt out.

data channel sounds like computer noise. if you don't hear this, you are missing the data channel. Don't forget to program a fleet map (i used a preset map in the manual). My new Pro-93 requires that you only program the data channel(s), program the fleet map, program the user ID. This new scanner finds all 'vioce frequencies' used in the system for me.

Let's think a little simpler. No need to talk about bonuses. I doubt anybody is getting any bonuses in this time when the economy is so bad. I think the objective is the same for journalist as it is for anybody else who has a family to feed or resposibilities . . . to keep your job. There's nothing wrong with that, it's just that people need to be aware of this. Trust me . .. if CNN started to significantly loose ratings, they would end up firing workers like any other company. I dare CNN to not report anything about the war and expect to stay in business. Your statement does'nt really hold any weight in any situation. You think ANY business REALLY "cares" about anything but profit? In any succesful business it is NOT only the investors that care about the success of the bussiness. If not bonuses the success of the business means you keep your job.

> And there is no need
> to "report stories that will cause great attention" in time like these;
> CNN could run a test pattern and people would watch it if they thought
> that they'd be informed QUICKLY when new developments DID occur.

I strongly doubt that. If FOX is showing "Anthrax Threat in White House", and CNN is showing color bars . .. I think majority will turn to FOX. Man is VERY impatient. They will feed of just about anything they can get their jaws on. They would rather watch bogus(not to them) Anthrax stories than WAIT(?).

> Trust your scanners?? I enjoy scanning with my Pro-43, and I and many

> also be one of those pathetic souls who have no other life.

I do spend 18 hours a day listening and logging. Guess what? I have a MUCH better picture on what's going on than from the news alone. While the news reports every new case of Anthrax, I am being informed about more important developments like the theft of a Pilot's uniform and keys to a cockpit. A runaway at a border check, and other suspected terrorist activities. I have

heard nothing about this on the news(CNN/NY1/ABC/NBC), which I watch for 6-8 hours a day while scanning. There are many things that the governent does not want the public to know for fear of panic, that's why good scanning is invaluable. As far as worldwide issues? Well there you have a point. My scanner can't pickup beyond my state, for that I watch the news. So unfortunatly for world news I have to rely on an untrustworthy and often inadequate source source . . . the MEDIA! :(

> Instead, here's some advice: Realize that reporters have only a slightly
> better view of the situation than you do.

It would seem the reverse is true(locally anyway). If I'm wrong about this, then that means I was right about them being somewhat uninformed. Why else would they not report major NEW developments in the WTC investigation? They report about Anthrax because that's all they have, or somebody(I wonder who) is controlling what they tell the public.

>Read their reports or watch
> their broadcasts with attention and skepticism.

I already do. The NEWS for me is simply a guide. It's like the summery on the back cover of a book; it gives you an IDEA about the story, but to really know the story you have to read the book. Well I read the books! The only thing I can rely on them for is to release abvious and unavoidable news like the 2 planes flew into the WTC, or America is going to war. For the real details I have to read. My scanner provides me with a fraction of my intelligence gathering. I also rely on many other sources from digital to print to direct sources. That's why I know things like what the Port Authority was up to on September 11th, not to mention how many people were killed on 9-11 as a result of neglegence if "nameless" people. There are so many things about 9-11 that the MEDIA has not even mentioned. Don't even mention the flight with the "heroes' on board. That's a whole nother "story".

> Balance what today's
> story says against other stories in other news media. I'm a print guy,

Yep.

>often wrong, a

Yep

>nd too reliant on talking heads to
> fill time when nothing new has happened

YEP!

>-- except that I also watch them
> just to see if any news is breaking.

Yeah, let's see . . . "A man in New York tested positive for Anthrax exposure . . . AGAIN".

> But at least I can watch a
> breathless "this just in!" report and think "Nothing new here." So
> develop the same ability to evaluate, and you'll be a lot happier

I got bigger things to worry about than the MEDIA. I have many more reliable sources. It's the public I'm worried about. They don't all have access to the information I do. Thier lives are at risk because they think the news is GOD! It's them I'm worried about. When they report inacuratly they risk lives. Unfortunatly many don't realize this.

>-- and
> better informed.

I admit I don't have the security clearance I used to, but I'm happy with my Intelligence. I have a good gauge on what's going on.

> PS. No, I'm not interested in fighting a flame war about reporters'
> motivations and such. I've said my piece, so I'll now butt out.

Neither am I. Flame wars should be reserved for debatable "opinions". I would waste my time writing all this for an "opinion". The information I have given is all verifiable to those who REALLY want TRUTH!

Source record: 57859

If the frequencies are "active" you should hear some activity on them.
If you hear nothing, then the frequencies are either out of range, not
active, inaccurate, or the scanner isn't working.

Walt

Okay... to start, I've had numerous BC245XLT's in the past - I've been monitoring the same local EDACS system for a few years now. I just got a new 245XLT and for some reason this one has problems with one of the ten frequencies used in the system. I came to this conclusion after I noticed that 95% of all signals came in crystal clear, as they should...I'm only about 3 miles from their 300 ft. tower, and a few transmissions were so weak they came in as almost all static and I could actually hear the EDACS 'end-of-transmission' beeps at the end...though very scratchy!
I hit the DATA button so that the dots on the top of the 245XLT's display would show which frequency the transmissions were coming in on - and I concluded that only transmissions that were coming in on the freq. right next to the control (a.k.a. data) channel were having this problem. This problem doesn't seem to be affected much by location of the scanner... I have the same problem in my car, though not nearly as bad.
I have had the same model scanner in the same place in my office around the same electronic equipment - no problems before.
I'm thinking my BC245XLT is defective. Any suggestions??? This problem is extremely annoying.

Thanks
-Justin

I didn't hear any action on the UHF Mil freqs that were used when Bush visited Ground Zero a few weeks ago.

I did hear activity on NYPD freq 470.6375 when Bush was on the ground last night. Heard "Thunder Pilot," "Thunder 5," and reference to "Cyclone." Also reports as each "check point" was cleared.

BTW, What are the code names used for current administration (e.g., Bush, Cheney, etc.).

Cross-posted to: rec.radio.scanner,alt.radio.scanner

Is it possible to connect a scanner's sound output directly to a desktop voice activated cassette recorder, without putting the earphone from the scanner over the microphone of the cassette recorder? If so, then how can this be done? It would be nice to be able to do this, in order to cut out room noise and possibly improve the sound quality of the recording of what the scanner picked up. If a voice activated recorder has AUX and Remote jacks, which one (if any) do you plug the earphone output from the scanner into?

Thanks in advance,

Ian Douglas

Well, if you have a broadband connection, I could email it to you... It's not really that big, just over 1Mb I believe... I can't, however, send it to a Hotmail account, etc., as the allocated space is not enough to receive such a file... I searched forever for the damn file, and finally found it (the better one, version 2). Don't recall where I got it, though, so it would be easiest if I just sent it to you...

If all else fails, I'll see if I can get it up on my website, and you can download it there...

Let me know what you think, and how you might want to go about making the trade... IF you want to search for it online first, look for "VoiceInvert", or VoiceInvert2". The original, though supposedly not as good, is just called "Invert".

Good luck, and get back to me if you can't find it online...

Power House

The parabolic is probably for the T1 coming to the site. Every
cell site has to be connected with the telephone network.
Though it isusually done with buried cable pairs.

There is a set of antennas for each sector. Generally there are
3 sectors pointing at 0, 120, 240 degrees. Although this will
change as needed. The second antenna on each sector is
for diversity. You will gain about 3 dB on receive, from the
cell phone, with this diversity antenna. This is if you have
only one carrier (frequency) If you reach maximum capacity
for the 1st carrier then you must add a 2nd. Then they make the
diversity antenna a TX antenna just like the first one. If you
go to a 3rd carrier then you must add a third antenna.
This is how Sprint CDMA does it.

## 1323. Digital Scanner

Newsgroup: rec.radio.scanner
Date: 2001-10-31 19:06:47 UTC
From: Russ Freeman <kf4zfs@hotmail.com>
Message-ID: <bZXD7.91070$WW.5095552@bgtnsc05-news.ops.worldnet.att.net>
Source record: 57874

There has been quite a bit of rumor and inuendo regarding Uniden's
digital scanner presently under development. Here's the scoop directly from
Uniden.
Russ

From: "Ainsworth, Jennifer" <JAinsworth@u...>
To: 'Russ Freeman' <kf4zfs@h...>
Subject: RE: Digital Scanner
Date: Mon, 29 Oct 2001 15:52:26 -0600

Mr. Freeman -

Thank you for your inquiry regarding our APCO 25 digital scanner
model.
Below is our official statement regarding this issue. Please feel
free to
contact me if you have any additional questions or concerns.

Jennifer Ainsworth
Media & Trade Show Manager
Uniden America Corporation
4700 Amon Carter Blvd.
Fort Worth, TX 76155
P: 817-858-2900
F: 817-858-3228
jainsworth@u...
www.uniden.com

Uniden America Corporation is now developing an APCO 25 digital
scanner model, which is slated for distribution in the fourth
quarter of
2002. To date, and contrary to industry rumor, Uniden has received
no
requests from the FCC or any federal, state, or local authority
asking the
company to delay or halt development of this or any other Uniden
product.

It is important that the public understand the nature of APCO 25
scanner technology, which allows users to pick up ordinary digital
signals
such as those now used by police and emergency officials in a few
large US
cities including, for example, Los Angeles. Scanners such as the
APCO 25
model in development by Uniden do not facilitate the decoding of any

encrypted transmissions including transmissions by national security
and
law
enforcement authorities such as the CIA, DEA and U.S. Special Forces
Units.

Uniden at this time does not anticipate receiving any requests to
alter its
product-development schedule on any APCO 25 digital scanner units.

-----Original Message-----
From: Russ Freeman [mailto:kf4zfs@h...]
Sent: Wednesday, October 24, 2001 10:23 AM
To: unidenpr@u...
Subject: Digital Scanner

There is a great deal of talk in the recerational scanning community
that
the FCC has requested that Uniden curtail development of the new APCO-
25
compliant digital scanner. This is supposedly out of "security
concerns"
related to the events of Sep. 11th. Was Uniden even developing such a
device
and is there any truth to truth to these claims?

It is the same as the GRE of which I have one. If you are trying to amplify a "rubber duck" antenna they work nicly. However if you want to use one to amplify an outdoor antenna they will overload and amplify noise. The problem with using one to amplify an outdoor antenna is that they are at the wrong end of the coax. To amplify an ourdoor ant you want to put the amp at the antenna.

Co-location is quite common. For example about 500 meters from me is
a tower, it is both Voice Stream GSM-1900 and Nextel Iden. Don't know
about the Nextel equipment, but Voice Stream has a T1 coming in, and a
microwave antenna (parabolic) for traffic for next tower so it
doesn't need a landline link.

# 1327. Serial Interface Question

Newsgroup: rec.radio.scanner

Hi,

I'm working on some logging software that interfaces with a scanner and was wondering if anyone knows how many different serial protocols exist and what they're all called.

I currently only know of the ICOM protocol called CI-V (I think it was).

Could someone help me out and give me some more protocol names (and the brand-name associated with the protocol) that I can then go research to see if it'll be possible to include more of the formats into the same software.

What I hope to accomplish is to make it possible for this logging software to ask the scanner what the current frequency (and maybe memory channel, etc.) is being used at a giving point in time when the software detects some incoming sound from the scanner.

Thanks a great deal for your inputs!

Dave

Do you have a cite for the case? I didn't find it in my search.

>The law is narrowly tailored not
>to ban *scanners* it only ban radios from receiving frequencies that are
>assigned for police purposes in motor vehicles.

I don't see how that qualifies as narrowly tailored to advance a
compelling government interest. After all, a reporter (or just a
curious citizen) could use a scanner in a vehicle to learn of breaking
news. Preventing that doesn't advance any compelling government
interest I can think of.

If you are using a hand held scanner, your options a very limited...
Basically you will probably have to stick with what you are doing now...

If you are using a base or a base/mobile scanner, most of them have a line out jack that you can hook to your recorder. For instance, my BC895 has a LINE jack on the front, and a AUX jack on the back. You hook up the LINE jack to the LINE IN or MIC jack, and the AUX jack on the back to the REMOTE jack on the tape recorder. Then on the scanner, you set which channel you want to record, and every time there is a received transmission on that particular channel, the scanner activates the recorder.

>

An excellent description of the modern cell site. I wanted to add one other reason for multiple antennas on the tower. Many cell sites are adding digital services to their old Analog services. I believe many of these services are around 1700 MHz which requires another set of transmitters and antennas.

Message-ID: <oap1ut4grteqhpemqv0bv1fa06jg3oabr9@4ax.com>
Source record: 57896

The Nice thing about the 780 is download Uniden's Smartscanner.exe program,get a serial port cable,and using,your zip code,and your computers modem.And Undiden will program the radio for you And You can be trunk scanning on day 1.The TrunkStar780 program is well worth the money,as it allows a user to enter Bank Names Frequencies,Trunktypes,Fleetmaps,TalkGroup,etc into a spread sheet type program,and then let Trunkstar780 program the scanner for you.I've fround the audio digital logger part of the Trunckstar780 program too frustrating,so I use the free ScanRecord program http://www.davee.com/ that take the scanner's tape out line,and feed's it into the sound card of my computer ,where using compression hundreds of hours of conversations can be captured.The audio is played back using Windows
Media Player.With FM and squelch this program records only when triggered by a conversation.So if there is a frequency,or talkgroup that's got you stumped,record only it for a few days,and you will probably figure it out,when listening to the playback.
I don't think you can go wrong with the 780,but you could grow to be and old man,try to program 500 channels,each with many setting,by pressing buttons,software programing is the only sane way to go.

well if you are bound and determined to reinvent the wheel , or as my
daddy used to say , " why plow rows others have already hoe'd " ....

fire up a demo copy of scancat on your laptop ( and /or VR4 etc ) and
connect the serial cable to your tabletop computer ( or any two
computers serial to serial ( I take it you know how to reverse the
commo lines ) .. and them fire up a copy of CI-V TEST ver 1.3
etc ... ( http://www.plicht.com or I'll post if on alt.binaries.
radio-scanner if you don't already have it )

then , in any of the better programs ... fire up each different
model they list on the setup menu. You will instantly get the
initialization , 00h addy , and etc .... for every model they
offer service for. ( which for scancat is about everything
ever made ..VR4 will pick up the difference )
Scancat alone has 50 or more radios listed. They
have already done all the work ..use their effort
and don't waste your own time and trouble.

I was picking up ABL also. I heard several referances to "Thunder Pilot". I was surprised not to hear anything on 123.100. Don't they have any dedicated AIR frequencies? I was surprised to hear them suddenly show up on 470.6375(470.6500 on my Pro-62).

The FCC has already pass laws that superceed
State,county,ciy,village,communitity zoning rules forbidding Amateur
Radio operator from putting up antennas.With the help of the ARRL,and
the FCC,laws have went to the top courts,and they ruled in favor of
the FCC,giving hams the privilgles to put up antennas.Now if you buy a
house with a community zoning clause that says,no antennas,then in
some cases,you have signed your rights away,But if you lived there
first with you antennas,neighbors can't make you take them down,as
long
as these are safely installed.Recently the higher courts ruled in
favor of direct TV dishes,even in zoned communities prohibiting them.
On the subject of how does the goverment know what you are listen
to.Its easy, all receivers are weak transmitters.In England if you
don't pay your TV tax,and think you will put curtains over the
windows,it does not matter,the TV's IF,and other ocsillators give off
signals.And the TV tax man in their roving vans will pick it up,and
check to see if you have payed your TV tax,if not your ticketed,or
lose the TV,something like that.
Using Tempest technology the goverment can know not only what
frequencies your radios,scanners,and TVs are tuned to,but also to what
is displayed on our computer's monitor,or printed on your printer from
a distance,as all of these devices give off electronic signitures that
can be decoded with ease.

Thanks for pointing this ScanCat software out to me. This ScanCat
looks pretty robust and I assume it also has an audio recorder.

But...I'm not starting from scratch and re-inventing the wheel. I am
trying to find out if I should consider adding more generic support
for other scanners (other than the ICOM that I own) or just stick to
Icom alone. I am updating an existing application that you might've
heard of called ScanRec. It's pretty old and needs more capability but
it'll never become as big as ScanCat, nor will it ever be anywhere
near as expensive either. ScanRec already has a log file but I want to
also add the info obtained from the radio for the log entries.

Regards,
Dave

> How would you like, i listen to your private conversation (:

Please explain how you construe it to be private.

You might as well write it on billboards along the highway, and then make it illegal for any but authorized people to read them. You're talking into a radio transmitter... Unfortunately, you can't direct the signal only to your intended recipient.

This is how we got into this mess. The cordless and cellphone guys could have done things to make the calls somewhat private, at additional cost. (and it would have sold, as an extra cost feature) Instead, they told their customers that they WERE private, and when the customers found out, the manufacturers went crying to the FCC. I can't imagine how they got a favorable judgement, except by heavy lobbying and campaign contributions.

The communications act of 1934 made everything quite clear.

Hardly true, Bud.

I have NEVER told a lie on this NG. Infact, I have NEVER told
a lie in my entire adult life.

YOU on the other hand, have been caught in lies on this NG
before!! For example, remember the time YOU were caught
forging messages as BC?

I bought a Pro-94 on sale this week and (with no help from my uninformed salesman) when I got home, learned this unit lacks features I want. I thought all scanners these days would do these two things.

Those two things...

1) scan trunked systems AND regular systems together
2) interface to my computer (with software and cable)

The Pro-94, as you must know, does neither. If Radio Shack will let me exchange it, I'd like to get something else. That's where you come in, if you have suggestions.

I am a novice and want to listen to various types of frequencies, so flexibility is important. I want a unit that will store frequencies, too. I noticed that a few listed on Radio Shack's website didn't seem to do that?

Hand held or desktop isn't important. I think it's illegal for me to scan 'out there' in my location. I like hand held, but if the desktop is a better radio, I would go with that.

My price range includes Pro-92 and Pro-93 in hand helds, and Pro-2053 in desktop. Is the Pro-2052 THAT much better? At 10-cents a pop bottle, I'd have to collect 500 more empties to make up that difference. It would really have to be worth it!

Thanks for your help.

U.S. Commando Solo II takes over Afghan airwaves

by Jim Garamone
American Forces Press Service

10/29/01 - WASHINGTON (AFPN) -- After years of Taliban propaganda, the Afghan people are hearing another voice.

At any time of the day or night, an Air Force Special Operations Command EC-130E Commando Solo II is in the area of operations, broadcasting news and information to the Afghan people.

The aircraft and crews fly a variety of missions. In Afghanistan, they are broadcasting music, news and information in the various languages of the country. These are radio broadcasts only.

The planes, which are based at Harrisburg International Airport, Pa., are part of the 193rd Special Operations Wing of the Pennsylvania Air National Guard.

Army specialists in the language and customs of the area prepare the broadcasts.

The capability allows U.S. Central Command planners to warn the Afghan population to stay away from Taliban and al Qaeda targets. The broadcasts stress that the coalition campaign is not aimed at the Afghan people, but at the terrorists and their Taliban supporters.

"We have no wish to hurt you, the innocent people of Afghanistan," reads one English translation of a broadcast. "Stay away from military installations, government buildings, terrorist camps, roads, factories or
bridges."

Another broadcast told the people of Afghanistan why the United States is attacking the Taliban and al Qaeda.

"On Sept. 11, 2001, thousands of people were killed en masse in the United States," it reads. "Among them was a 2-year-old girl. Barely able to stand or dress herself. Did she deserve to die? Why was she killed you ask? Was she a thief? What crime had she committed? She was merely on a trip with her family to visit her grandparents. Policemen, firefighters, teachers, doctors, mothers, father, sisters, brothers all killed. Why?"

The broadcast went on to explain that the attacks in New York and the Pentagon were on innocent people -- an act forbidden by the Muslim Koran.

"(The terrorists) believe they are heroes, Ghazi warriors triumphing over the evil of the West," the broadcast continues. "However, the truth is they are murderers and do not represent Islam."

Ghazi warriors are Muslim heroes from the early days of the religion.

Ham radio operators can listen to the broadcast at 8700 kilohertz, said 1st Lt. Edward Shank, a spokesman for the squadron.

The squadron has participated in operations in Panama, Bosnia, Kosovo and during the Gulf War. Their aircraft have been modified to not only handle radio, but television broadcasts. They can broadcast via tape or live.

"If needed, we have the capability to take a speech by the President of the United States and beam it live via satellite to the aircraft, which then would broadcast it," Shank said.

The name "Commando Solo II" also has meaning. Commando refers to the special operations mission, and Solo refers to the fact that the aircraft can go it alone, Shank said.

You would be surprised at how effective
just getting your message out is in bringing
people over to your side. Much of the "bad"
polls that republicans get is due to only having
one view published via the media. One has
to aggressively insure that one's position is
heard.

Before you go bananas, try a couple of routine things if you haven't. Check out the connection from antenna to scanner for anything that could be attenuating the signal. Clean both the antenna and scanner connector. Look for something that might be shorting the center conductor to the BNC connector. If none of that works, swap out antennas with a known good one. Do other scanners work in the same area as the one you have this one in? Perhaps something electrical has been installed nearby washing out your signal. The inverse square law basically states that if you double your distance from the tower, you halve the power to the scanner, conversely if you halve the distance to the tower to 1.5 miles the signal should double. You can try to see if your signal improves by getting as close as possible to the tower. If it comes in about the same power that it did on the other scanners did at twice the distance, then you have a problem with gain on your new unit assuming the tower is transmitting at the same power. In that case, take it back - a component is bad or poorly adjusted. Another possibility is that the antennas on the tower itself have be realigned thus affecting the gain you are receiving.

Personally I think the PRO-92/PRO-2067 are the better units. They offer
more features than their PRO-93 based competitors. Such as:

500 vs 300 channels
CTCSS decoding
Lots of available software, both freeware and payware.

And I prefer WinScan780. There are many ways to program this scanner,
and other scanners as well. A beginner could learn the manual method
first, then try some of the demo software packages available on the
net to find one he or she prefers.
The 780 is a very nice scanner, for beginners and seasoned veterans
alike.

I clearly remember when the Luftwaffe was bombing us, every night my family would listen to "Lord Haw Haw" (William Joyce) on Radio Berlin explaining why we should surrender and join the Fatherland in protecting civilization.

It certainly convinced us that Churchill was lying!

During the Korean and Cold Wars, during much of which I was in the miliary, I used to listen to Radio Moscow on a regular basis. They were equally convincing.

many programs ( like scancat ) have audio recorders ...
Scancat's SE version offers the most recording / monitoring
functions ( Visual Radio 3 or 4 probably beats ScanCat to death , tho
)

>But...I'm not starting from scratch and re-inventing the wheel. I am
>trying to find out if I should consider adding more generic support
>for other scanners (other than the ICOM that I own) or just stick to
>Icom alone.

By reinventing the wheel ... My meaning was ... why bother
rediscovering the interface communications protocol for
all of the different radios when another company has already
done it for you.
Most of the better programs ( Like Scancat ) already have it included
in their software ..for " NEARLY EVERY " conventional ci-v scanner
ever made. ( ever , since there aren't all that many of them anyway )
There are a few exceptions but they are easily " picked up " with just
a few weeks of watching the alt.binaries.radio-scanner ng.
Past those NONE others exist in the civilian market . ( worth messing
with ) Look at " ALL " the optoelectronics devices too ..because
most of the control programs miss many of them. Their commo
protocol is easy to acquire from numerous free programs from the
optoelectronics site. ( they have " just " what you need there )

I am updating an existing application that you might've
>heard of called ScanRec. It's pretty old and needs more capability but
>it'll never become as big as ScanCat, nor will it ever be anywhere
>near as expensive either. ScanRec already has a log file but I want to
>also add the info obtained from the radio for the log entries.

There are a LOT of those kinds of programs around ..like ScanRec and
RecAll and RecAll Pro , VOX Recorder, and Voice Key Express ...
plus the several " professional grade " recorder modules, like in
Visual Radio ver 3/4 are pretty advanced too ... maybe you could take
the best features from all of them and make it a freeware program (
like ScanRec ) ...THAT would be something people would probably like
to have.

Plus consider ( related to all your sweat and labor ) that " anyone "
that wants ..can have ANY of the software packages free ... if
they so choose ..from the binaries NGs.

I have listed some useful links for you. In these links are MANY
voice recorder programs for you to take a look at. ( 5 different
ones at muenster.de alone ) You probably have all these links
but if not here they are ... ( there are MANY more but these are
a few of the currently more popular ones )

hope this is useful info .....

cheers

If an American voice on my radio says "stay away from targets" and
I see a B52 overhead, I'm gonna kick my camel HARD to vacate the
area! If they hang out in the vicinity of Taliban/al-Qaeda, they need to
understand they are standing in danger. We obviously do not want to
harm innocents, but the enemy is storing weapons in mosques and
using schools as barracks. They deliberately murdered civilians on
American soil, but try to "guilt" us about inadvertent civilian casualties.
They can examine http://www.amishrakefight.org/gfy to see how
guilty I feel about that!

With all kind wishes,

(���) 73, de Hans, K0HB

The sooner we stop worrying about innocents, mosques, hospitals
and schools the better. In a war people get killed. Lots of shit
happens and as long as it happens to the other guy, it is perfectly
alright.

A torch to the enemy and his house. May his fields burn
and his children bleed.

Bob Kolker

Preamps or "signal boosters" amplify all signals, weak and strong alike.

The problem with using one with an outdoor antenna, is that strong signals
will overload your scanner regardless of where the amplifier is.

If your receiver has a large dynamic range (most scanners don't) you
will get somewhat better sensitivity by installing the preamp at the
antenna. If your feedline losses are small, it will work fine at the
receiver end.

Nuke Afghanistan, Pakistan, Iraq, and maybe Indonesia for
good measure? There are reputed to be terrorists in all
these countries, and I suppose that if you don't care about
innocent life or proportionate responses, it might look
like an option. Though I suppose bombing Indonesia might
damage the arms export markets.

>::U.S. Commando Solo II takes over Afghan airwaves
>::
>::by Jim Garamone
>::American Forces Press Service
>::
>::10/29/01 - WASHINGTON (AFPN) -- After years of Taliban
>::propaganda, the Afghan people are hearing another voice.
>::
>::At any time of the day or night, an Air Force Special Operations
>::Command EC-130E Commando Solo II is in the area of operations,
>::broadcasting news and information to the Afghan people.
>::
>::The aircraft and crews fly a variety of missions. In Afghanistan, they
>::are broadcasting music, news and information in the various languages
>::of the country. These are radio broadcasts only.
>::
>::The planes, which are based at Harrisburg International Airport, Pa.,
>::are part of the 193rd Special Operations Wing of the Pennsylvania Air
>::National Guard.
>::
>::Army specialists in the language and customs of the area prepare the
>::broadcasts.
>::
>::The capability allows U.S. Central Command planners to warn the
>::Afghan population to stay away from Taliban and al Qaeda targets.
>::The broadcasts stress that the coalition campaign is not aimed at the
>::Afghan people, but at the terrorists and their Taliban supporters.
>::
>::"We have no wish to hurt you, the innocent people of Afghanistan,"
>::reads one English translation of a broadcast. "Stay away from military
>::installations, government buildings, terrorist camps, roads, factories

>::or
>::bridges."
>::
>::Another broadcast told the people of Afghanistan why the United
>::States is attacking the Taliban and al Qaeda.
>::
>::"On Sept. 11, 2001, thousands of people were killed en masse in the
>::United States," it reads. "Among them was a 2-year-old girl. Barely
>::able to stand or dress herself. Did she deserve to die? Why was she
>::killed you ask? Was she a thief? What crime had she committed? She
>::was merely on a trip with her family to visit her grandparents.
>::Policemen, firefighters, teachers, doctors, mothers, father, sisters,
>::brothers all killed. Why?"
>::
>::The broadcast went on to explain that the attacks in New York and
>::the Pentagon were on innocent people -- an act forbidden by the
>::Muslim Koran.
>::
>::"(The terrorists) believe they are heroes, Ghazi warriors triumphing
>::over the evil of the West," the broadcast continues. "However, the
>::truth is they are murderers and do not represent Islam."
>::
>::Ghazi warriors are Muslim heroes from the early days of the religion.
>::
>::Ham radio operators can listen to the broadcast at 8700 kilohertz,
>::said 1st Lt. Edward Shank, a spokesman for the squadron.
>::
>::The squadron has participated in operations in Panama, Bosnia,
>::Kosovo and during the Gulf War. Their aircraft have been modified to
>::not only handle radio, but television broadcasts. They can broadcast
>::via tape or live.
>::
>::"If needed, we have the capability to take a speech by the President of
>::the United States and beam it live via satellite to the aircraft, which
>::then would broadcast it," Shank said.
>::
>::The name "Commando Solo II" also has meaning. Commando refers
>::to the special operations mission, and Solo refers to the fact that the
>::aircraft can go it alone, Shank said.

Well, you had another media outlet to compare it against. Plus American
military personnel are likely more sophisticated than illiterate desert
peasants. The Taliban had only three radio stations in the whole
country. We knocked those out, and are now the only broadcaster in
Afghanistan. Factor in those illiterate peasants, and we are in a better
position than Lord Haw Haw or Radio Moscow was with literate, educated
Americans.

# 1388. Toilet Boy Lies & Lie & Lies - See Proof

like shooting fish in a barrel .....

Yo - Toilet Boy

R E A L I T Y C H E C K

Toilet Boy, you're still a liar and a fraud.

1. It was proven you lied about the first date of your appearance on the Internet.

2. It was proven you lied when you denied making the claim about patronizing under age child prostitutes.

3. It was proven you lied when you claimed to have written "several technical articles" for the ARRL and other technical publications.

4. It was proven you lied when you claimed to have adopted your dead sister's children.

5. It was proven you lied when in the span of two weeks you claim to be married in one forum and single in another.

6. It was proven you lied about having college degrees.

7. It was proven you lied when you denied you were identified as a known Internet abuser by Joe Greco on his published lists of spammers and idiots.

8. It was proven you lied when you claimed you weren't stealing Internet access and your employer terminated you for theft of services.

9. It was proven you lied you claimed you've never used fictitious or illegal Internet address.

10. It was proven you lied when you claimed you were not the most prolific poster of off topic messages.

11. It was proven you lied when you said WD-40 was unsuitable for electronic use by posting another endorsement from Roy Lewallen,

w7el@teleport.com, which you ignored.

12. It was proven you lied about your place of employment when others
posted your work telephone and related data. It was also proved that
*you* worked at that office and not your retired father.

13. It was proven you lied when you claimed that Bill Cheek had never
been a member of Mensa.

14. It was proven that you lied when you claimed
to have never lost an ISP for your forged cancels.

15. It was proven that you lied when you denied
using numerous fake identities on the Internet.

16. It was proven that you lied when you denied
you've never blown up a repeater system through your incompetence
and total lack of technical expertise.

17. It was proven that you lied when you denied
trying to break into other computer systems using Back Orifice.

18. It was proven that you lied when you claimed
you had "acquired MORE FCC licenses ... than could be counted
on one hand!"

19. It was proven that you lied when you claimed
you have made your "living from the Radio Communications Field
for most of the last 15 years."

20. It was proven that you lied when you denied
having stalked Bill Cheek for over three years.

21. It was proven that you lied when you denied
being kicked off Fidonet by Bill Cheek.

22. It was proven that you lied when you claimed
Bill Cheek had been kicked off of Fidonet.

23. It was proven that you lied when you claimed
a police had been filed supposedly about harassing phone calls
made to you at your place of work.

24. It was proven that you've emailed death threats
to your detractors on the Internet.

25. It was proven that you lied when you claimed to
"have helped resolve" the problems of the scanner newsgroups
and have "rid this NG of trouble makers."

26. It was proven that you lied when you denied
sending bogus complaints using aliases to the Internet providers
of your detractors.

27. It was proven you lied when you've made hundreds of rouge
cancels over the course of the last several years

28. It was proven you lied when denied stalking Bill Cheek since his death

29. Its been proven SEVERAL HUNDRED TIMES that when you disagree
with someone (all of us who know what a kook you truly are) you
crosspost to many non scanning newsgroups

30. If been proven that the only time you appear to RRS, it's only to
caused trouble.

31.) Your currently "proving" your obsession with the late Bill Cheek
is now directed at Blake.

32.) It's been proven dozens of times that you answer to "Toilet Boy"

Now someone posts a warning about Blake (likely you) and if one looks just under the covers of the URL provided, there you are
_supposedly_ substantiating these allegations. Pretty lame Toilet Boy!

You won't be responded to, just merely reminded of the kind of nut you are when to opportunity
presents itself.

Kinda like beating a retarded child. We all await you "standard retort!

It's hard to follow every rule in war. Yes, war crime law is important to follow, but bombs will go astray, especially since they are probably using mostly dumb bombs and saving the few smart ones for cool camera footage to feed to the media-just like in the gulf war. Now they're carpet bombing Taliban troops, and I expect innocents nearby to get hurt, especially if the Taliban go the human shield route that Saddam did. So American broadcasts telling the peasants to stay away from targets are needed. (Also, they should make the food packets a different color than the cluster bombs, but that's off topic.)

What is morality? Someone's opinion as to what is right and
what is wrong? When one wins the war, he is automatically
right. When was the last time a victor was tried for war crimes?

Not true, in fact the Navy really likes TRF receivers. They are pain
to design and build, but they have no oscillators in them. They kind
of fell out of style in commercial sets in the 1930's, but you can
build one. Building a TRF TV set would be quite challenging, but no
doubt it could be done. The other problem with the existing detectin
technology is we now have so many devices that are radiating energy
all over the spectrum, that a good argument could be made that instead
of TV set local oscillator, it was the clock in a computer, or other
device....

# 1395. Question re. power supply for scanner radio

Newsgroup: rec.radio.scanner
Date: 2001-11-01 23:00:24 UTC
From: "Ian W. Douglas" <idouglas@calcna.ab.ca>
Message-ID: <Pine.A41.4.05.10111011555530.32484-100000@srv1.calcna.ab.ca>
Source record: 57846
Cross-posted to: sci.electronics.basics,rec.radio.scanner,sci.electronics.equipment,alt.radio.scanner

Thanks again to all who replied to my post in the scanner newsgroups regarding scanner recording with a VOX (Automatic Voice Recording) tape recorder. I have some more questions regarding scanner recording which I hope that readers on these newsgroups might be able to help me with.

I would like to connect the earphone output from a Pro 2050 scanner to the mike jack on a Radio Shack VOX tape recorder, to facilitate automatic scanner recording using the tape recorder's VOX function. I have tried to do this, but I noticed that as soon as I turned the scanner on (with a cable connecting the scanner's earphone jack to the mike jack on the tape recorder) then the tape would start rolling, and being recorded onto, even with the VOX function turned on. The VOX function worked with my own voice near the tape recorder's mike, and with nothing plugged into the machine's mike jack. After some fiddling, I found that the very faint 60 cycle hum from the scanner's audio output (it was running off the AC mains with an external power supply) was setting off the VOX function on the tape recorder, no matter how low the scanner's volume setting was, or how high its squelch setting was, etc.

I have fixed this problem temporarily by running the scanner from a 6 volt lantern battery, even though the scanner really needs 12 volts. The scanner still runs, except the display backlight never comes on, due to insufficient power being fed to the instrument. There is still a numeric (channel, etc.) display, sound, etc., and the tape recorder will still record automatically only when the scanner pipes up and talks; and I have listened to the successfully-made recordings done with this setup.

I did this by connecting the battery to the cable/plug from an old discarded answering machine's external power supply, as the plug was similar to that used to get power into the scanner.

My questions are these:

1) I am thinking of running the scanner off a Radio Shack regulated power supply for CB radios (the power supply gets its power from the AC mains), rated at 12VDC, 3 amps. This would kill two birds with one stone, as I could also run a CB radio off this power supply. (I would only run one radio at a time off the power supply, and disconnect one radio when the other is in use). Is this a good idea? The power requirements of a CB radio are different from those of a scanner, as a CB can transmit at 5 watts, but a scanner only receives; so a scanner needs a lot less power, even if needs the same number of volts as a CB. Do I risk frying the scanner if I try to run it off such a power supply? Could this be possible due to the under-load characteristics of the power supply being different

from its static characteristics, and also due to not using the power supply for the specific task for which it was designed?

2) Will such a power supply furnish power that is smooth and filtered enough such that the scanner's audio output will not have a 60 cycle hum loud enough to set off the tape recorder's automatic voice recording function?

Thanks in advance for any help,

Ian Douglas

If the crystals are marked, it's easy to identify whether they are
Realistic/Regency 10.7 MHz IF crystals or Bearcat 10.8 MHz IF crystals. Check
out this page for further information:

Or you might just clean up the output of the power supply that
comes with the scanner.

For sale IC-R10 hand held receiver in very good condition.
It is a little over one year old. I do not smoke. No software.
Cell blocked. Comes with box, manual, antenna etc PLUS
THE SERVICE MANUAL. No problems present or past.
Selling with 8 "AA" nimh bats rated at 1200 mAh.
(The radio comes with 4 "AA" nicad bats rated at 700 mAh
which I no long have.) The suppled wall wart may not charge
these minh bats. I use an external charger for the nimh and have
never tried to charge the nimh inside the radio. I switched to the
higher capacity nimh bats for more ops time per charge.
Asking $250 OBRO shipped insured via UPS.
Jerry in Sacramento, CA.

PRO-92 if you live in a location that has good signal strength for
the trunked system. The '92 is not the most sensitive of receivers, but
will scan conventional and trunked banks at the same time and is loaded
with features (CTCSS/DCS, alpha tags)that make it a delight to use. The
addition of a better antenna (the optional duckie that RS sells is NOT
any better, BTW)will be of some benefit in overcoming the sensitivity
problem.

Just got a Pro-94 Radio Scanner from Radio Shack.....I am just learning about Trunking and Talk group ID's Question is this how so many features I am trying to figure them out how to punch in a talk group ID? What is list mode my scanner seems to go into it? I just don't understand this stuff and wondered if someone has this same scanner that I could get some email or if you have Yahoo, MSN, or ICQ please email and let me know so I can chat with you on this so I can get this new Scanner set up right.

The Pro-92 I bought was terrible at getting the local Type 2 trunked system. I returned it (within 30 days) and no questions asked!! I bought a Pro-93 and it is awesome!! No CTCSS codes, who cares!! I love the alpha tags though. I got a flyer advertising the Pro-94 for $150. It says the Pro-94 trunks and scans conventional (like my Pro-93 does). If yours doesn't, return it for false advertisment.

> to do this, but I noticed that as soon as I turned the scanner on (with a
> cable connecting the scanner's earphone jack to the mike jack on the
> tape recorder) ...

You need an "attenuator", not a new power supply.

The mic jack is TOO sensitive to receive a signal directly from
the earphone jack. The mic jack wants 0.001V signal, the earphone
puts out 0.1V or more! No matter how much you turn the volume
down, the residual noise will be too high (as you found out!).

The background noise signal is too high and is tripping the VOX
circuit. Does your recorder have an "Aux" input jack? If so, use
it instead of the MIC jack.

Radio Shack (used to?) sell an "attenuating" patch cord. They
called it a "Dubbing" cord, Cat# 42-2152.

Or, you could make your own. You will need 1K and 100K resistors
and appropriate connectors and wire.

```
Earphone Microphone
Tip <--------100K------O------> Tip
|
1K
|
Ring <------------------O------> Ring
```

You can also replace the fixed resistors with a pot for an
adjustable level.

Cheers,
Paul Grohe

That's fine.

>(I would only run one radio at a time off the power supply, and disconnect one radio when
the other is in use).
> Is this a good idea?

Been there, dunnit....

> The power requirements of a CB
> radio are different from those of a scanner, as a CB can transmit at 5
> watts, but a scanner only receives; so a scanner needs a lot less power,
> even if needs the same number of volts as a CB. Do I risk frying the
> scanner if I try to run it off such a power supply?

The scanner is built for automotive operation, so the 12V input
is designed for harsh 12V environments (spikes, noise,
undervoltage, overvoltage).

The CB, assuming the antenna is tuned properly, will draw about
2A to 2.5A peak. As long as there is enough "leftover" current
for the scanner, it should be okay.

> Could this be possible
> due to the under-load characteristics of the power supply being different
> from its static characteristics, and also due to not using the power
> supply for the specific task for which it was designed?

The only problem you may have is when the CB draws peak power,
causing the scanner to momentarily drop out. If it does, then
just don't operate the two together.

These "dropouts" could cause the scanner to freeze or lock-up (it
*IS* a computer!). I would not let it do that too often.

> 2) Will such a power supply furnish power that is smooth and filtered
> enough such that the scanner's audio output will not have a 60 cycle hum
> loud enough to set off the tape recorder's automatic voice recording function?

See previous reply about the attenuator.

Any suggestions???
Justin

Justin,
When you ask for "Any suggestions", it would seem that you are obliged
to accept those you receive with courtesy. Your behaviour is
completely uncalled for, and I believe you owe John an apology.

Mark
whiskey-creek.net
The truth as I perceive it to be.
Your perception may be different.
Triple Z is spam control

Hear hear. An apology is most certainly called for, otherwise I won't tell
you what's wrong with your (and my) BC245XLT.

Ruff

Hi

Anyone know if this technology would be able to scan the Erikkson digital
trunking system employed here in Vancouver BC ?

Thx

Gordon <--newbie :)

Excellent response :)

Do you know if these same freqs would apply to Canada?
I have monitored some 800 Mhz calls here but its not my main area of
interest.

thx
Gordon

Hospitals and Red Cross/Crescent installations are protected
(in war) by the Geneva convention. The terrorists may not be
signed up to it, but those aren't terrorist hospitals.

One (brief) report on the World Service admitted that the
Red Cross storage area had been bombed because military
vehicles had been seen in the area, and it was assumed to be
a store of weapons. That means deliberate attack, not stray
bomb. This report was (carefully, presumably) not repeated.

The food packet farce should be stopped altogether.

It's looking increasingly likely that thousands (if not
tens or hundreds of thousands) of innocent people will
starve this winter as a result of the bombing. Does
that seem acceptable "collateral damage" to you?

Ramadan: bombing to go on

Julian Borger in Washington
Friday November 2, 2001
The Guardian

The US announced yesterday that more special forces troops were on the
way into Afghanistan and ruled out a pause in the bombing campaign for
Ramadan: signs of a growing urgency in Washington to achieve some
tangible military gains before winter sets in.

I'm planning to buy a small and reasonable priced scanner, and the models
that have interested me are alinco djx-3, yaesu vr-120, and icom ic-r2. Also
information about other equal brands and models are welcome!
Anyway they all seem to have potential for being my new scanner so I'd like
to hear some user experiences. Which one you prefer and why, and what are
the weaknesses/strengths comparing the models?

Well, after reading some excellent posts describing your extraordinarily disruptive, infantile and just plain idiotic behavior over what must be several yearss now, it's really best that I ignore you from now on. Your sole purpose here is to show your disrespect for people who know considerably more about radios than you will ever know. I refuse to contribute to your disgraceful attempts to denigrate the quality of this newsgroup. So good bye, little man. In parting, I will admit that I do feel sorry for you. I wasn't aware there were people like you who are so truely pathetic and so lacking self worth or dignity.

```
Hmmm, let's see now what filters do I need to create? From what I've read, I
will have to use several variations of this idiot's name to filter out all
of his feeble attempts to be noticed as the global village idiot....
```

You, nor the guy on the camel, will ever see the BUFF (B-52).
BUFF's operate from circa thirty thousand feet. The first thing
you, or Mullah, would notice is that everything is blowing up all
around you.

Of course the bombing is puny compared to the scale of Vietnam.
For one one the D models have been retired. and were left with
the puny H models, and two, we only have a few of those in
theater.

AMATEUR RADIO NEWSLINE(tm) REPORT #1264 – NOV. 2, 2001

==========

A NOTE TO THOSE WHO ONLY “READ” AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the “spoken word.” It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Three methods of delivery are available: Streaming audio using RealAudio, FTP RealAudio or dial-in telephone. Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to audio servers providing our voice newscast (for free). We think you will find the time you spend listening to be a rewarding experience.

de
The Amateur Radio Newsline(tm) Production Team

==========

Amateur Radio Newsline report number 1264 with a release date of Friday, November 2nd, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Hand held radios to Antarctica, Georgia to host the 2002 United States Amateur Radio Direction Finding championship games and the F-C-C takes action on illegal C-B radios. These stories are first on Amateur Radio Newsline report number 1264 coming your way right now.

HAM RADIO TECHNOLOGY: IRLP REACHES ANTARCTICA

Imagine picking up your H-T, calling your friend and asking him how the weather is. He responds with a crisp clear signal and tells you that its 70 below Zero and snowing. Outside your window the thermometer says its 80 and you plan a day at the beach. Welcome to the world of Internet Repeater Linking as the system expands its global coverage to Antarctica. Nate Dueher, WYZ0X, has more from Denver Colorado:

--

The Internet Radio Linking Project has come to Antartica. On October 23rd, Chuck N0NHJ, set up the first Internet radio link on the continent. A few days

later we caught Chuck and a few other hams on the air to ask him a few questions. Let's listen in...

Terry, N0PQV in Denver, Colorado was the first to say hello:

--

[recording]

--

I got a chance to ask a question of Chuck that I wanted to know. Chuck, how many hams are on the station and how many are active on
IRLP?

--
[recording]
--

And yet another question from Ian, M0CJY in Rottherham, Yorkshire, England...

--
[recording]
--

One of the other questions we had was Justin KC0LBH who wanted to know all about that famous Anartic daylight:

--
[recording]
--

That's all we have time for today. If you'd like more information on the IRLP project on the World Wide Web, go to www.irlp.net. This is Nate Duehr, WY0X reporting.

--

Once again, if you are interested in tying your repeater to the Internet Repeater Linking Project go to www.irlp.net on the world wide web. (NY0X, ARNewsline(tm)) {This complete very ecxciting QSO is available in RealAudio at www.arnewsline.org on the FTP transfer page}

**

RADIOSPORTS: ATLANTA TO HOST NEXT US ARDF CHAMPIONSHIP GAMES

The South-East will host the next United States 2002 Amateur Radio Direction Finding competition. Newsline's Joe Moell, K0OV, tells us where and when the event will be held.

--

The Georgia Orienteering Club has been selected to host the second USA Radio-Orienteering Championships, to take place April 19-21, 2002. The competition will get under way near Atlanta on Friday afternoon with a practice

event, followed on Saturday by the main two-meter hunt and on Sunday by the 80-meter hunt.

In addition to the hunts, there will be a cookout on Friday evening, a dinner on Saturday night, and an award ceremony following the 80 meter hunt, all included in the registration fee. Lodging options include cabins in the park and campgrounds with RV hookups. There are also many local motels and bed-and-breakfast inns.

Standard international rules will be used for these foxhunts, which are all on foot in beautiful woods near Callaway Gardens. The Championships are open to anyone, beginner or expert.

Slovakia will host the next World Championships of foxhunting in fall 2002. Positions on USA's team that will travel to these championships will be determined by individual performances in the Atlanta event, as well as in last summer's USA Championships in Albuquerque.

It's not too early to start making plans to attend the second Radio-Orienteering Championships near Atlanta. For more details and registration information, see the official Championships Web site. The exact URL is rather long, but you can get there in just a couple of clicks by going to my foxhunting Web site: www.homingin.com. That's "homingin" -- as one word -- homingin.com. Or you can write to me at my callbook address.

From sunny southern California, where foxhunters are already practicing for the championships, this is Joe Moell K0OV, for the Amateur Radio Newsline.

--

Again, the web address for more information is www.homingin.com. (ARNewsline(tm), K0OV)

**

ENFORCEMENT: FCC VS ILLEGAL CB SETS

The FCC has gone after some illegal gear seemingly designed for operation on the Class D 11 meter Citizens Band. This, as it issues a citation to an alleged supplier of the equipment in Oregon. Amateur Radio Newsline’s Norm Steely, KI7UP has the details.

--

In its September 17th letter to Truck-n-Travel and copied to its owner, Eugene Trucking Haven, FCC Portland Oregon Resident Agent Ben Nugen leaves no doubt as to what is going to happen. Either stop selling non-FCC Certified radio gear or the consequences.

His letter states that last July 23 that agents from the FCC observed uncertified Citizens Band radios displayed and offered for sale inside the Truck-n-Travel located on East Pearl Street in the city of Coberg. The FCC says the radios included four models from Galaxy and one from a company called Delta Force. The Commission says its records show that one of these CB sets

have been granted an FCC equipment authorization. It warns Truck-n-Travel that the marketing of these CB radios, or even just advertising them is a violation of Sections 2.803 and 15.101 of the Commission’s rules. It tells Truck-n-Travel that it can fine them up to $10,000 per violation per day and that can go on to a maximum of $82,500.

The letter then gives Truck-n-Travel the same warning that numerous ham radio violators have received over the past several years. It tells the company that, in accordance with Section 503(b)(5) of the Communications Act, it has 14 days from the date it received the citation to submit any statement it has to make concerning the alleged violation. And the FCC adds that the Commission staff will use all relevant material information it has -- including information disclosed in the Truck-n-Travel reply to determine what, if any, enforcement action is required to assure current and future rules compliance.

--

More on this case as information is made available. (FCC)

**

ENFORCEMENT: NY REPEATER UNDER SCRUTINY

The FCC has told a repeater owner to explain the operation of his machine. A repeater that FCC Special Counsel Riley Hollingsworth says is on the air all by itself:

--

Hollingsworth: “We opened an audit of a repeater opewrating in Elmhurst New York, KB2PRV, after our evidence showed no identification, no appart control operator, and no apparent coordination.”
--

Hollingsworth says that the letter of inquiry went to Ramon D. Florimon who holds the KB2PRV callsign. He was given 30 days from reciept of the October 2nd letter to respond to the FCC. (FCC)

**

BREAK 1

This is ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, including the Southern California Amateur Teleprinter Society net serving West Covina California.

(5 sec pause here)

**

RADIO REGULATIONS: FCC CLARIFIES FUTURE OF CORES

The FCC's Wireless Telecommunications Bureau has clarified several issues regarding Amateur Service implementation of the Commission Registration

System--or CORES. The ARRL Letter says that starting December 3, everyone doing business with the FCC--including amateur licensees--must obtain and use a 10-digit FCC Registration Number when filing.

Amateur licensees now registered in the Universal Licensing System or U-L-S already have been cross-registered in CORES and issued a FCC Registration Number by mail. The FCC said it planned another cross-registration by November 28th. Amateurs can check to see if they have an FCC Registration Number via a U-L-S license search. Many Internet call sign servers, including ARRL's, also can provide this information. (ARRL)

**

RESCUE RADIO: JUNGLE RESCUE ASSIST

Ham radio played a role in reuniting with his family a man who had been hiding in the jungles of Guatemala for over three decades. The C-Q Magazine website reports that 72-year-old Salomon Vides of El Salvador emerged from the Guatemalan jungle recently after hiding there for 32 years from a war that lasted about 100 hours.

In 1969, El Salvador invaded Honduras and Vides, a migrant worker, ran into the jungle to escape retaliatory raids. The Organization of American States quickly brought the war to an end, but Vides says he never got the word. He was discovered in August by Rene Sonabo, a taxi driver and Guatemalan ham radio operator, and Sonabo’s son. After persuading Vides that no one was trying to kill him, Sonabo used his amateur station to relay the news to Vides’s stunned family in El Salvador. He has since been reunited with his brother, but the family had not been able to locate his wife and three children. (CQ)

**

THE LAW: THE COST OF ATTACHING TO POLES

The United States Supreme Court is examining a complex Internet case that could eventually affect the availability of online services and what most people pay for them. The court is expected to rule by next summer on a fight over the cost of establishing and maintaining some Internet and wireless networks.

Specifically, the fight concerns the rent that cable television companies must pay utilities to attach wires for high-speed Internet service to the utilities' poles, and whether the Federal Communications Commission can control the rate. The justices also will consider whether cellular telephone companies are entitled to pay government-limited rates for attaching their equipment to utility poles.

A federal appeals panel ruled last year that the FCC does not have the authority to regulate pole rental rates for Internet service. The FCC claims Congress intended it to have that power. The Supreme Court will decide. (Published News Reports)

**

REPEATER OWNERS ATTENTION: RADIO TOWERS FOR SALE

Are you a repeater owner or a club that operates a repeater? Have you ever dreamed of owning your own mountain-top or high rise repeater site? Well if you have, listen up.

In an e-mail to Amateur Radio Newsline, Tom Swierczewski, the Zoning Representative for American Tower Corporation says that the company has several hundred communications towers for sale throughout the United States. According to Swierczewski, sites vary in height from 100 to 400 feet tall and many include large buildings.

If you or anyone you know is interested in this or if you want to receive additional information on specific tower sites, please contact Swierczewski at American Tower Corporation. The information you need to do this is in the printed edition of this weeks Amateur Radio Newsline report. More information is in cyberspace at www.americantower.com.

( Contact information: 1101 Perimeter Drive, Suite 225, Schaumburg, Illinois 60173. His phone number is 847-240-1508 X 663 - Central US time. E-mail is thomas.swierczewski@americantower.com.) (Tom Swierczewski)

**

HAM RADIO BUSINESS: VK MAGAZINE BITES THE DUST

Another failure in the international ham radio marketplace. This, with the announcement that Australia's longest-running electronics magazine has ceased publication.

Victoria’s A-P-C News reports the current issue of Electronics Australia Today will be the last and it’s a decision saddens many V-K amateurs. This is because many generations grew up building equipment from circuits published in the magazine.

Electronics Australia Today traces its history back to Wireless Weekly, which started in 1922. Radio and Hobbies was formed out of Wireless Weekly in 1939. This was renamed Radio Television and Hobbies in the 1950s and Electronics Australia in 1965. (APC News)

**

HAMVENTION 2002 UPDATE: HAMVENTION TO HONOR THOSE WHO PERISHED ON SEPTEMBER 11, 2001

The Dayton Amateur Radio Association will honor the memory of those killed in the September 11th terrorist attacks and the hams who then volunteered their services to the nation by dedicating the 2002 Hamvention to the theme of Emergency Preparedness. In a letter to potential vendors, the Hamvention Planning Committee said that it was very concerned over the terror attacks and believes that emphasizing the emergency communications aspect of ham radio was a very apropos way to honor those lost in the tragedy.

The letter also contained another rather surprising announcement. The Hamvention planners say that they will limit the number of non-ham radio booths normally purchased by those in the computer industry. In fact, the letter makes it clear that the only computer related vendors permitted to the inside

display area will be those whose products directly relate to Amateur Radio.

This will be the 51st annual Hamvention. The venue remains the HARA Arena just North-West of downtown Dayton. The dates are May 17th, 18th and 19th, 2002. More information is on the web at www.hamvention.org (DARA)

**

RADIO MILESTONE: NRCDXAS AT #200

The National Radio Club's D-X Audio Service will have its 200th issue available this month. Founder and producer Fred Vobbe, W8HDU says he does not think that is a bad record for what he describes as a little audio based magazine talking about broadcast radio that was started in April 1985. We say, congratulations to Fred and to the National Radio Club's D-X Audio Service on this milestone. (W8HDU)

**

OUR HERITAGE: HELP RESTORE THE LST-325 RADIO ROOM

Bob Wilder, AF2HD, is part of the team that's restoring the LST-325 Radio Room and he needs your help. Bob says that most of the radio equipment needed for the restoration of the radio room has been found. Also, they have received a donation from a trucking company in the east who is going to pack and ship the stuff on that side of the country and transport it to Mobile Alabama where the work is taking place.

Unfortunately, some of the gear is on the West Coast. It took $190,000 to perform all the work needed to repair the ships hull, front door and ramp, as well as to sandblast and paint the ship. As a result, cash is short.

Bob says that what's needed now is to receive a donation by some west coast trucker or person who can help getting the equipment out there packed and shipped eastward. At least as far as Dallas where the East coasts trucker can move it to Mobile.

Wilder says that Fred Chapman, W4CHT is coordinating the move. If you can help -- or at least direct the group to a trucking company willing to make such a donation, please contact W4CHT by e-mail to nnn0ppe@infi.net . Bob Wilder can be e-mailed at bwild@earthlink.net (AF2HD)

HAM RADIO IN SPACE: HAM RADIO BALLOON LAUNCH DECEMBER 1ST

Arizona Near Space Research says that it will launch a ham radio carrying balloon on December 1st, weather permitting. The group had hoped to launch from a local hamfest but the urban location of the event is in enhanced Class B airspace which is currently off limits. Instead, a monitoring station will be at the hamfest event. Full information on the flight can be found on the Superstition Amateur Radio Club website. It's in cyberspace at www.qsl.net/wb7tjd. (Superstition Amateur Radio Club)

**

HAM RADIO IN SPACE: LOTS OF HAMS TALKING TO THE ISS

And while on the subject of Amateur Radio in space, hams world-wide are excited about being able to talk to the International Space Station fairly often these days. This is because Commander Frank Culbertson tries to get on the air for general Q-S-O's whenever he can. And he recently had one with Berto Willems, ON1CAU, who had his tape recorder rolling. Take a listen.

--
Audio Only - No Text Available (Download Newscast Real Audio File at www.arnewsline.org)

--

ON1CAU says that contact took place at about 15:25 UTC during the recent Scouts Jamboree on the Air. And obviously signals were 5 9 full quieting – both ways. (ON1CAU, AMSAT BBS)

SPACE EXPLORATION: 2001 A MARS ODYSSEY - A SUCCESS

NASA's 2001 Mars Odyssey spacecraft was safely inserted into orbit around the red planet on October 25 th. This, slighly over two years after the space agency suffered back-to-back failures by Mars missions.

Odyssey arrived nearly directly on its target - 480 miles above Mars' surface. No orbital insertion or areobraking problems were reported by ground controllers. 2001 - A Mars Odyssey is the space probe that hams had been invited to track when it was launched earlier this year. (NASA)

INTERNATIONAL: NZART STRAIGHT KEY NIGHT

The first ever Straight Key Night in Kiwi-Land is slated to be held on the evening of Sunday November 4th. Operation will be limited to 80 Meters from 8pm until 11pm local New Zealand time.

The event is sponsored by the New Zealand's Amateur Radio Transmitters which says to lubricate that old Morse key and enjoy an evening of old time radio fun. NZART it will be an activity night in which everyone can be a winner with a certificate to prove it. For more information visit www.nzart.org.nz on the world wide web. (NZART)

**

DX

In D-X, Gary Halstead, K8KFJ in West Virginia reports a top notch trans-Atlantic QSO on 6 meters. On October 23rd at about 13:50 U-T-C Gary contacted CN8LI in gridsquare IM64. The Q-S-O took place on 50.130 MHz with K8KFJ running 100 watts to a M2 loop at only 20 feet. Gary lives in grid EM98 in the Charleston West Va. area. (VHF Reflector)

Also, Reid Hill, KC5YKX of Corpus Christi Texas says by way of the VHF Reflector that he will be doing VHF - UHF Century Club QSL card checking at the South Texas Amateur Radio Club annual Hamfest on November 10th. Reid also says that Mark Mireles, AD5CA will be doing the Worked All States checking at the same event. The Hamfest will be held at Swanter Park in Corpus Christi. Festivities start at 8:00 AM and go to at least after lunch. Contact Reid by e-mail to kc5ykx@swbell.ne if you need card checking but can not attend this event. (VHF Reflector)

> 
> The food packet farce should be stopped altogether.
> --
> Ken Tough

I may be completely off base on this;

My understanding has always been that since the Red Cross uses the
symbol of Cristianity the organization in the Muslim world was named the
Red Crescent.

Reports from local reporters with the Northern Allicance in today's
paper state that 'some' alliance forces are sleeping in tents bearing
the Red Crescent symbol.

So, it appears that the press has a field day when a stray armament
damages a Red Cross facility (which I would think the Muslims might well
see as an insulting image in the first place) while providing very
limited, if any, comment on the display of the Red Crescent on
facilities used by the Northern Alliance.

I hope the people preparing the propaganda broadcasts show more common
sense than those dropping food and similar sized bombs with the same
colour scheme.

---

All this nonsense reminds me of the time in the Gulf War when the allies
bombed a "public shelter".

The next day the Canadian version of CNN - CBC Nesworld - carried a
piece from a British reported who was on the roof of the building.
He kicked the debris off the military camoflage markings on the roof
then panned around to show the communications antennas and the high
chain link fence topped with barbed wire and a single narrow entrance,
which would result in severely limiting access to the "bomb shelter".

This clip was shown once on the early afternoon of the attack and never
appeared again or since?

But one must remember that the Western press is completely unbiased and supportive of our efforts?

Dave Holford.

That is not my experience. I know several users who agree with me, as I'm sure you know several who agree with you. My point is that there are nearly as many opinions as there are options. It is not a good idea to declare one piece of software to be the best, since that perception is probably based on different standards and expectations than others have.
I tried many programs before choosing WinScan and suggested that the original sender also try several.

## 1445. Wacars Decoding program for ACARS

Thanks for the feedback. I had a Pro-93 for one night and had problems with it and returned it and ordered a Pro-92. I have a Pro-51 running that works great for me, but doesn't have some features I want, like trunk scanning, computer interface, etc. I didn't like the high-pitched noise from the Pro-93. My 51 (any relation to area-51?) has much better sound. Also, I kept thinking about those extra 200 channels I'd have with the 92, and based on how fast I loaded freqs into my 51, I thought an extra 200 would be nice. So actually, with both scanners, I have 700!!!

The software for the Pro-93 isn't ready yet and from what I read in a Pro93 group, it might be a while. The Pro-93 looks nice and feels nice, I must admit. You might join the Pro-93 group in yahoo...

http://groups.yahoo.com/group/PRO-93

My local dealer didn't have the 92 in stock and was only too glad to special order it for me rather than lose the sale. I'll have it in a few days.

Thanks again for the feedback. aclassiquepar

Many of them would have starved anyway as a result of the Towel-N-Bands oppression. However, the fact is that many thousands of US civilians have already died in their "first strike" actions.

And, if they are allowed to continue with their desires, many more US citizens will be killed. When are people going to realize that it is simply a matter of having to kill them or they will kill us? These people are fanatics who want to die for their cause, and that's fine with me...

And as far as the B.S. reports of "civilian casualties" goes, common sense tells you that the truly innocent people have put a lot of distance between themselves and the enemy. Who in their right mind would stay in an area that you know is going to be bombed every day? Those who do remain with the Towel-N-Band and Usama are collaborators who are providing shelter and support, and are therefore legitimate targets.

God Bless America (and the B-52's)!

Was the attack on the WTC prohibited by the Geneva
Convention? If so, we owe nothing to the other side. And
if not we still owe nothing to the other side. We are at war
with savages and the only thing they will understand is
pain and death. The Geneva Convention is bullshit. In
the second world war the Japs did not adhere to it. The
U.S. ready to use gas if the invasion of Japan was required.
When dealing with uncivilized folks, uncivilized means are
appropriate.

Some of your frequencies will likely be blocked if you got your radio in USA. You might see the frequency you want to recieve but it will be blocked. You could take a short trip to Canada to get a real reciever that should work. You might want to check on the internet first, or have a friend there look in to . Some of the new radios are really small.

# 1461. Uniden 895XLT Questions on Line jack & Service Manual

Newsgroup: rec.radio.scanner
Date: 2001-11-03 03:36:51 UTC
From: radio740@att.net
Message-ID: <3be366f1.75495175@netnews.worldnet.att.net>
Source record: 57763

Two questions for anyone who can help with Uniden 895XLT.

1) Looking for a factory service manual with schematics, parts list, and alignment information. Any sources? Looked on Unidens site but found nothing. Any dealers sell them?

2) The "line" jack on the front, what is the impedence of this recorder output? Connected to standard 600ohm line level input of amplifier with no detectable audio. Radio configured per owners manual and using no remote trip (no connection to RCA jack on back). Is the owners manual wrong on setup? Seems pretty easy. Anyone else experience no audio from this jack with channel indicating "line"?

Thanks to any and all that can help!

Chris.

I have a Pro-90, and it does everything I want just fine, except monitoring Mil-Air frequencies. Shameless newbie questions follow:

Is it worth listening to? Is it encrypted? I have a major AFB 30 miles away, and am using a big discone, so I figured I'd get some traffic.

Which radio to use? Best I can figure I need 220 to about 420 or so. I know I can get a RS 2004 or Pro 43 and get the OTHER stuff, which I really don't care that much about. Recommendations?

The pro-94 will scan trunked and conventional systems together. At least the ones they sell for the last year or so, mine does, it says on the rear label, Cat. no. 20-524 A. The A means it is the newer version that has this feature. The mfg. date on mine is 9A00, meaning Sept. 2000, so if you got one that does not have an A I would just take it back and demand a new version, they should not keep an outdated version over a year and pass it off as new.

go to Radio Shack and buy the 2002 version of Police Call magazine for about
$13. It has enough information in it to answer all your questions and get
you going. Good Luck!

> Is it worth listening to?

Sometimes it is. I was at a Blue Angles air show in Scotia NY a number of years ago and brought my 2005 along programmed with all the BA freqs, fresh from the most recent issue of PopCom. We heard some great stuff - especially one plane telling his team lead that there was "something rattling around my cockpit and I don't know what the hell it is". Classic moment. Other people at the show looked at me like I should have some idea or explanation.

>Is it encrypted?

Not usually, but it can be.

> I have a major AFB 30 miles

I'm not too familiar with recent rigs with milair coverage, but the 2005/2006 are great for the base, and if the 43 covers that band it was a well repected rig in the mid 90's.

We know how the taliban treat women, worse than they would treat a dog. A woman is nothing more that something to do work, and have babies to be raised as terrorist. I think it is ironic that some of the U.S. fighter pilots that are wreaking havoc on them are women. That must really be an insult to bin Laden and his taliban cowards.

http://nworegonradio.netfirms.com/mods/uniden/

Date of mfg code must not end in the letters "ID" or after. (ID=94),
except for OAID (Jan94). (On BC700A some "OBID" (Feb94) work)

If the date code is newer, the mod will have no effect and you can damage
the radio easily with this mod, as you are removing the front display end of
the scanner and it takes about an hour. Note the steps in the restored bands
will be 12.5 and not 30, so you will not be getting the frequencies exactly,
but you will be getting halfway between them, this is about like getting
images above the blocked range, which you can already do with any 700
scanner without mods.My advise--spend an extra $100 and get a pro 2006. The
mod for it is cutting a wire and it takes only 2 minutes.

Well, the new 2002 Radio Shack catalog say that, of the handhelds, only the 92 and 93 will scan trunk and standard at the same time. The 94 doesn't. This is according to the features chart on Pg. 101. Possibly the keywords here are "at the same time". Like my 2066, which will scan EITHER conventional OR trunked, but not both at the same time. However, I don't have a 94, so I have no hands-on experience.

Ah, but there's the "stray armament" statement again.
My point was that it wasn't.

It would be interesting to hear if N.Alliance is abusing
the Red Cross/Crescent symbols; but that's western
propaganda effects on the media too. Surely we ought to
hear of these things through the saudi media though?

My point was that the hospitals are not belonging to
"the other side". If some IRA terrorists had blown up shopping
centres or chip shops (which they did) and were harbouring
in the US with protection from extradition (which some were)
would it be right for brits to blow up california hospitals?

Anyway, if an accident happens, it happens. (But IMO,
targetting is a no-no).

Still, had to laugh at the U.S. military line on the hospital
they destroyed as being a "retirement home". Ummm, maybe that
washes in the US, but somehow, call me crazy, but I find it
hard to believe there are retirement homes in Afghanistan.
Come up with a better line for world radio, folks.

My major tips for MilAir:

1) Buy an antenna with a gain factor on that band.
2) Mount as high as you can...BUT...buy the best-insulated coax you can afford and make the cable run AS SHORT AS POSSIBLE!!!
3) Use quality connectors, solder on and don't just twist or crimp.

## 1480. MilAir band gain antenna suggestions?

Newsgroup: rec.radio.scanner
Date: 2001-11-03 11:30:19 UTC
From: SkyKing <gyewug@egfurg.com>
Message-ID: <o0l7utggq7ibovvtpjp7qs88j5fiipqjcj@4ax.com>
Source record: 57781

I'm looking for suggestions for a good gain antenna for reception of the MilAir band (225-400 MHz).

I'm currently using the Diamond discone at about 40' with decent reception, but am receiving a lot of signals with a lot of white noise just barely breaking the squelch. I can tell these are MilAir comms, but the audio is just weak enough under the white noise that it's extremely difficult to understand.

Will a gain antenna make a difference?

I'm already using low-loss coax (Belden 9913) and N-connectors and am wondering if an antenna made specifically for this band will help. Any ideas or recommendations? How about a pre-amp?

I had the earlier model! When I realized that, I thought that was why
they were selling it so cheap ($150.)

I exchanged it for a Pro-93, but returned that when I had problems
with it cutting out whenever the unit was moved. (Same thing happened
with their other unit at the store!) So I ordered a brand new
(hopefully) Pro-92. I have another RS unit (Pro-51) and like it quite
a bit, very easy to use and has held up great, even though it was in
storage for most of those years.

I think I'll change my method of acquiring RS products in the future,
opting for buying it online rather than getting used and old stock
from my local dealers!

Check with KMA Antennas (www.kmaantennas.com). On request, they will
make custom models for whatever frequency range you want. There will
be a noticeable difference in performance over a discone.

Woah! How "many" don't know that journalism is a business? A huge, competative industry driven by the rules of, guess what, supply and demand, the free market. Their product: information. If people don't want that product, the media businesses don't survive.

Have terrorists been sending flu and food poisoning through the mail, resulting in death and illnes to innocent people? This is one aspect of a war against our country.

You have the option of watching whatever you want on TV, or you may just turn the thing off. You can choose not to read the stories in the newspaper that scare you.

> The News . . . yet another necessary evil!

When you go to a cafeteria or restaurant, do you get angry when they offer up dishes that you are not interested in or that you feel are not good for your health? Are these places evil?

Disclaimer: Yup, I'm an evil media lackey.

# 1488. Running Wacars with Lowe Airmaster v 2.0 (DOS Version)

Does anyone have any experience in running Wacars software using Airmaster 2.0 (the early dos version). I can get the encoding software running in a dos window but cannot get Wacars to recognise it as its DDE.

As can be shown by the precipitous drop off in ratings for the old "Three
major TV" nets. Of course, they don't seem to catch on, but that is another
thing all together.

I got the same one last week. I haven't figured out the trunk stuff either. But then I dunno if I even have trunking systems in my area. I have how ever programmed it with 137 freqs for my area. It's constantly fnding something, so much in fact that I often toggle *off* the big city police, amubance and business banks to hear my local suberb police, school, school buses, fire for just my area. I also hear most air traffic. When I was out by the airport a couple days ago I even picked up ATIS info. I almost always hear both sides of the conversation. Totally stumped by the trunking stuff... the manual is poor. I don't think it even mentioned toggling off banks by pushing the number of the bank on the keypad. (I just guessed at that - and was happy it worked).

P.S. - I also created a database on my computer, punched in all the freqs, with channel number and printed them out (Or can look them up in real time) so when I hear something I can see the channel number on the Pro94 and instantly know who it is.

Mine appears to do both at once too.
(if I new how to do trunked)
I'm pretty pleased with it - the only thing I would have liked is a way to program in some text for each channel, so when I hear something, I can look at the LCD and "see who it is" I'm sure I'll memorize some in time, but I find I'm often looking them up on my printed channel sheets I made.

I thought the computer interface would be cool (I love stuff like that) and I could exchange it for the 99.00 one (save 50 bucks) to get the interface option.... but then I thought, how often would I do that? I would run it once, send it the program typed in on the Pc - then wouldn't need to do it again?????? right?
So I figured I didn't need it. I actually enjoyed programming it on it's keypad. - once I figured it out. (the manual is quite poor)

Best value I have found in batteries is at Lee Electronics. You can get a 1700mAh NiMH battery pack for $24.50. So far it's the most power for your money I have come across... Not to mention, very fast and reasonably priced shipping...

http://www.leeselect.com/

Just click on Batteries in the sidebar...

am on the radio shack site as I type this. (I'd like alpha tags and mine could still be exchanged, as I just got the 94) and can't find a price or any thing about the pro 93 on their site. (I did find a manual) not sure if it's worth exchanging the 94 for 93. I have 1000 channel memory, but so far I only use 137 channels. So 300 of the 93 would be plenty. Not sure what to do. the 94 has been fun and was a good price at 149.00

Message-ID: <opUE7.9027$D7.2643251@news02.optonline.net>
Source record: 57597

The "problem" with gain antennas is that whatever increase you get in one direction results in a decrease in every other direction. Even omnidirectional gain antennas only provide gain at a particular elevation angle (usually the horizon) at the expense of other elevation angles.

In the aircraft bands, you generally want to hear signals from all compass directions AND all elevation angles. For that reason, gain antennas present problems.

You might want to use both your discone AND a beam, and switch between them. When your discone picks up something weak, switch to the beam and rotate it for best reception.

Getting good antenna gain and pattern across the entire 225 - 400 MHz range is another problem. A log periodic optimized for that band would be a good choice, and wouldn't be too large. A yagi optimized for 312 MHz would be a compromise.

A good quality, low-noise, GaAsFET preamp designed specifically for this frequency range could be effective. But you might have to build your own. A broadband preamp will have a higher noise figure and may also cause intermod or desensitization unless your scanner has preselector filters in the front end (like the PRO 2004/5/6).

Remember: No matter what you use, there will always be something just out of range ;-)

This IS America . . . you'd be surprised. People think News is God.(Not all)

resulting
> in death and illnes to innocent people?

It does'nt matter how it's transmitted, it's the same story. I do understand the differnce between a "natural" affliction and murder. My point is that the story broke WEEKS ago!! It is NOT news anymore until it develops into something bigger(significantly). WE KNOW THAT ANTHRAX IS IN THE MAIL! We also know the chances of getting it are VERY slim, and even if we get it will be like getting the flu from a rival at the office who sneezed on you or something. Again we don't need to know about EVERY SINGLE case of Anthrax as a "PRIORITY" issue. After you talk about the war, and the politics of fighting a war, and how we are recovering from 9-11 throughout the nation . . . THEN maybe mention a new deveolpment. Do realize the news sounds like this: "ANTHRAX!!! ANTHRAX!! ANTHRAX!! The war. Polotics AND ANTHRAX!!" Enough already.

>This is one aspect of a war against
> our country.

Yes a small one FOR NOW, so let's treat it as such. Thousands of our solidiers(AMERICANS) are out there risking thier lives against a much more real threat. If you want to talk about bioterorism why not talk about the REAL story? Let's talk about the fact that the current Anthrax threat could be simply a test. More than likely a person with the facilities and know-how to produce Anthrax would also know how too send a real threat. How about reporting on weither we are ready for a REAL biological threat? I'll tell you, if I were one of those monsters I would REALLY love CNN. They make it so easy to test America, and it's defenses and be FULLY aware of the results. They have sucesfully delivered a relitivlely harmless drug into our homes. That's like shooting the poresident with a paint gun, or BB gun. That won't likely kill him, but if you were able to succeed in doing so, then you could just as easily have used a real gun and killed him. We allowed them to get close with a "generally" non-lethal weapon, what happens when they a packing a lethal weapon? Are we ready? IF not what are we doing about it? Let's report about treating the American people like children(even though some act like it)? Worrying more about our fears than our safety. What's the story on that? The media has the ability to affect change, and possibly save lives, but they are'nt doing us or them any good reporting about nonsense. Are lives are in danger, and some of us are mature enough to accept that without panic, so let's hear it. There is evidence that "some" terrorists are still attracted to "plane bombs", why are'nt we hearing about that? America is a place that if you don't say anything, or do anything, nothing will be done, so we need the media who has the world's ear to say and do something worthwile(our lives are at stake). We have always been threatened by terrorists to the same degree and even greater than 9-11, but nobody did anything until the Media started talking about safety on planes and otherwise. Are we to belive that we are doing osmething baout a REAL bio-threat without anyone's previous action to prevoke ours? I doubt it. We probably are'nt going to do anything until they come over here with a suitcase bomb, or they start sending a new previously UNKOWN and uncurable virus in the mail. Start reporting about these potential threats, but REAL threats now so those bumbs in DC can start doing something!

> You have the option of watching whatever you want on TV, or you may just turn
> the thing off.

No I don't. The news is so saturated with ANTHRAX, that I can't get to the other news without watching ANTHRAX. Even if you started giving a story by sotry schedule beforehand, that won't help when you give an unexpected "BREAKING NEWS: One more person exposed to ANTHRAX!!" in the middle of other news. There is no choice with ANTHRAX stories. Avoiding ANTHRAX sotries is like going to New York and trying to avoid people.

> You can choose not to read the stories in the newspaper that
> scare you.

What scares me is not the common flu under another name and intentional, but what you ARE'NT talking about. What scares me is that even after 9-11 America still does'nt seem to get it. We won't stop the gunman until he fires, we won't cut the falling tries until they start falling, we won't

plan effective evacuation strategies until we see first hand what happens when you don't. What scares me is that we seem unable to think ahead. It's like every new start up that start with an uncontroled e-mail system where anybody can e-mail the entire company, until somebody(and they ALWAYS do) sends an offensive e-mail to the enitire company a few times. That's scary! That costed thousands of lives, and if we keep it up it will be millions next time. We need to wake up, and the Media USUALLY is'nt helping.

> > The News . . . yet another necessary evil!
>
> When you go to a cafeteria or restaurant, do you get angry when they offer up
> dishes that you are not interested in or that you feel are not good for your
> health?

No because I can go elswhere for food. I have a choice! I have no coice with news. The paper(any paper), CNN, NY1, ABC, it's all the same . . . ANTHRAX. I can't simply go elswhere for news.

> Disclaimer: Yup, I'm an evil media lackey.

Then help do something about things, rather than debating in a news forum. I don't have the world's ear, YOU(or your colleagues) do! Make a difference in keeping American's safe. You have done this somewhat, but more can be done, MUCH more.

For sale IC-R10 hand held receiver in very good condition.
It is a little over one year old. I do not smoke. No software.
Cell blocked. Comes with box, manual, antenna etc PLUS
THE SERVICE MANUAL. No problems present or past.
Selling with 8 "AA" nimh bats rated at 1200 mAh.
(The radio comes with 4 "AA" nicad bats rated at 700 mAh
which I no longer have.) The supplied wall wart may not charge
these nimh bats. I use an external charger for the nimh and have
never tried to charge the nimh inside the radio. I switched to the
higher capacity nimh bats for more ops time per charge.
Asking $250 OBRO shipped insured via UPS.
Jerry in Sacramento, CA.

# 1513. Buffalo, NY Scanner Update

Newsgroup: rec.radio.scanner
Date: 2001-11-03 20:38:44 UTC
From: frank_kienast@yahoo.com
Message-ID: <7a198601.0111031238.47d214cc@posting.google.com>
Source record: 57613
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Hello all,

I have decided to leave my live Buffalo scanner connected at least
through Thanksgiving. After that, I may replace it with at
web-controlled multiband radio.

I have set up a web site which has a direct link to the scanner audio.
It is no longer necessary to open your audio player separately and
paste in the URL. The direct link also allows me to update my IP
address in case it changes.

On the site I also have some pictures of the equipment used to provide
the live scanner audio, in case anyone is interested. I also have a
few links to scanner frequency pages.

The site is at
http://www2.pcom.net/fkienast/scanner/

Feel free to contact me in this group or via E-mail with any comments.
Please note that my new E-mail address is frank_kienast@yahoo.com.
Deja (where I had the old E-mail account) will soon no longer provide
E-mail services.

73,
Frank Kienast

I use ws780 and the only "bug" I found was an error in the
GUI graphics that was easily corrected in a hex editor.
Could you name some of these "bugs" ?
...or are you referring to the fact that the astalavista
referenced cracks don't work on the later versions of ws780?

Source record: 57619

There have been some 225-400mhz omni gain antennas on Ebay in the past. They are military surplus stacked dipoles encased fiberglass and work much better than a discone. Do a search on military or aircraft uhf antenna. I bought several with one being a dual band VHF and UHF version that retails for over $1600. I think I paid about $75 at auction for a new one. I have also used a pre-amp at the antenna with excellent results. My best pre-amp is a bipolar, high level broad band 225-400 version from Angle Linear. The very weak stations become loud and clear and I can hear some that don't exist with out the pre-amp. I use a PRO-2005, R-7100 and several military receivers.

A PCR1000 is not a trunking radio by itself, but it can be done using 3rd party software and a second radio hooked up to the computer dedicated to monitoring the data channels. Personally I don't think it's worth doing all of that, but who knows...

First thing you ought to do is make sure trunking is being used in your area and on what scale. Your local Radio Shack should be able to give you all of the details and provide you a local frequency list. If the trunked system uses just a few channels, then go with the PCR1000 and scan through them. You won't miss anything. If the trunked system is farily extended, then you better go with a dedicated unit.

It's not a legal federal mandate, as you should probably know. It
may be a requirement on the states that they have standardized exams
in order to get Federal highway funds.

Nonetheless, my original sarcastic comment stands, for two reasons:

(1) Does anyone really think that the drivers' license exam
assures basic competency?

(2) Does anyone really think that the Federal government knows
how to assure basic competency?

And a third comment, just for you:

(3) Why is there an Interstate highway in Hawaii? Where does it
go?

This software costs less than your asking price on ebay. Oh, by the way, it doesn't work either. There is much better freeware available for the PRO-92.

Future historians will find the end days were sparked by "David Drum" <dbdrum@home.com> in rec.radio.scanner, on Sat, 03 Nov 2001 17:26:03 GMT, with:

>Been a long time since I've turned on a radio, but the bug is stirring
>again. Now I am hearing some new buzz words like "trunking" for police/fire
>communications. What is that?

Think of it as a timeshare for airtime... users are broke into seperate "talk groups", lots of talk groups can share the same 29 or so freqs, with control information on one freq directing who's on what freq at what time. End result: each talk group appears to "have it's own channel", when in fact they may be x-mitting on any of the systems freqs. When scanning (with the right equipment), you can lock in on a specific talk group, which would pretty much be the equivalent to holding on a specific freq for untrunked communications.

You'll find a much better description at
http://strongsignals.net/access/content/new_user.html#SEC12

>Does one need a special receiver for that?

Yep, and all trunktracking scanners aren't created equal, you'll want to know what sort of system(s) it is you want to monitor (and decide whether you want to monitor trunked & untrunked similtaneously) prior to making a selection.

You may (or may not) find info pertinant to your locality at
http://www.trunkscanner.com/states/

>I'm considering a PCR1000. Will that be able to monitor this or do I need
>some of the 3rd party software to be able to do it? Help!!!

Not going to do it out of the box, don't know about with 3rd party s/w. Basically, you're limited to Uniden and Uniden-built Radio Shack scanners for out-of-the-box standalone trunk tracking ATM, maybe some other option using the computer.

The ICOM R2 is a good little scanner with free software for it available on the internet. It goes up to about 1.3GHz. The sound is terrific. The manual in English is terrible to read and to understand. Especially about how to program the banks. The button used the most (function) is difficult to push in and can be a problem. I'm still learning it after 3 weeks owning it. I'd say given what I know, I would still purchase it. Reception is best in higher frequencies. Shortwave is not very good and needs and external antenna of some sort.

Regards,

John

Find yourself a women? LOL!!

No, it doesn't work. You made a mistake buying bad software and now you want to shift your mistake to someone else. The value of what you are selling is software=$0 and cable=$2.00. If it's so good and you use it, why do you now want to sell it? Actually I recall you trying to sell the same junk for $25 a week or so ago. That evidently didn't work and hopefully you will meet with similar success now.

Message-ID: <aae46dc5.0111031812.60b57e33@posting.google.com>
Source record: 57639

Thanks to everyone for the advice - I picked up a 780 at a local shop and was scanning within about 5 minutes of unpacking it. (Unfortunately the first unit I brought home had a small defect in the display, but I was able to exchange it with no problem). I'm particularly impressed by the nearly endless configurability - this scanner is obviously the product of a lot of feedback from customers.

I'll look into software downloading soon enough, but there's plenty to hear just by searching a few frequency ranges, and using the built in service ranges of the 780.

I've found a could of user-contributed websites that list endless frequencies for my metro area - are there any sites or other sources that are generally considered authoratative (e.g., police, fire, etc.)?

MilAir listening is great, especially now. Yes it is worth listening to. I live in Daytona Beach, FL and have the Kennedy Space Center just 35 miles south of me, 99% of the Combat Air Patrol comms are in the clear (not encrypted). I have NAS Jax to the north (SEALORD) and everyday you'll hear several training missions, non of which are encrypted. Just last week heard a live fire sea launch cruise missle, several freqs used for this and non were encrypted.

As far as radios, anything that covers 220-400MHz will do fine for starters. One radio I would say away from if you live near Cell Phone towers is the Uniden BC-9000XLT. That radio picks up too many cell phone images within the MilAir band it makes searching and scanning usless.

My favorite MilAir scanner is the older RadioShack PRO-2035 (I have two of them and another on the way). I have a PRO-2006 which is a good MilAir scanner. Also a PRO-2052 which is nice. One problem with the 2052 is that you can not change from NFM to AM in the 138-142 range, a range used for some Air-Air and Air-Ground comms.

For antennas this is going to depend on where you live and how near the action is. Being only 30 miles from an AFB, anything outside should do ok. I have a Discone about 20' high which will pick up nearlly all the comms I can hear. I have an AntennaWarehouse (www.antennawarehouse.com) Scanner Beam on a 30' mast with a rotor which is a super setup. This antenna is hooked to 4 scanners via a Stridsberg MCA204 Multicoupler.

Please let us know what AFB you live near and maybe we can share some frequencies.

> ideas or recommendations? How about a pre-amp?

I had nearly the same problem as you. I have a Discone I used for MilAir listening and it did pretty well. But wanted something better. KLM Antennas as someone else in this thread mentioned does make some nice antennas however you will spend nearly $250.00. I probably will give one a try soon. But I did find an antenna that I'm impressed with and requires no modifications to install it vertically.

Check out www.AntennaWarehouse.com and look at their "ScannerBeam". I just installed on at about 30' on a rotor. Big difference over the Discone. And for a $54.00 antenna is very hard to beat. You can see a picture of mine at http://home.flash.net/~av8tor/radios/shack.htm

at least $100 if in nice condition with a bright display. up to $180 on ebay. very under rated scanner, it is the perfected version of the 2022, which was slower, harder to read labels, and dimmer display. with the cell mod it picks up the cell frequencies in correct 30 khz steps. much faster than a 2006, it is a must have scanner.....

make sure the steps are 30 khz so you get the correct frequencies, else you will be getting the signals on the two frequencies that are on either side of the real frequency you want to be on..and you will have to shift back and forth to find the strongest one, it is a real hassle compared to getting the real frequency on a pro 43 for example, or a 2006

Source record: 57651

That's right. And higher gain on antenna means you can pickup signals from 30 miles away. Discones look really cool, but are not high gain. You need to experiment with several different antennas, all high. Use rg6 or rg8, or better, not 58.

Well all I can say is bogus info dude. Go to radioshack . com and get the
manual in pdf for the 94A. Here is a direct quote, and mine does scan
conventional EVEN IN THE SAME BANK as the trunked frequencies, it is an
AWESOME scanner! You can see the conventional frequencies flash in the
display. Direct quote from the manual:

SETTING THE SCANNER TO THE
TRUNKING MODE
Simultaneous Trunking
The scanner allows you to track up to 10 systems at a
time. You can trunk scan or search and scan conventional
frequencies at the same time. You can also program
conventional frequencies in the same bank as
trunking systems.

# 1553. Re: MilAir band gain antenna suggestions?

Source record: 57654

Just DON"T believe what you read on AntennaWarehoue's site.

There is no such thing as a Discone that has 7DB gain as AntennaWarehouse claims, a blatant deception at the least.

As to their TV antenna sold as a scanner log they say "They have higher performance in the 30-50 MHz. VHF low band, 108-137 MHz. Aircraft band, 137-174 MHz. high VHF Public Service band, 225-400 MHz. Military Aircraft and Satellite band, 406-512 MHz. UHF band and the 806-1300 MHz. UHF/Microwave mobile band, than any other antenna we have tested in it's price class, and rival the performance of logs costing many times their price"

AntennaWarehouse refuses to say which antennas they tested though. Why would they hide this? On this NG they claimed they tested them all summer long but refuse to say which ones. Actually is isn't that hard. There is only one other antenna in it's price range, the Grove scanner beam. I doubt it is anything but equal to this. I can guarantee you it doesn't rival antennas costing many times more. That is an out and out lie. ANtennaWarehouse refuses to say which antennas when asked to back their claim. Hmmmm.

Also they claim their TV antenna sold as a scanner beam "Can also be used for transmitting in the 2mt., 1.25mt., and 70cm."

Now a log antenna should be able to transmit on any band it covers. That is the beauty of a log. The claims made by AntennaWarehouse say "it covers 30-50Mhz" but it won't transmit on the 6 meter ham band on 50 Mhz. Why is that? Don't ask AntennaWarehouse, they won't admit their claim of frequency coverage is inflated. They would rather lie about it.

They claim the longest element on this TV antenna made into a scanner log is 8 feet. Now how the heck could that cover 50 Mhz? More telling is how does it get down to 30 Mhz with a 8 ft longest element?

When is the last time you saw a scanner antenna with a F connector? You don't unless it is a TV antenna mounted with the elements vertical or one made by a TV antenna mfg.

Treat AntennaWarehouse like Radio Shack. Buyer beware. If you don't know what you want don't get involved with these people. If you listen to these people you are asking to be fed a line of BS just like their ads.

Glenn

BTW: This scanner beam can be constructed at home. Buy an inexpensive
TV antenna and redrill the mounting holes so it will mount with the
elements vertical, up and down rather than horizontal. Spend $30-$d0
on a decent TV antenna, drill a couple of holes and you now have an
antenna as good and probably better than AntennaWarehouse's TV antenna
scanner beam.

Hi

newbie so... Thanks for your help

Im in Vancouver BC and have seen an ad via this newsgroup for a performance battery from leeselect. http://www.leeselect.com/shopping/holder_battery.htm middle of the page.

Can I get this battery in Canada/Vancouver or is it a custom leeselect item only?

Any comments on this battery and a charger for it? Or will I have to use the supplied Uniden AC Bearcat charger.

Thx again

I have two (2) of Lee's NiMH custom batteries for a PRO-90.
This battery pack runs the PRO-90 for about fourteen (14) hours
on a twenty four (24) charge, using the internal PRO-90 charging circuit
and
regular power supply.I just got a replacement power supply form Radio
Shack also.
I usually run the PRO-90 about 9 hours a day, then plug in the power
supply and
charge the NiMH battery for fourteen hours. Several times a month I'll
let the radio completely run down. Then give it a full 24 hour charge.
NiMH do not exhibit "memory" effect as NiCD's seem to do. But do not
over charge NiMH cells/
packs they burn out sooner than NiCD's
I don't know if they ship up your way, Try sending Lee an order!

# 1560. Re: 780xlt too much for a first scanner?

Newsgroup: rec.radio.scanner
Date: 2001-11-04 07:14:10 UTC
From: "Richard D. Young" <rychard@mindspring.com>
Message-ID: <08p9utc6ipurhdm7v89j73ab46nr1uv95d@4ax.com>
Source record: 57661

Well on Day one,just getting it going is fine.Day2 I used ARC 780 to
read all 500 Memories,Deleteled that which didn't apply,and added
frequencies that did,and used ARC780 to reprogram the radio.Took about
3-4 day for Trunkstart780 to arrive,read the memories set trunking
banks,and talkgroups,reprogrammed the radio,and done some
fine tuning of the files,and tones.And all has been smooth sailing.No
plulling my hair out tring to program 500 ch,each with umpteen
settings.
I think the software was well worth the money, in weeks saved in
programming,reprogramming,programming,reprograming,etc.
I tried WinScan780 the Demo,was glad they screwed up the order and
after 5 weeks I wrote them,to cancel the order,I found the Demo pretty
bad.I had bought Police Call CD,and it did not install right,after a
quart-hearted effort to help,they never did solve the problem,but I
finally did.Just my experience with this software.

Forsale: Uniden Bearcat Scanner
Backlit LCD Display The BC 350A features an easy-to-read 9 digit LCD with backlit display for improved night visibility. Never Used. Paid brand new $130
Asking $60+shipping. For more details please email or call 609-386-9382
Thank you for reding my sale post. Thom_j.
Features:
50 Channel 11 Band Programmable Mobile / Base Scanner
11 Band E-Z Scan Mobile/Base Scannner. Lock-out, band search, LCD display, memory lock, & Instant Weather.
Monitor Emergency Personal, Military, FBI, Secret Service !!
11 Band Coverage Including Ham Bands, Federal Land, Mobile Bands, Weather Band, Fire/Emergency, Marine Band,
Frequency Coverage From 29.0 MHz Through 512 MHz And Ham Frequencies AC or DC Operation
Band Search The BC 350A scans over 22,000 channels and has 11 seperate band search capabilities.
Channel Lockout Lock out unused - busy channels to concentrate on specific channels. Fire & Emergency Scan. Full-Frequency LCD Display. Local Police Scan. Mobile Mounting Kit. One Touch Instant Weather Automatically scans all National Weather Service frequencies.
Preprogrammed Service Search - Programmable Scan Delay - VFO Control Knob - Includes Aircraft Band - Selective Search

No, its a 525, finger slipped while typing that night.

Antenna Warehouse makes a fine product, I guess I wanted people to know that the ScannerBeam in the photo came from Antenna Warehouse. Most people would associate that antenna with Grove. I just didn't want people to think I using Groves over priced Scanner Beam. I just didn't want any confusion regarding my thoughts of Grove and Grove products. I dont like them!

Thanks for the info, everyone. You know, George, this is all your fault anyway because I got the idea from your web site! Anyway, I live between Cincinnati and Dayton, so Wright Patterson AFB (and the museum, I'm so lucky) is about 30 miles away in Dayton. I can already get trunked police traffic (sorta) from Dayton, so I was putting some hope in the AW Superdiscone. Any freqs would of course be greatly appreciated.

Ok, for some more newbie questions: Why is MilAir excluded from most modern scanners? (cell phone "mirror" images?) If I use a beam, do you think I could get away without a rotor (point north)? This thing will have a dedicated antenna.

One more off the wall question: Someone gave me a nice SWR meter. Do they have any use at all in scanning? How do I use the thing?

Traveling East on Route 78 from Warren County New Jersey to the Route 287 interchange and then on Route 287 South to the Garden State Parkway South to around exit 98, does anyone know what frequencies the state police use and I should enter into my scanner?

I realize that this is since its 3 different roadways (Route 78, Route 287 and GSP) that I will have a bunch to enter, I guess.

Just interested in highway information, i.e., accidents, tie-up's road closures, emergencies, etc.

Thanks!

NJSP use a trunked 800MHz system. Details are readily available all over the internet. You would need a Trunk Tracking scanner. You would need to monitor Troop B (North) and Troop C (Central). The NJSP system also carries traffic from the GSP and the NJTP.

I've been hearing occasionally at around 8 PM on weekdays a callsign of "Speedbird" on JFK departure frequencies, then to NY ARTCC frequencies. The pilot has a British accent...is this the Concorde?

Point taken, in part...but there's no reason to believe
that the people responsible for "assuring" basic
competency are the ones with the knowledge.

There's no real reason to believe otherwise, other than
observation of drivers who have passed state exams.

> better, not 58.

I'm putting up a discone here, for broadband monitoring.
The thing with antennas, is that nothing comes for free.
You have three terms. Gain, Beamwidth, and Bandwidth.
Basically, Ga+Bw+Ba = 1
I want the wide frequency coverage, and omnidirectionality, and I'm prepared
to give up antenna gain to get it.
I have a Gaasfet amp that will be installed right at the antenna, powered up
the feedline, that will compensate for some of the low gain. Fortunately,
noise figure is less critical in this application.

I do have some local pager transmitters, but I've also got some open-ended
stub filters prepared to notch them out.

Once it's up, it will feed an R-8500, weather receiver, and trunking
scanner.

> 
> There is no such thing as a Discone that has 7DB gain as
> AntennaWarehouse claims, a blatant deception at the least.

Technically, I don't have a problem with this.
The problem is, that they didn't say dB relative to what.
I suspect the "antenna" they are comparing to might be a "miracle baby"
rubber duckie.

Whenever I see an antenna gain specified without something like dBd or dBi,
I assume dBi, but in this case, it looks like they are comparing to
something rather worse than isotropic.

Not technically wrong (at least as stated above) but definitely misleading.
Caveat Emptor!

> Many of them would have starved anyway as a result of the Towel-N-Bands
> oppression.

Well, people have been predicting disaster for months, which
is why all those aid agencies were busy shipping food into
Afghanistan. Since they can't do that any more, the numbers
of people who are likely to starve is much greater than it
otherwise would have been.

> However, the fact is that many thousands of US civilians have
> already died in their "first strike" actions.

Certainly (though you have to remember that 'their' has nothing
to do with the people who are likely to starve). But it's a
peculiar moral position that says "Because all these innocent
people have died, it's okay if all those innocent people die."

> And, if they are allowed to continue with their desires, many more US
> citizens will be killed. When are people going to realize that it is simply
> a matter of having to kill them or they will kill us? These people are
> fanatics who want to die for their cause, and that's fine with me...

I think your 'they' is confusing people who have killed, and are
likely to kill, with innocents. It's kind of like saying that
since the US government has sponsored terrorism, it's okay to
just kill random US citizens.

> And as far as the B.S. reports of "civilian casualties" goes, common sense
> tells you that the truly innocent people have put a lot of distance between
> themselves and the enemy.

You do know that the borders are closed, don't you?

> Who in their right mind would stay in an area
> that you know is going to be bombed every day?

Not everyone has a choice. They can't just put on their shades,
jump into a car and head for Chicago, after all.

> Those who do remain with the
> Towel-N-Band and Usama are collaborators who are providing shelter and
> support, and are therefore legitimate targets.

So it's okay for other people, not near the targets, to starve?

> God Bless America (and the B-52's)!

I think "God Bless (the equivalents of) Tiny Time" would be
more appropriate.

Is it possible to create a device that is the reverse of a scanner? A device that transmits on any frequency?? It would seem to be as technologically "easy" as a scanner. The only complication I would see is the obvious legal implications for such a device. Just about any radio needs a license, but how do you license a "GOD" transmitter!!?

What about the FCC themselves?? I would think that they probably have such a device?? Wouldn't vocal communication be the first line of defense for the FCC against a FCC rule violator? Simply get on the same FQ as them, and say "Stop"?

I have done the same. I collect, sort, categorize and archive into an Excel sheet.

This is how it's organized:
Frequency - Radio Service - Location - Notes - Confirmation - Status - Source - Date

Anybody have any recommendations on maybe a better organization? Also I'm not so good with graphs. I would love to see a graphical representation of all my frequencies!! This would also help in finding new ones; I'd know were to look, or NOT to look!!

## 1599. Custom made frequencey handbook

Newsgroup: rec.radio.scanner
Date: 2001-11-04 21:14:20 UTC
From: Mark <bmarcos1@tampabay.rr.com>
Message-ID: <MciF7.11261$zK1.4193848@typhoon.tampabay.rr.com>
Source record: 57550

I have a printing company, and I also just started the hobby of scanning.

I found that the handbooks in Radio Shack have general frequencies, and don't cover everything. So I started a new branch to my printing company.

If you want a custom made handbook for your area, just e-mail your address and I will print it. I am charging $10.00.

If you are interested e-mail your info and I will get back to you

Mark

The best radar detector for on-the-road (not city) use is a CB Radio.
Every trucker has one and they know just about where every radar trap is
located.

Thanks. I just got a Uniden/Bearcat Sportcat 180 that I believe has the "trunk tracking" feature.

I am still trying to figure out how to enter in "trunk tracking" frequencies!

So Troop B and C would cover the areas of 287, 78 and GSP that I mentioned?

Walt Bertram wrote:

>others have said its ok.
>
>Can you tell me what will work so I can use this darn thing with an adapter.

The IC-R3 requires 6v DC as an external power source, anything over 6DC will result in "High Voltage" being displayed.

If still available a suitable alternative to the Icom supplied unit in the USA might be the Radio Shack 6v DC, 800mA Adaptor (273-1761, $13.99) You would require the correct 1.7mm connector plug (273-1705) for the R3 which is supplied free with the above adaptor.

Another alternative, although more expensive is a 3-12v DC, 1000mA, regulated power supply (273-1680) from Radio Shack.

Yes! An inverse scanner is not only possible, it does exist and can be provided only to officers of the government. The downside is it takes a special reciever to intercept and translate these signals. These radios are called All-Mode Transmitters. AMTs not only transmit on different frequencies but on different carriers as well. An interesting feature that is that a person can transmit an emergency "beacon" tone on all frequencies at once. This "alert" mode is to be used in times of distress, and sounds like a loud fart in a wooden barn. This digitally-encoded fart sound often carries GPS coordinates of the sender as well as an "alternate" alert which is the sound of a man urinating into a glass jelly jar.

The general public interprets these sounds as a sporadic radio defacation, but others with the All Mode Recievers are alerted to the distress signal, and can respond accordingly with toilet paper or plungers.

Hope this helps!

> It *may* have the ability to scan conventional AM and FM bands (540Khz
> - 1600KHz AM,

AM just does not mean the MW-broadcastband. It's for 'Amplitude Modulation' This is mainly used by broadcasters in the 150 -30,000khz range. It's also used in the CB-band and on aircraft communications betwenn 116 and 137Mhz for only to name the main usings of AM.

> and 88MHz - 108MHz FM),

and FM does not just mean the FM broadcast band. It's for 'Frequency Modulation' FM-broadcast and and TV (tone- signal) are using W(ide)-FM for example. Commercial and security broadcasts mainly are using N(arrow)-FM.
W-FM and N-FM is related to the bandwidth used.
SSB is mainly used by many commercial broadcasts on shortwave and by radio-amateurs.

But AM and FM is degraded by some commercial folks to the meaning you mentioned. :-(

> which means it might be able to scan through commercial radio stations. But that is
> not what scanning
> is all about. So the answer really is NO. You need to buy a dedicated scanner
> probably.

Many broadcast receivers are able to scan in their -limited- frequency range. As most modern car radios can do.

"Real[tm]" ;-) scanners are just able to to demodulate AM, NarrowFM, and WideFM and SSB (divided in LSB and USB) on any frequency it is able to receive. Mine does it from 150khz to 2060Mhz.

Scanning is by meaning automatic search for sporadic(!) or unknown busy frequencies above an adjustable/ sometimes given signal- level in a given/ progranmmable (sometimes preprogrammed) frequency range (frequency- scan) or a bunch of preprogrammed frequencies stored in the scanners memory (memory- scan). Some scanners are able to store automatically the busy freqs found. Most scanners can be programmed for a delay and automatically continue searching after a few second -unless you stop it manually- or they stop and continue by pressing a button. Some are able to continue scanning automatically when a signal disappears.

so now '(cheess)' can sort out if he/ she has a scanner or not :-)

XP has a software compatibility wizard that you might be able to use to get it to run. I'm assuming you want to know if it will work before you install XP, so I'm afraid that's not much help.

I've been using XP for a couple of weeks now, and I've had a hell of a lot of trouble getting stuff to work correctly. I even had a major problem after installing Office XP, which required my having to reinstall XP to fix it. Have been getting weird problems with a lot of the non XP software that I have too. Some apps run fine and then stop working; other times, the programs run slower than they should.

My CD writer is DOA because HP doesn't have an XP driver for it either.

All around, upgrading has been a real drag.

No, Bob Grove simply likes to accuse people of doing things that they didn't do. His email's are rude and his last email newsletter condemned the notion of people listening to HF or scanners in hopes of hearing something strange which could help the FBI in their investigation. Then, after saying the above notion was BS he then has to articles in his magazine which contradicted his own thoughts in his email newsletter.

Besides that, he's charging $20.00 more for the very same antenna that can be bought though another online source (Scanner Beam).

What measures does the FCC have in place to prevent/control this? I know the NYPD have had a number of unauthorized transmitions(some from POs), but what can/does the FCC do about illegal transmitions? I figure they can locate the signal if it is broadcast long enough, but what if it isn't? What if it's mobile? They have to have something in place.

I have a "Scantenna" antenna. Here is an example of this antenna:

http://www.grove-ent.com/ANT7.html

This antenna has a 300-ohm feedpoint. Normally, you put the
300/75-ohm converter at the antenna and feed it with coax. My
question is this: If I use 300-ohm twin-lead directly connected to
the antenna and have the 300/75-ohm converter at the scanner antenna
connector will I have any problems. My thinking is that the twin-lead
is cheaper and has less loss.

Scott, you better off with a Cb radio than a scanner in your vehicle. Since NJ scanner laws don't allow the scanner in your vehicle. It is also highly doubtful you will be able to tell where traffic jams etc are A CB will be your best and cheapest bet.

How can that be George, the AntennaWarehouse shill?

AntennaWarehouse claims their antenna was made just for them. Who is
telling the truth here? George the Shill or AntennaWarehouse?

Yes, "good" twinlead should have less loss then "poor" coax. Unless the length of cable is very long, you probably will not see much difference. The twinlead may be a little more susceptible to pick of interfering signals.

I know what you are saying Dave but isn't it a bit deceptive when I
sell my wet string with 12 db of gain comparing it to a rock.

AntennaWarehouse is preying on the uninformed with their lies and
deception. Grove on the other hand will answer your questions and I
have yet to see them advertise deceptively about their products.

Guess it's the difference between a guy with the correct background
(Grove) and one just scamming people (Tim at AntennaWarehouse).

Yes, buyer beware with AntennaWarehouse!

They don't make anything. They sell products with deceptive
descriptions and out right lies. Tell the truth George.

> I guess I wanted people to know that the
> ScannerBeam in the photo came from Antenna Warehouse. Most people would associate that
> antenna with Grove. I just didn't want people to think I using Groves over priced
> Scanner Beam. I just didn't want any confusion regarding my thoughts of Grove and
> Grove products. I dont like them!

But you like AntennaWarehouse because they lies about their product?
Is grove known as a liar or for deceptive ads? Nope, just
AntennaWarehouse. Ever heard of a discone with 7 db gain? Only at
AntennaWarehouse will you see that lie.

Why does AntennaWarehouse refuse to disclose which antennas costing
many times more it test it's scanner beam against? Why does GEORGE
continue to perpetuate this lie? You say you know the names of the
antenna but you can't say because the names were E-mailed to you by
AntennaWarehouse and you can't disclose the E-mail.

You seem to be a shill for Antenna Warehouse George. You don't know
antennas , made obvious when you earlier compared your discone to a
beam as proof of performance. A shill George. A liar and a shill.

Randy

Sounds good but keep in mind the 300 ohm twin lead can't get near
metal and will be affected by rain, snow and ice.

But the answer is, when done properly your thinking is correct, lower
loss and cheaper.

OTOH, RG-6 triple shield is so cheap why would you put yourself
through the trouble?

Channel Master the TV antenna MFG sells the same(?) antenna (looks
like it anyway) with 50 feet of rg-6. I think coax is really the best
way to go.

# 1632. FS: sma-to-bnc custom fit antenna adapters

Newsgroup: rec.radio.scanner
Date: 2001-11-05 01:18:55 UTC
From: gulyas@netzero.net
Message-ID: <f002a6a1.0111041718.5eda4057@posting.google.com>
Source record: 57583
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.swap,rec.radio.scanner

Do you have a need for a high-quality SMA-TO-BNC antenna adapter that is custom made to fit and protect your H.T. or scanner radio?

Adapter allows you to:
Quickly change antennas to base,mobile or different style use.
Use the more popular and wider selection available of BNC antennas.
Prevent chassis connector wear or from coming loose due to antenna changes.

Adapter features:
Gold plated contacts with a teflon insulator.
A low profile design with a rubber covering for a factory antenna look.
The rubber base seals to the top of the radio with no spacers needed for moisture and dirt protection.
The base also provides an excellent support for any length of antenna or application.
No need to remove adapter once installed to make a quick and safe antenna change.

Sizes to fit radio models:
Yaesu: VX-5, VX-1, FT-50-R, VX-10, VX-150, VX-110, VXA-100, VXA-120
Icom: IC-T8A, IC-T81A, IC-Q7A, IC-R2
Kenwood: TH-D7, TH-G71, TH-F6A
Alinco: DJ-V5
Standard: C508A, C510A
Radio Shack: HTX-200, HTX-400, HTX-245
Aor: AR-16

Previewed in the May 2000 Issue of CQ Magazine, and the Nov. 2000 Issue of QST Magazine.

$11.95 + $1.50 S+H(One to unlimited)
(Check or money order only in U.S.Funds)
(Specify radio model when ordering)

Frequencies, but callsigns and liscence status? Mobile, Base, and quantity
authorized. These details are clearly from liscence data, so who has access
to FAA liscencing data and provides this for Police Call.

The FCC

Unless they changed it very recently, it is not illegal to have a scanner in your car in NJ. It is only illegal to use it in connection with a crime (monitoring to evade police when fleeing from a crime, etc.).

Hi Vicki,

If you are looking for a good used inexpensive radar detector, I have one for sale on my used equipment page.

http://www.swssec.com/used.html

Not really sure what you are after, whether you need a unit or are just looking for information on current units.

You may or may not know about Radio Shack units being bought, used, then returned. Guys would buy one, use it on a single cross country trip, then return it to the local Radio Shack at their destination. The local Radio Shack would give him a refund, and he had the use of the thing for free for his trip.

That certainly is the cheapest way to get a decent radar detector, but not honest.

Regards ... Steve

I never made any claims regarding the antenna other than what I personally have witnessed. I
have a Discone and I clearly stated that it is a better antenna than a Discone.

Go back to your "tacoma.politics" newsgroup, I hear they love you there....

This seems to be the popular concensus around here as well. WinXP has
been less than stable, has had issues with basic hardware, and the
overall interface is a nightmare to navigate. Windows 2000 is still a
solid choice if you really need to run Windows.

FAA frequency assignments can be found on avaition maps available at any pilot shop. There are VFR low altitude and Terminal Control Area maps that contain tower, ground, approach, departure, etc. There are high altitude sectional maps that contain ATC freqs, among others. I like the VFR low altitude maps the best because they contain ground features, obstruction information, etc. Antenna towers are clearly marked with their heights, locations, etc. Check your local pilot shop.

Also, check out the NOTAM (NOtice To AirMen) section of the FAA web site for up to date changes and information.

I think the power control stuff is in the 150-250KHZ range, that is slightly below the Longwave Broadcast band. I've heard my controller transmit before, but am not sure exactly where.

I don't know anything about the Xcam wireless stuff; it probably is up in the high MHZ to low GHZ.

Wow George, a beam receives better than a discone. Was it a
AntennaWarehouse 7db gain discone? Huh?

Snipped away lots again George the AntennaWarehouse shill. Why is
that? You make claims for AntennaWarehouse and then just like them,
you can't back them up. Why is that George?

> Go back to your "tacoma.politics" newsgroup, I hear they love you there....

Have some good friends there George but so what???

What does that have to do with you being a shill for AntennaWarehouse
George? If I was Osama himself it would not change the fact that
AntennaWarehouse is untruthful about the products they sell. If I was
the leader of Saddam himself it wouldn't change the fact that you have
acted as a shill and perpetuated the lies AntennaWarehouse uses to
sell their goods to unsuspecting scanner novices.

Which antennas were tested against the beam George. You say you know
yet you won't post them. Why is that if you aren't a liar George? I
have asked you this a number of times but for some reason you snip it
out of your replies. Why is that George? Why do you say things you
can't back up?

You made the claims George. You going to be a man and back them up or
just be a silent low life liar again?

I snip you the words which are useless and just consume bandwidth making it easier for others to
read.

I did back up the only claim I made. I claimed it to do better than a Discone, the only claim I
made and the only claim I needed to backup.

don't now where you get the "shill for Antennawarehouse" stuff from. I don't even know what you
mean by that..... If you think I work for them or something to that effect than you are wrong.
It's just that I have a STRONG dislike for Grove Enterprises........

Unless you have something to add to the value of this thread "MilAir band gain antenna suggestions"
please don't post as it will be considered spam and reported as such. A "hate thread" for AntennaWarehouse is far from the topic being discussed.

Try doing a frequency search around 850 to 870 Mhz and 935 to 940 Mhz
for the buzzsaw. However If your target system is digital voice you
will hear a pumping-buzzsaw sound coming up on all the trunking system's
frequencies.
You may also be out of range of the system. They get out on 800 Mhzs
about 15 to 25 miles.
Also the control channel frequency may be missing or has changed another
reasion
to do a search. Check <http:www.trunktracker.com> they may have updates
on the system.

Confirmation means you are 100% sure about who is using the frequency and about it's callsign and other info.

Column "F" is for status. I use (I)Inactive (A)Active (N)Noise/Data (A/W)Active but weak

Source is (S)Scanner seek (R)Record;Police Call (SS)Super Seek;Seek FULL spectrum (FC)FCC (W) Web

Frequencies are color coded. New unidentified=light gray Confirmed=Green Hot=Red Potential=Orange Crap=Puke green Moderately information=Blue

I also "left align" crap frequencies so I know that frequency is crap when looking for new ones, and I can scan ONLY good FQs when reading my list. I also have subset sheets which contain only confirmed frequencies of a certain type; For example confirmed Police only. My master list contains EVERYTHING I have ever found, junk, gems and ghosts.

How are they caught though? Radios broadcast identifiable serial numbers
when they transmit? FCC can read this data and find the owner of the radio?
Maybe they can locate transmitions with GPS equiped devices?? What does the
FCC have up it's sleeve?

VR-5000 for $835.00.

It is an '04' euro model unblocked.

DSP unit is installed.

SO-239 connector has been upgraded to an N-type connector.

FM discriminator has a seperate tap on the back of the radio that accepts a
1/8" mini plug.

Unit is in A+ condition. All original packaging w/ user and service guides.

reply by email if interested

Thanks,
Dean

Can't back what you say...be truthful for once George.
>
> I did back up the only claim I made. I claimed it to do better than a Discone, the only claim I
> made and the only claim I needed to backup.

You said "Glenn, I didn't have to ask him, when I was asking about
various antennas Tim emailed me telling me which high priced Log they
compared it to."

You know that is a lie George. Neither you or AntennaWarehouse will
post the names of these antennas. Why is that George? Why are you
afraid of posting this information. You have now snipped this question
from your replies four times George. What are you hiding there George?
Mane those beams George and show you possess some integrity.

> don't now where you get the "shill for Antennawarehouse" stuff from. I don't even know what you
> mean by that..... If you think I work for them or something to that effect than you are wrong.

Try www.dictionary.com

> It's just that I have a STRONG dislike for Grove Enterprises.....

Ohhh, so you dislike Grove so much you will lie for AntennWarehouse.
Doesn't matter if AntennaWarehouse is deceptive and makes false
claims, you hate Grove. Great technical logic.

> Unless you have something to add to the value of this thread "MilAir band gain antenna suggestions"
> please don't post as it will be considered spam and reported as such.

1. Learn what spam is so you don't look stupid.
2. AntennaWarehouse and their deceptive practices have LOTS to do with this thread.
3. You are certainly desperate defending AntennaWarehouse's deceptive advertising.
4. Be honest.

> A "hate thread" for
> AntennaWarehouse is far from the topic being discussed.

No, it's don't buy a milAir band antenna from AntennaWarehouse because of their deceptive claims. You are the person with the hate, anger and integrity problem George. Because you hate Grove doesn't mean my feelings toward AntennaWarehouse are the same.

BTW, you never answered if your discone was an AntennaWarehouse Discone with 7db of gain?

Uhmmm........ 40 times .10 is $4.00.

Print on both sides of the page.

Now it's 20 pages.

Use a program like fine print and print 2 pages on each side.

Now it's down to 10 pages.

Oh, if it's costing you 10 cents a page you have a problem.

Hey, all you are offering is a convenience, nothing else.

Good luck.

6v 500ma for radio.
6v 800ma - 1000ma to run the TV.
battery pig? If you'r using alkalines, or low capacity nicads, then they will die fast. Personally, I have a Li-Ion battery in mine, and it runs the r3 for anywhere from 4 - 8 hours per charge, depending on how much is received. Can get upwards of 12+ hours if nothing at all is received, just dead silence on stand-by. With the TV I get 2.5 hours run time, which is typical for many portable TV's that size on alkalines.

>The adapter supplied is not strong enough to run the fn radio.

Mine only goes out when I put the TV on, with the wall wort plugged in.

>Grove said do not get a different one as it will burn the radio up. Still
>others have said its ok.
>
>Can you tell me what will work so I can use this darn thing with an adapter.
>Thanks

uh just go to Rad Shack, and pick one up if you want to use the TV, and show then the plug on the ic-r3, and also tell them the voltage and current I said before. Otherwise if you're not using the TV, then the one that came with the ic-r3 should be just fine.

I think the Crystal Set Society would disagree with that statement ;)

Sure, if you want really good selectivity and sensitivity, it'll take
more than an oatmeal box, some wire and a diode, but some of the
things that people have done to improve the basic crystal set, and to
expand upon its capabilties are pretty impressive, if generally very
simple in practice.

I know, I was just being sarcastic. Many would argue the
big hole in US intelligence has been caused by too much
concentration on the "technology" and too few "feet on
the ground". (e.g. echelon collects one hell of a lot of data,
but without brains to process it, it's only good post-facto).

>And you would
>be surprised how much is contracted out for the
>CIA and NSA. There is not that much that is done
>in house these days. Same for the military.

People are expensive and harder to justify on budgets
than equipment, I think that's always been the problem.
Anyway, one useful effect of the recent tragedies has
been that the completely irrelevant issue of "Star Wars
Defence" has been consigned to "File 13".

Very interesting idea you have there, but please explain to me then how the Window/Door units send these signals through your home electrical lines, when they operate on a 9-Volt battery? I used to own one of these systems, and trust me, they use RADIO SIGNALS. Explain how the remote control that came with the unit I used own communicates with base unit... Be a pretty useless remote, if you had to plug the thing into an electrical outlet to use it... Better luck next time...

>
> So it's okay for other people, not near the targets, to starve?

Again, these people face starvation anyway, regardless of where in the
country they were. However, since they have distanced themselves from the
enemy they have a lot better chance of being fed and surviving the winter
than if they stayed in Kabul...

>Is the CHP still actively using 42.12 mhz? I haven't heard them
>here in Kansas for 2 years

Yes.

Here in the upstate of S.C., I occasionally log Sacremento comm center using 42.12 (tone of 179.9 Hz.), and Santa Fe Springs (Los Angelos) using 42.12 (tone of 192.8 Hz.)

The Dupont office has also been noted on 42.12 MHz. / 118.8 Hz.

My local S.C. Highway Patrol dispatch - in Chester - has remained on its alternate dispatch channel for awhile (42.26 / carrier squelch) due to the "skip" from Missouri and California.

>I've been hearing occasionally at around 8 PM on weekdays a callsign of
>"Speedbird" on JFK departure frequencies, then to NY ARTCC frequencies. The
>pilot has a British accent...is this the Concorde?

Speedbird is the generic callsign for all British Airways flights. The
BA176 New York-Heathrow flight (B747) would use Speedbird 176

The revised Concorde NY schedule due later this week is according to BA:

Departs Arrives
BA001 LHR-JFK 10.30 09.25
BA002 JFK-LHR 12.15 21.10

Concord callsigns usually include "Concorde" so "Speedbird Concorde 1"
is likely to be heard.

I think two-way conversations are said to use duplex frequencies? Is that correct? Are there any formulas for figuring out what that other frequency would be? I recall reading somewhere they are determined by formulas, and that different frequency ranges use diff. ratios? Different band allocations are spaced at varying distances, so that would make sense.

Is this true?

Bill,
Did Grove misrepresent what they sold you? Did Grove lie about
the their product? Did Grove try and say they have a discone with 7db
gain? Did you ask Grove a technical question about a product and they
refused to answer it? Have you seen Grove post misleading ads on this
newsgroup?

I haven't always agreed with Bob Grove's editorial comments but I have
yet to see them sell a product using dishonest practices.

AntennaWarehouse and their shill GeorgeF do it all the time.

Buyer beware!!!!!!!!

Hey guys, if you can stop your bashing for a minute there is an excellent antenna on Ebay right now for VHF and UHF air band freaks. Item #1293736487, I have one and it works wonders over a discone for both air bands. New price is over $1600 and these are new!

## 1685. Speech/Frequency inversion descrambling

Newsgroup: rec.radio.scanner
Date: 2001-11-05 15:59:43 UTC
From: ctpds49@aol.com
Message-ID: <20011105105943.28634.00003205@mb-cg.aol.com>
Source record: 57536

Speech Inversion is accomplished by mixing the speech spectrum
(typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some
audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz
constituting the speech inversion.

I just checked the mode set and it does appear to be a non functioning field,

I hadn't tried to alter modes via the software, just mainly use it to edit
alpha tags and save configurations.
Fixing the inoperative field most likely will exceed my abilities at
programing, but I'll open it up and see if there's anything obvious that can
be done.

Good question; it depends how it's settled. Of course,
it also depends ho much the country is depopulated in
the meantime.

> people like you bitch and complain but offer no alternative solution other
> than bending over. i find that deplorable.

The alternative I've offered is to try to make sure that people
don't starve to death, and work for civil rights in the country,
rather than walk away from it as the US did a decade ago. If
you call that bending over, so be it. I call it trying to take
constructive (rather than destructive) action.

Hmmmmmm fishy, I have this pdf file. (and the manual on paper)
Page 41 - of - 72 doesn't say that anywhere??????

I does say...

---

6. Press SCAN, then SRC to begin searching for the trunk's data channel and
scan conventional frequencies at the same time.

---

(see number 6 at the bottom of the page)

It then says...

---

As the scanner looks through the frequencies, you see them on the display.
When the scanner finds the controlling data channel, the scanner begins
trunking.

---

Though I've never seen it trunk... but I don't know if I have any trunking
systems in my city. I tend to hear both sides of almost all conversations.
The ones I don't seem to be out of range. (weak in weak static).

Source record: 57453

Please explain the switch for the battery on the PRO-91. The radio uses eight regular size AA batteries. If you use nicads you put the switch one way and if you use alkaline batteries you put the switch another way. Is this because the alkaline batteries have a little more power than nicads and the switch reduces the power going to the radio? Or, is it so you don't try to recharge the alkaline batteries by mistake? And, does the switch really matter?

Bill

Chris:

well i agree with what you just said, sorry if i took it otherwise. i think its pretty safe to say we have to kill off the hard-line taliban and their leaders or their attacks will continue in many countries (al quaeda is spread out). i feel we have been very careful about killing civilians. unfortunately part of this 'new kind of war' is fighting cowards that use masques and shopping areas to store weapons.

i also agree with you that we should not walk away and neither should the rest of the world. it will be easier to help feed afghans once the military threat has been neutralized. afghanistan needs to become a part of the world 'economy' in some way other than drug trade and have a fair and stable leadership that will prevent them from facing mass starvation.

i feel its going to be a particularly bad winter for the taliban... its pretty cold without a fire and they are highly vulnerable to satellite because of heat and other emissions. i sure as hell wouldn't want to be in any cave. the taliban are bs artists who speak of the 'black eye' they gave the russians without mentioning the 1.3 million lives lost.

phil

Please help. I own the BC 220xlt and it does not go to these Frequencies 398.605 up to 399.030. Is there a way to adjust the unit. Thanks for the time.

Mike

# 1706. Re: X10 Frequencies

Newsgroup: rec.radio.scanner
Date: 2001-11-05 23:08:42 UTC
From: Dick Hertz <dick.hertz@tip.com>
Message-ID: <05112001170842604 1%dick.hertz@tip.com>
Source record: 57458

Once again, the frequency that the X-10 wireless remotes work on is 310MHz. The 2.4 Gig is the freq that the wireless cameras transmit video on. The control signals to turn on and off lights, cameras, etc. via the wireless remotes operate at 310MHz.

In article <3be6e0d4.1129531340@news3.ibm.net>, Joe Cacciatore <jocatch@attglobal.net> wrote:

# 1707. Dumb newbie question: Scanner antenna usage for a SWR meter

Newsgroup: rec.radio.scanner
Date: 2001-11-05 23:17:31 UTC
From: ezchair@home.com
Message-ID: <3be71c88.2410597@news-server>
Source record: 57459

I know you guys get tired of these dumb questions, but..

I have a nice SWR meter that was given to me. I know how it works for transmission usage, but does it have any use at all for my scanner antennas (discone and yagi project antenna).

Source record: 57463

NOw this is what I found on the Radio Shack website about the Pro 94. Maybe I am lloking at the wrong model number or sumthing. This model is on sale..... 149 instead of 249

PRO-94 1000-Channel Handheld Trunking Scanner
(200-0524) Trunking Operation Faxback Doc. # 57987

The PRO-94 scanner tracks transmissions that use the Motorola Type I, Type II, hybrid, and Ericsson EDACS analog trunking Systems. Remember these important points when tracking transmissions:

Your scanner cannot scan trunked system and conventional frequencies at the same time.

The frequencies for many of the 800 MHz, 900 MHz, and EDACS public safety systems are listed in the separate "National Public Safety Trunked System Frequency Guide" included with your PRO-94.

Professional monitors.
Government and military.
Serious Hams.

If the antenna can't catch it the best receiver in the world can't
detect it.

If you have ever seen a photo of a serious monitoring station you will
notice one thing over all others - Serious antennas.

Dave Holford
Who wishes that he could afford some "serious antennas" but has to make
do with 'conumer' and home brew ones.

you can get at least 3 free ones: freetracker, pc895, and airscan. the
first two are windows only the last will run on a low end machine (8086)

there was low cost one i ran into, but it wouldn't run on win2k and i got
no response back from the author on any kind of update...and of course,
long since forgot the name :)

I've heard occasionally chit chat between pilots and also tankers.. that's kind of ok. My girl hates it. Most of the time, at least here in NYC it's boring. Just giving coordinates over the air and such. Plus I might listen all day [I have several scanners] and hear just a few transmissions.

Not really.. Since you probably aren't licenced to transmit in those ranges,
that method of checking antenna impedance is pretty much closed to you.
A noise bridge would work, but they are a little tricky to operate.

You will need equipment to safely handle SMD components, a steady hand, and if possible a stereomicroscope.

>Does anyone have a procedure for doing so?

Sure.

1. Obtain an AR8200 manufactured for sale outside the United States.
2. Carefully remove the microprocessors from your US unit and from your non-US unit.
3. Install the non-US microprocessor in the US unit.

www.radioworld.ca is advertising in November Monitoring Times (p. 69)
that for $700 U.S. they'll guarantee delivery of an unblocked model to
the USA and I've seen similar ads from other retailers in Canada and
Finland.

Of course, the FCC doesn't allow the sale of "cut diode 53 and insert
diode 42 to unblock" type blocked receivers anymore.

The government would pay it.

Doesn't mean it is anywhere near that in value.

All it is, is a dipole. Well two dipoles.

No gain.

But on VHF/UHF height and low loss coax works wonders with a vertical dipole. After all, they were intended for local reception, not transatlantic communications.

This particular dual band air antenna is is not one if the multi element, high gain models but it works much better than a Diamond D-130 discone on the air bands.

# 1731. Re: PRO-91 Power Question

The switch is bacause your PRO-91 can recharge ni-cads. It can't do
that for regular alkalines. And it does matter, since trying to use
the scanner to recharge alkalines may cause them to overheat, leak or
explode.

I do have one question, though. My PRO-91 only takes 4 batteries.
Does yours really take 8?

> made so far. Put up or shut up, George.

Not once did I state that the AntennaWarehouse Scanner Beam was better than the Grove Scanner Beam. Never did and never will. Why would I? They are the very same antenna. The ONLY point I was making was that the Grove Scanner Beam COSTS $20.00 MORE than the AntennWarehouse Scanner Beam, again why pay $20.00 more for the VERY same antenna.

That was the only point to be made.

George

I wonder why all the Embassies/Government
installations,radio/teletype rooms,sending,and receiving sensitive
information,are in lead shielded rooms,the same type of sheet lead
that separates the patient from the nurses,to protect her from the
X-rays.All our communication gear sends off some EMF.I'll bet the
signatures of all the different devices,would not be hard to tell
apart.Particularly if a
computer database of signatures,could be used to rule out the garbage.
With all the DSP,and a wave-cavities,filters,etc.Listening to any
small piece of the RF pie is beyond me,but not those with the money.
When James Bramford wrote the
"The Puzzle Palace" The NSA was biger than the FBI,and CIA put
together.
I've not had a chance to read Bramford's new book with more insights
into the same topic.But I've a hunch we are listening,decoding,and
archiving more than ever.

All Transmitters have unnique signature/finger print,plus there is the
voice print of the person talking.Some triangulation,will locate the
area in seconds,finding the actual apartment,a little longer.The
transmitter's unique signature,will prove which radio did the deed.The
voice print can pin it to a person.

And if the illegal operation is in the ham bands,some Hams will turn
it into a party,foxhunting the offender.Recording the illegal activity
on tape to be turn over to the FCC.

But is anyone listening?

To hear the news, switch on to tea and almonds

Date: 06/11/2001 from www.smh.com.au

By James Meek in Jabal Saraj, Northern Afghanistan

By the time the B-52 crews flying over us get back to their base in
the Indian ocean, they can watch the smoke and flame from their bombs
on the satellite TV news.

There are a dozen television crews in this little town, about 64
kilometres north of Kabul, to make sure of that.

The only ones in Northern Afghanistan left out of this media war are
the Afghans.

Constantly filmed, photographed and quoted, they live out their days
in a news media void. There is no television; there is virtually no
electricity. There are no newspapers. There are no telephones, mobile
or otherwise, apart from a few satellite phones among the leadership.

There are no computers, and hence no Internet or email.

There are no pundits, analysts or academics.

There are only participants.

It's not quite true to say there is no television.

In Faizabad, three hard days' drive to the north, they do have a TV station, but the lack of electricity makes it difficult to catch.

Viewers leave their TV sets on when they go to bed, hoping to be woken up in the middle of the night when the box jolts into life.

No matter what time it is, they'll rub their eyes and watch it, but audience penetration is low. Watching the donkeys go by gets a higher viewer rating.

Afghans are avid listeners to the BBC World Service and Iranian radio.

There are also a couple of brief local news bulletins put out in the Jabal area in the morning and evening.

There is a weekly newsletter, but I've seen someone reading it only once and I have never seen it on sale.

Which leaves green tea and sugared almonds as the main news medium. Generals, journalists, travellers and gossips convene around tea and almonds.

There is no question of calling anyone up to arrange a meeting.

From the point of view of doing business, you might as well be in 17th-century London, when men like Samuel Pepys, without phones and with a loose sense of time, would simply loiter and inquire in the places where the people they needed to see were likely to be.

What in other places would be a quick phone call becomes a commitment to a possibly futile journey lasting several hours. If you turn up at General Almaz's house in Charikar in the late morning, you are likely to be invited to a banquet, but will he tell you anything of interest? If you seek General Basir in the Salang valley and catch him in, you're sure of some forthright comments, but you may be obliged to eat more rice and lentil porridge than you wanted.

I spent five fruitless hours on Saturday looking for a general I met at General Almaz's. When we met, he gave me his business card. It had his satellite phone number, his Moscow number, his two mobiles in Tashkent, his home number in Tashkent, his home number in another city in Uzbekistan, his two London mobiles and his German mobile. He wrote in another number, his new satellite phone. I called him. It was the wrong number.

# 1745. Re: Need help from the pros: Monitoring Mil-Air

Newsgroup: rec.radio.scanner
Date: 2001-11-06 07:23:50 UTC
From: Tim <nightwatch01@home.com>
Message-ID: <3BE78FC4.9F1F33C0@home.com>
Source record: 57496

The 'entertainment value' of what you hear is directly related to what freqs you have programmed in to the scanner. If you have freqs assigned for 'boring' ops in the scanner, you will hear 'boring' things.

Interest & entertainment are relative, but I strongly suggest that your comments are only indicative of what you're hearing with your setup, and NOT a true reflection on the quantity & quality of military aviation communications audible in NYC.

In other words, do a better jon researching what freqs to monitor, maybe improve your receive setup, and methinks you'll hear a lot of pretty cool stuff.

Tim

WOW, I guess my speculations were not so wild after all! I'm still confused
though. If it is soooo easy to locate them, then why does the NYPD have so
many unauthorized transmitions on so many different frequencies?

As a fundamental design feature, and from a purely logical standpoint, the tip of any electrical plug of this type is always the ground-- if it were the "hot" side of the circuit, the more exposed "tip" would be far more likely to short or potentially energize anything it came in contact with.

I know that this is the frequency for America West flights to call back departure times (I used to work there, and know that freq well!). I'm new to scanning, and am using a Radio Shack Pro-43 with a telescoping antenna that I just bought. However, I can only hear the pilots calling back w/ their information, and can't hear the ground ops people respond. FWIW, my office is right across the field from the antenna AWA uses. I can literally see it from my desk. Any ideas on why I can't hear the ground crew?

TIA,
Bill

# 1750. AOR AR-8600

Hello everybody,
I would like ur opinion and critics about AOR AR-8600 base receiver because
I would like to buy it.

Thanks for ur time
Regards

Roberto

Capra, stop wasting your time responding the global village idiot. Ignore him. He hates that.

Adapt-a-Plug tips are quite often (but not always) positive in application, making the collar negative ("ground"). The collar is the more exposed terminal on these types of plugs, so it makes sense to keep it grounded. All of the scanners I have use a positive tip arrangement, but many other devices are just the opposite.

To answer the original question: positive tip does NOT mean positive ground. They are unrelated. Positive tip refers to the polarity of the plug only. In almost all cases, negative grounded systems are used. I think there are only a few exceptions related to vehicle electrical systems...maybe someone else in the group can elaborate on that.

Thank your for one great answer from DougSlug. The rest are pure horsecrap, and you should be ashamed of yourselves. I fell for one of the wrong answers and it blew up my radio. The fire caused me to spill pepsi on my CPU blowing that up as well. Then my mother was trying to email me telling me that she was having a heart attack. She died. THANKS A LOT.

Hi Tim,

I don't disagree that I & E are relative.. fair enough. I wonder what "a lot of pretty cool stuff" means to you. I'm not attacking you, I'm actually just curious. I'm assuming air to air? I'm not aware of any bases or training areas nearby where air to air mock combat occurs or Blue Angels type training occurs. I think that would be nice to listen to. I suspect that if I were living near a base listening might be better, but I don't know.

Believe me, I've searched.. and searched... and researched. At the time I first started hunting around I had an R-7000 Icom Communications Receiver with an antenna at 120 feet in the air with a pre-amp... This was maybe 13 years ago? Not sure exactly. I have now the same radio and also a pro 2006, among other HF, VHF, UHF rigs so I don't know if it's the gear. On quite a few occasions I've posted to this and another newsgroup for someone in NYC or Tri-State to maybe give a few freqs but I have not once gotten a

response. After seeing the generosity of time and knowledge here that the pickings are slim in NYC. I've gotten a few website recommendations with ops freqs.

I'm just wondering, if you don't mind me asking: are you in NY? If you are in the Tri state area maybe you can suggest some freqs to listen to or at least tell me what I am missing out on in your next post so that I can be on the look out for it. I think that'd be really helpful to me and anyone else in my area that is wondering where the "action" is at and what "action" there is to be snagged. I have several freqs in the scanner that I like where I hear air to air chit chat as the pilots pass the time and that's kind of cool. I hear them referred to as Victor #. So... what am I missing in the NY area? Thanks and later.

Buck@roo

Because you have lied about other facts George, why wouldn't you lie
about this?

> They are the
> very same antenna.

Not according to AntennaWarehouse. They say their scanner beam was
made just for them.

> The ONLY point I was making was that the Grove Scanner
